

Lamp load contactor, 24 V 50 Hz, 220 V 230 V: 18 A, Contactors for lighting systems

Part no. **DILL18(24V50HZ)**
 Catalog No. **104404**
 Alternate Catalog No. **XTCT018C00U**
 EL-Nummer (Norway) **4134240**

Delivery program

Product range				DILL Lighting contactors																																																																																																								
Application				Contactors for lighting systems																																																																																																								
Utilization category				AC-1: Non-inductive or slightly inductive loads, resistance furnaces																																																																																																								
Rated operational current																																																																																																												
AC-5a																																																																																																												
220 V 230 V	I_e	A		18																																																																																																								
380 V 400 V	I_e	A		18																																																																																																								
AC-5b																																																																																																												
220 V 230 V	I_e	A		21																																																																																																								
380 V 400 V	I_e	A		21																																																																																																								
AC-1																																																																																																												
Conventional free air thermal current, 3 pole, 50 - 60 Hz																																																																																																												
Open																																																																																																												
at 40 °C	$I_{th} = I_e$	A		40																																																																																																								
Contact sequence																																																																																																												
Actuating voltage				24 V 50 Hz

IEC/EN 61439 design verification			
10.2 Strength of materials and parts			
10.2.2 Corrosion resistance			Meets the product standard's requirements.
10.2.3.1 Verification of thermal stability of enclosures			Meets the product standard's requirements.
10.2.3.2 Verification of resistance of insulating materials to normal heat			Meets the product standard's requirements.
10.2.3.3 Verification of resistance of insulating materials to abnormal heat and fire due to internal electric effects			Meets the product standard's requirements.
10.2.4 Resistance to ultra-violet (UV) radiation			Meets the product standard's requirements.
10.2.5 Lifting			Does not apply, since the entire switchgear needs to be evaluated.
10.2.6 Mechanical impact			Does not apply, since the entire switchgear needs to be evaluated.
10.2.7 Inscriptions			Meets the product standard's requirements.
10.3 Degree of protection of ASSEMBLIES			Does not apply, since the entire switchgear needs to be evaluated.
10.4 Clearances and creepage distances			Meets the product standard's requirements.
10.5 Protection against electric shock			Does not apply, since the entire switchgear needs to be evaluated.
10.6 Incorporation of switching devices and components			Does not apply, since the entire switchgear needs to be evaluated.
10.7 Internal electrical circuits and connections			Is the panel builder's responsibility.
10.8 Connections for external conductors			Is the panel builder's responsibility.
10.9 Insulation properties			
10.9.2 Power-frequency electric strength			Is the panel builder's responsibility.
10.9.3 Impulse withstand voltage			Is the panel builder's responsibility.
10.9.4 Testing of enclosures made of insulating material			Is the panel builder's responsibility.
10.10 Temperature rise			The panel builder is responsible for the temperature rise calculation. Eaton will provide heat dissipation data for the devices.
10.11 Short-circuit rating			Is the panel builder's responsibility. The specifications for the switchgear must be observed.
10.12 Electromagnetic compatibility			Is the panel builder's responsibility. The specifications for the switchgear must be observed.
