

2A-M

CAPICORDA PER APPLICAZIONI GRAVOSE

per conduttori in rame

File no. E125401

I capicorda della serie 2 A-M sono studiati per impieghi gravosi e per la messa a terra di strutture ed apparecchiature sia in ambienti chiusi che all'esterno.

Sono ricavati da tubo di rame elettrolitico di sezione tale da garantire sia una buona connessione elettrica che un'adeguata resistenza meccanica alla trazione; sono ricotti e protetti superficialmente mediante stagnatura elettrolitica.

Hanno il colletto dimensionato in modo da ricevere più pressate; sono inoltre privi del foro d'ispezione per evitare l'infiltrazione di umidità e di agenti atmosferici e quindi adatti anche per installazioni all'aperto.

Ogni capicorda riporta incisi:

- marchio di fabbrica e numero di catalogo Cembre.
- natura e sezione del conduttore (mm²).
- Ø della vite (mm).

A richiesta possono essere forniti i capicorda della serie 2A-2M con attacco a due fori.
