No. 1* in ability to accommodate a range of applications thanks to outstanding ion balance, robust dust resistance, and an extensive nozzle selection

panasonic.net/id/pidsx/global

Optimized discharge needle tip shape for even more stable ion-producing power

The discharge needle tip's spherical shape enables more stable ion production while making it less likely that the shape of the tip will change over time as a result of electrical discharge.

Improved maintenance cycle

Stable ion-producing performance contributes to a longer maintenance cycle, which has been improved to one month or longer* in the ER-VS.

*When used in an operating environment that complies with Panasonic Industrial Device SUNX requirements

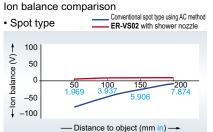

Selection of nozzles for different applications

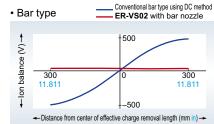

In addition to eight standard nozzle types, including shower and tube nozzles, we offers a range of differently shaped nozzles (including made-to-order models).

Produces excellent ion balance

The adoption of high-frequency AC method allows extremely stable ion balance to be achieved. Because the ion balance is not affected by the pressure of air supplied or by the setup distance, no troublesome adjustments are required after setup.

Charge removal time (typical) Static 1.000 voltage (V) 100 Time 3 4 (sec.) 0 ż

1182

Ultra-compact design accurately removes charges of objects even from narrow spaces

The main unit is merely 109 × 27 × 28 mm 4.291 × 1.063 × 1.102 in, so it can easily be combined with other devices and also be installed as an add-on. Furthermore, the high-voltage power supply is built-in, so no extra space is required except for the ionizer itself.

It can be installed in places where the conventional bar type cannot, so it can be placed closer to the object for more accurate charge removal.

Safe design

A "checking function" and an "abnormal discharge monitoring function" are provided to notify the operator when it is time to clean or replace the discharge needle and to prevent discharge problems from occurring. Each function has an LED display to use for checking. The output from each function can also be used to externally monitor the status of the ionizer during operation.

BASIC PERFORMANCE / MAINTENANCE

The discharge needle can be removed from the rear of

the main unit, so there is no need to remove the nozzle

when replacing the needle. Maintenance is easy even

when the ion air outlet is located close to the object.

Easy discharge needle maintenance

Completely safe design and easy maintenance

Lights up when the discharge needle is worn or dirty (Orange LED) [Checking function] When lit, the discharge needle may be worn or dirty.

Lights up when abnormal discharge is detected (Red LED) Abnormal discharge monitoring function When lit, an abnormal discharge has been detected, e.g. due to a foreign substance, and discharge halted in order to maintain safety.

Low power consumption and low-voltage wiring

The power supply voltage is 24 V DC, and the power consumed is only 70 mA or less. In addition, safety is enhanced because no high-voltage cables are required.

Discharge needle is covered by the nozzle

The discharge needle does not protrude from the main unit, so it cannot be touched by accident. Furthermore, no leaks can occur when it is brought close to metallic objects.

Shower nozzle

FUNCTIONS

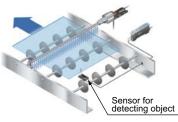

High performance with no controller needed

A full range of functions have been provided with full consideration given to ease of use in the workplace. No separate controller is needed.

Discharge halt input

A signal from an external device can be used to turn discharge ON and OFF. Sensors can be used to detect the objects so that the ion air is generated only when required.

Discharge indicator

The discharge ON/OFF status can be checked using an LED display. This lets you avoid problems such as when the power is on but no discharge is occurring.

POWER

Lights up when the power is ON (Green LED)

DISCHARGE / Lights up during discharge (Green LED)

PRECAUTIONS FOR PROPER USE

This product is designed to remove static electricity for industrial use. It is not intended to be used to prevent accidents, either to humans or properties, or for safety maintenance.

Mounting

- · When this product is mounted in a housing, use M4 screws (please arrange separately).
- If more than 2 units are mounted close together, keep 5 mm 0.197 in or more between them. If used at distances within 5 mm

- 0.197 in, performance may be affected.
- · Ensure sufficient space for daily check and maintenance.
- If AC adapter ER-VAPS1 is used, be sure to connect the ground terminal to the power supply common earth.
- Make sure to ground this product. If the grounding is not proper, charge removal may be impaired. (Direct earth or power supply common earth)
- · If an electrostatically charged object is in contact with or near another object, charge removal may be impaired. Install this product such that ions are blown against the electrostatically charged object, when the object is at a distance from other objects or is floating in mid-air.

Nozzle

- The ionizer main unit cannot be used by itself. Always be sure to attach a nozzle (optional) before use.
 - Never modify the optional nozzle. If the modified nozzle is used, the pressure inside of the nozzle increases, and the check output works as the monitoring function of
- the discharge part is activated. For the details of the optional nozzle, refer to the instruction manual enclosed with the nozzle.
- There are Select the suitable model for your application.
- · Appropriate air pressure for each nozzle should be used.
- To fit the air nozzle, screw it to the product till it stops.

Piping

- The outer diameter of the air tube for the air inlet of this product should be ø6 mm ø0.236 in.
- Make sure that clean air (air containing no water, no oil and no dust) should be supplied.

Wiring

 Make sure that the power supply is off while wiring. Otherwise, there is a danger of electric shock.

- After wiring, reconfirm the wiring connections before switching on the power supply.
- Note, wrong wiring will damage the product.
- Verify that the supply voltage variation is within the rating.
- · Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.

Maintenance

 Always be sure that the power supply and the air supply are both turned off before inspection and cleaning.

- Since the tip of the discharge needle is pointed, take sufficient care when cleaning.
- · The charge removal effect will deteriorate if dirt is stuck to the tip of the discharge needle. If a check signal is output, clean the discharge needle.
- Clean the discharge needle periodically even if no check signal is output.
- The discharge needle's life-time is approximately 20,000 hours.

Please change it after this period has elapsed. Use only discharge needle ER-VANT2 (optional).

- If a check signal is output even after the discharge needle has been cleaned, replace the discharge needle.
- If an error signal is output, it may indicate an abnormal discharge.
- Check the following points:
- ① Make sure that the supply voltage is within the tolerance as per specifications.
- 2 Make sure that the discharge needle unit is mounted correctly on the main unit. Check the tip of the discharge needle for a chip or contamination. If the discharge needle is chipped or dirty, clean it or replace it with a new needle.
- ③ Check that no foreign materials are inside the nozzle, that the nozzle is mounted correctly and that the ionizer is set up correctly.
- ④ Make sure that the ground terminal is connected completely.
- To reset the ionizer after an error signal has been output, input a reset signal.

Procedure for cleaning

- ① Check that the power supply and the air supply are both turned off.
- 2 Remove the discharge needle from the rear of the main unit.
- ③ Remove the dirt on and around the discharge needle with a cotton swab soaked in alcohol.
- ④ Check the discharge needle once more to make sure it is free from foreign particles such as thread scraps.
- (5) After cleaning the discharge needle, mount it.

Replacing the discharge needle

- ① Check that the power supply and the air supply are both turned off.
- ② Remove the discharge needle from the rear of the main unit.
- ③ After checking the there is no contamination on or around the new discharge needle, mount the nozzle.

Refer to p.1595 for general precautions.

PRECAUTIONS FOR PROPER USE

Others

- Only connect an isolated DC power supply, for example one equipped with an isolating transformer, or the optional AC adapter ER-VAPS1 to the product.
- If an auto-transformer, etc. (single winding transformer) is used, this product or the power supply may be damaged due to short-circuit.
- Do not use this product beyond its rated specifications. Doing so can cause product breakdown, non-function, or damage. Furthermore, it will also cause a marked reduction in product life.
- Never disassemble, repair, modify, or misuse this product, as this can cause an accident or malfunction.
- Do not throw this product into fire: it may explode or generate poisonous gas.
- Since high voltage is applied to the discharge needle, keep your fingers, body, metal, e.g. wires or tools, etc., away from the needle. If you fail to keep away from the needle, electric shock or malfunction may be the result.
- This product is not explosion-proof. Do not use it in places where combustible or flammable material is present. There is a danger of catching fire.
- If the power supply is switched on immediately after being switched off, fault output may be generated. After the power supply is switched off, wait at least 1 sec. before switching it on again.

Ambient temperature	+5 to +45 °C +41 to +113 °F			
Material	Main body: Aluminum alloy (Almite processed) Element: Porous, hollow fiber membrane			
Net weight	11 g approx.	18 g approx.		

Note: Maximum processed air volume that the filter performance can be maintained.

Approximately 0.1 MPa of pressure drop occurs with the max. processed air volume.

Piping

<Mounting example of ER-AF20 + ER-VS02>

• Fit the pneumatic fittings on the both sides of this product to connect to the pneumatic tube, as the figure shown above.

Notes: 1) Since this product is made by aluminum alloy, make sure that excessive force is not applied. 2) This product is for removal of solid particles. Remove water, oil, etc., in the primary pressure side.

- Do not use this product in steamy or dusty places, in places where water and oil splash, or where spatter flies when welding.
- Since this product emits ozone into the atmosphere, circulate air to prevent foul smells. If ozone lingers for long periods, metals, etc. may oxidize / decay. Furthermore, do not try to confirm that foul smells are caused by the ozone by drawing your face near the nozzle outlet and air outlet: you may hurt your nose, throat, etc.
- Confirm the wiring and piping state before supplying power or air. Wrong wiring and piping may cause malfunction.
- Do not use this product for any purpose other than charge removal.
- When this product is no longer usable or required, dispose of properly as industrial waste.
- If the air supplied to this product is turned ON/OFF by a solenoid valve, for example, make sure to turn the discharge halt input ON/OFF simultaneously.
- Use air (dry, clean air) for the fluid. Any fluid other than air (dry, clean air) or even air containing corrosive gas may cause an accident or malfunction.
- Do not use air that contains foreign particles, e.g. carbon dust, dust, water or oil. Since these substances may cause electric shock or malfunction, take appropriate countermeasures, e.g. install an airfilter, air-drier, etc.

Cautions

- Before the piping, make sure to sufficiently carry out internal flashing (blowing of compressed air) of the pipe. If scrap or sealing tape, generated during work, or rust, etc., gets inserted, it will cause clogging.
- Use air (dry, clean air) which does not contain water, oil, etc. Water or oil will cause clogging or reduction in performance.
- Do not use with a fluid or in an environment containing the following substances:
 - Organic solvents, Ester phosphate type hydraulic fluid
 Sulfuric acid gas, Chlorine gas, Acids
- This product is for industrial use. Do not use it in
- equipment affecting human life. • Never disassemble or modify this product.
- Never disassemble or modify this product.
- When disposing this product, dispose it as industrial waste.

Pressure drop

Primary air pressure Secondary air pressure

- When the mini line filter (ER-AF10/AF20) is fitted, a pressure drop occurs. Adjust the primary air pressure so that the secondary air pressure is within the air pressure range of the ionizer. (Take are that the air pressure range differs depending on the nozzle. Furthermore, in case the filter is used with the max. processed air volume, approximately 0.1 MPa of pressure drop occurs.)
- Take care that if the air more than the specified processed air volume is applied, the efficiency will deteriorate.
