

Descripción: Shelf to mount air circuit-breakers, fixed or withdrawable version and MCCB's version in cassette. The shelf has ventilation slots to allow air circulation in the section. It can be mounted only if we have internal side panels MSPSxx06 in both sides. Adjustable height position in steps of 25mm. It can not be used with the front covers system, if it is necessary to increase the internal segregation or limit the access, we recommend to use top and bottom shelf and 3 partial doors to separate the incoming, ACB and outgoing subsections.

Material: 2 mm galvanised steel.

Suministro: 1 piece with mounting material.
