# Solid State Relays 1-Phase with Heatsink and Integrated Fuse Type RGC1F

- 35mm product width
- Solid state contactor with integrated fuse
- AC zero cross switching
- Operational voltage: up to 600 VAC
- Rated load currents of 20 AAC, 30 AAC and 40 AAC
- Control voltage: 4.5 - 32 VDC
- Integrated voltage transient protection with varistor
- Detection of SSR and load malfunction (RGC1FS)
- Alarm output signal (RGC1FS)
- 100 kA short circuit current rating

## Product Description

This solid state contactor includes three functions in one housing: power switching, short circuit protection by semiconductor fuse and system monitoring. RGC1FA is the version including the power-switch and the fuse version with a fuse while the RGC1FS includes also the monitoring function which detects load, fuse and SSR faults.

The front panel can be opened for easy access of the fuse and the fuse holder accepts fuses from a wide range of manufacturers. Alarms (in RGC1FS) are indicated by a red LED on the front and a signal which is normally closed. Product width is 35mm for the whole range and covers up to 600VAC and 40AAC. Specifications stated at 25°C unless specified.

<b>RGC1</b>	F	A: Zero cross switching + fuse + fuse holder  S: Zero cross switching + fuse + fuse holder + system monitoring	23: 230VAC 60: 600VAC	D: 3 or 4.5 - 32VDC	20: 20AAC 30: 30AAC 40: 40AAC	G: Box Clamp	E: Contactor

### Warning

- Risk of electric shock
- Do not open fuse panel when the product is in operation
- Switch off the panel before doing any maintenance on the product. Panel should be closed before restarting operation.
- Failure to follow these instructions may result in serious injury (or worse) and/or equipment damage

### Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- Performance Criteria 1: No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2: During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3: Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

	Normal operation. SSR off	Normal operation. SSR on	Line voltage loss detected without control voltage, i.e. when SSR output is switched off	Line voltage loss detected with control voltage applied, i.e. when SSR output is switched on	Heater break is detected when the control is applied.	All function stops due to loss of power supply.	All function stops due to loss of power supply, even when a control voltage is applied.	If SSR output does not switch ON when control voltage is applied an alarm condition results.	Shorted output is detected even when the control voltage is applied.	Shorted output is detected when the control is not applied. Output would be conducting when it should be in the OFF- state	If fuse blows alarm signal is emitted from OUT terminal and the OPEN FUSE LED will also light up.

### Note:

- Half light intensity Green LED to indicate application of power supply. Full brightness to indicate presence of control input.
- Faults indicated by a continuous lighting RED LED.
- Auto-reset function. The alarm signal turns OFF and SSR proceeds normal operation when alarm condition is no longer present.

## Co-ordination type 1 (UL508)

Part No.	Max. fuse size [A]	Class	Current [kA]	Voltage [VAC]
RGC1F.20	30	J or CC	100	Max. 600 VAC
RGC1F.30	30	J or CC	100	Max. 600 VAC

For UL applications an external Class J fuse shall be installed. Tests with Class J fuses are representative of Class CC fuses.

Suitable for use on a circuit capable of delivering not more than 100,000 Arms symmetrical Amperes, 600 volts maximum when protected by fuses. Tests at 100,000 A were performed with class J fuses, fast acting: please refer to the table above for maximum allowed ampere rating of the fuse. Use fuses only.
