NX1 Machine Automation Controller
Continue to pursue productivity

The solution in your hand

sysmac
always in control

Improve productivity,
improve your business

The manufacturing industry is under pressure to keep boosting productivity without compromising on quality. Global production and flexible production are required to satisfy diverse consumer needs.
In addition, manufacturers need to control quality and safety to provide the same level of quality and meet rising quality and safety standards.
In order to fulfill these requirements, it is crucial to utilize information, take safety measures, control quality, and at the same time improve production efficiency.

Common isues

Compromise between production efficiency and information utilization/safety measures/quality control

INFORMATION

Production cycle time is increased due to traceability data processing

Full traceability is required to meet high-level quality standards.
As it takes a long time to process all traceability data, the production cycle time increases.

SAFETY

Safety measures make setup and troubleshooting difficult

Separate safety control for machines and lines and separate controllers for machine control and safety are required. Line and machine design is time-consuming, and safety measures have to be redesigned when the layout is changed.

QUALITY

Production lead time is increased due to additional inspections and tight quality control

Adding inspections to maintain quality increases production lead time.
When special machines with built-in PC that collect and process data at high speeds are used for inspections, maintenance becomes difficult. Instead, acceptance sampling is conducted offline.
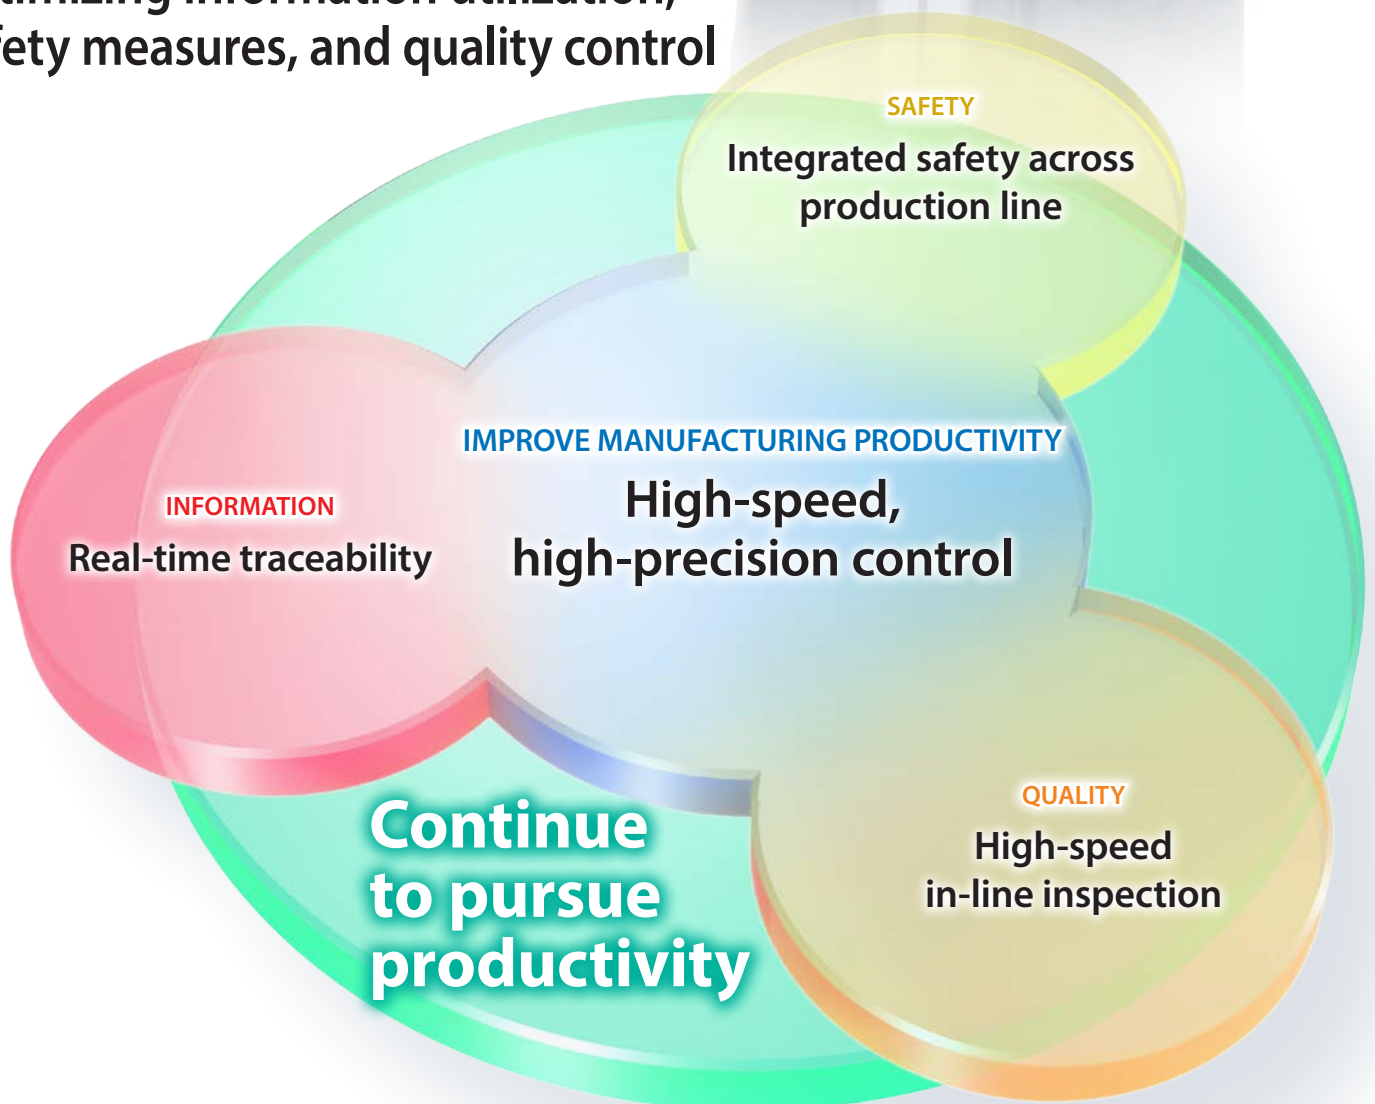

NX1

The Next Standard

NX1

Improves production efficiency while optimizing information utilization, safety measures, and quality control

SAFETY
Integrated safety across production line

IMPROVE MANUFACTURING PRODUCTIVITY
High-speed, high-precision control

INFORMATION
Real-time traceability

QUALITY
High-speed in-line inspection
Continue to pursue productivity

Produce faster without compromising on quality

The NX1 can utilize information, take safety measures, and control quality while at the same time improving production efficiency through high-speed, high-precision control.
This contributes to continuous improvement in productivity.

Real-time traceability

The NX1 provides high-speed control while utilizing information.
For example, the NX1 used for a packaging machine with the capability of handling 1,000 products per minute can collect all traceability data in synchronization with the production cycle while performing motion control.

EtherCAT

CIP Safety

The NX1 is the first in the world* to integrate two different open networks: EtherNet/IP™ for scalable safety control in production lines and EtherCAT® for fast safety control in machines. Furthermore, it integrates safety control into machine control in lines that require fast cycle times.
This integration allows you to standardize machines and build flexible lines.

* Based on Omron investigation in March 2018.

SAFETY

IMPROVE MANUFACTURING PRODUCTIVITY

QUALITY

High-speed in-line inspection

Although special inspection machines with built-in PC are widely used for high-speed inspections, they require special maintenance skills.
Therefore, acceptance sampling is often carried out offline to prevent line stoppages.
The NX1 can be used in conjunction with the High-speed Analog Input Unit to collect measurement data within a fixed cycle time of 5 µs. This standard controller eliminates the need for special machines with PC and can be maintained by on-site engineers. In-line inspections of all products can also be conducted easily.

High-speed in-line inspection of all products with standard inspection machine

Seamless Integration: Production Line & IT sys

The NX1 Controller integrates inputs, logic, outputs, safety, and robotics, offering a wide variety of applications that leverage information to boost productivity and measures for quality and safety.

High-speed, high-precision control: Synchronized within same cycle

The NX1 provides synchronized control of the NX bus connected I/O and motion control network within same system cycle time and jitter below 1 μs. This enables real-time data collection and analysis as well as high-speed, high-precision control.

NX1 brings advanced control in miniaturized

Three industrial Ethernet ports and a power supply are housed in a compact design with a width of 66 mm.
The NX1 provides key functionality to integrate control and information for advanced manufacturing applications.
The new controller contributes to the pursuit of productivity improvements.

Embedded Power Supply

DC power supply without
battery backup

NX bus

Up to 32 local NX I/O units

NX bus connection
* Including single axis position control axes

size

High-speed, high-precision control

Synchronized control of I/O and motion within 1 ms cycle time
Jitter : 1 µs

Memory capacity for variables : 33.5 MB[1]

Secure host connection

OPC UA is an IEC communication protocol which is listed as a recommendation for Industrie 4.0 and PackML. The NX1 comes equipped with an OPC UA server interface and provides a secure connection to IT systems such as MES and ERP.

Enhanced Ethernet functionality

Connectivity to existing devices (e.g., Modbus/TCP[2], FINS communications, and connection to other vendor PLC[3]) and EtherNet/IP™ performance (increased to 12,000 pps[4]) are improved. Packet Filter enhances security, and visualization of EtherCAT® slave errors makes troubleshooting easier.

Multicore microprocessor for control and data handling

The multicore microprocessor enables information utilization including communications and traceability without compromising control performance.

[1]. The total number of bytes of retained and non-retained variables.
[2]. Clients instructions are supported.
[3]. SLMP commands are included in the Sysmac Library.
[4]. The total pps of two ports.

One software to get things done...

Sysmac Studio – Integrated Development Environment integrates programming, configuration, information, and safety.
The project version control system in the Sysmac Studio Team Development Option ensures smooth development across the team. The Sysmac Studio includes Function Blocks for motion control and database connection, and collections of software functional components Sysmac Libraries can be downloaded from our website. These allow you to minimize time to build systems that boost productivity.
