This component is part of the CMS (Circuit Monitoring Systems) family. CMS components are made to measure the final circuits (branches) of installations. Each monitoring system consists of a Control Unit and sensors with different measurement ranges and mounting possibilities. Up to 2 x 32 sensors can be connected to each CMS-600 Control Unit. 247 identifiers can be set on the device. Thereby it is possible to acquire thousands of measurement points over one bus line. This means the CMS-600 can be used as a highly-efficient-measurement system, even in very large, extensively networked installations. The user can get access to the data via an integrated touch-display or remotely by a RS485 Modbus interface.
