Micro-differential Pressure High-precision Digital Pressure Sensor For Gas

ERIES

High accuracy & resolution

High accuracy and resolution

Due to differential pressure sensing, the pressure can be set with a high resolution of 0.01 kPa.D {1 mmH2O.D} over a pressure range of 0 to 2.00 kPa.D {0 to 204 mmH2O.D} and, moreover, the detection accuracy is within ±1 % F.S.

Setting resolution

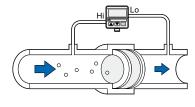

0.01 kPa.D {1 mmH2O.D}

Repeatability

Within ±1 % F.S.

Detecting clogging of filter

The clogging of a filter can be reliably detected by the differential pressure, indicating the time for filter replacement.

FUNCTIONS

Bright display and easy key operation

Three bright red 7-segment LEDs, 12 mm 0.472 in high, are incorporated in the compact body. They can be clearly read not only in a dark place, but also, in a welllit place. Further, initialization or pressure settings can be easily done with key operation while looking at the display.

Pressure unit selectable

The pressure unit can be selected from "kPa" and "mmH2O" according to your requirement. Further, during measurement, the pressure unit can be recognized at a glance from the pressure unit indicator.

kPa mmH₂O

When the pressure unit is changed, threshold values and the measured pressure value are automatically converted.

Versatile control with two output modes

1 Hysteresis mode

The lower threshold value and the upper threshold value establish the hysteresis of the comparative output.

2 Window comparator mode

The comparative outputs can be made ON or OFF by a pressure within the limits set by the upper and the lower threshold levels.

VARIETIES

Analog current output type: DP-M2A

DP-M2A is incorporated also with the analog current output (4 to 20 mA). Hence, it is ideally suited for real time monitoring and multi-point control in combination with an analog controller (ultra-compact digital panel controller CA2 series).

PRECAUTIONS FOR PROPER USE

· Never use this product as a sensing device for personnel protection.

 In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

The **DP-M** series is designed for use with non-corrosive gas. It cannot be used for liquid or corrosive gas.

Mounting

- The displayed value may vary by 1 digit (0.01 kPa.D {1 mmH₂O.D}) maximum depending on whether the sensor is installed vertically or horizontally.
- · A sensor mounting bracket MS-PE-1 (optional) may be used. When mounting the sensor with the sensor

mounting bracket, the tightening torque should be 0.5 N·m or less

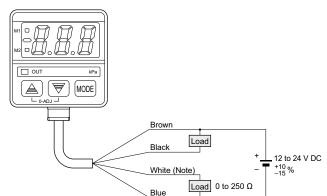

Conditions in use for CE conformity

• The **DP-M** series is a CE conformity product complying with EMC Directive. The harmonized standard with regard to immunity that applies to this product is EN 61000-6-2 and the following condition must be met to conform to that standard.

Conditions

- The sensor should be connected less than 10 m 32.808 ft from the power supply.
- · The signal line to connect with this sensor should be less than 30 m 98.425 ft.

Wiring diagram

Note: The white lead wire is equipped only with the DP-M2A

Refer to p.1566 for general precautions.

Operation

- · If setting is impossible even with pressing the MODE key, verify whether the key-protect function is enabled. Please note that pressing down on the MODE key for an extended moment (for 4 sec. or more) will enable the key-protect function as soon as the key is released. The key-protect function is set when the display shows and is released when the display shows **[]FF**
- · If using the window comparator mode, lower threshold value (M1) and upper threshold value (M2) should be set with a difference of 3 digits (0.03 kPa.D {3 mmH₂O.D}) or more. No output will be possible with a 0 to 2 digits difference.

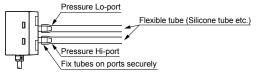

Piping

· Apply higher pressure to the Hi-port and lower pressure to the Lo-port.

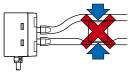

· Use flexible tubes (silicone tube etc.) that can fit the pressure ports, ø4.6 mm ø0.181 in in diameter. The tubes should cover more than half the length of the pressure ports.

Recommended tube

 TYGON[®] tube R-3603, size: internal dia 4 mm 0.157 in, external dia 6 mm 0.236 in, manufactured by Saint-Gobain K. K. Contact the manufacturer for details of the recommended product.

- Notes: 1) TYGON is registered trademarks of Saint-Gobain K. K. Ensure that excessive pressure is not applied to the pressure
 - ports. Since this sensor is designed for detecting small pressures, if excessive pressure or shock is applied to the pressure ports, the diaphragm (pressure sensing device) in the sensor may get damaged.
 - Please do not compress the tube. If the tube is compressed. pressure exceeding the rated value may be generated, damaging the diaphragm (pressure sensing device)

MACHINE VISION SYSTEMS UV CURING SYSTEMS	6	Increment key (()	 The settable digit is shifted cyclically at every press of the key during the initial setting mode. Pressing the key increases the set value, in the upper and lower threshold value setting mode. 	During the sensing mode, pressing both switches	
Selection Guide Pressure/ Digital Display Pressure/ Head-separated	0	Decrement key ((♥)	 The set condition changes at every press of the key during the initial setting mode. Pressing the key decreases the set value, in the upper and lower threshold value setting mode. 	calibrates the sensor into atmospheric zero.	
Flow DP-0 DP-100 DP-M	8	Mode selection key (()	 Three modes, the sensing mode, the lower threshold value (M1) setting mode, and the upper threshold value (M2) setting mode, are cyclically selected at every press of the key. During the sensing mode, pressing the key for 4 sec., or more, can make the key protection either effective or ineffective. Holding the increment key () and simultaneously pressing the mode selection key brings the sensor from the sensing mode to the initial setting mode. 		
	9	Pressure Lo-port	Lower pressure should be applied.		
Pressure Hi-port Higher pressure should be appled		Higher pressure should be applied	d.		

Output mode and output operation

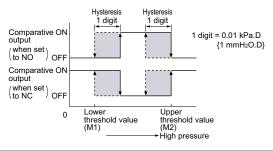

Hysteresis mode (H) (M1 < M2)

• The lower threshold value and the upper threshold value establish the hysteresis of the comparative output.

Window comparator mode ($\begin{bmatrix} L \\ L \end{bmatrix}$) (M1 < M2)

· The comparative outputs can be made ON or OFF by a pressure within the limits set by the upper and the lower threshold levels.

 When operating in window comparator mode (lower threshold value (M1) and upper threshold value (M2) should be set with a difference of 3 digits (0.03 kPa.D {3 mmH2O.D}) or more.

Others

- · Use within the rated pressure range.
- Do not apply pressure exceeding the pressure withstandability value. The diaphragm will get damaged and correct operation shall not be maintained.
- Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
- Do not insert wires, etc., into the pressure port. The diaphragm will get damaged and correct operation shall not be maintained.
- · Do not operate the keys with pointed or sharp objects.

The CAD data can be downloaded from our website.
