Safety Photoelectric Switch**E3FS-Family**

**Safety Design for Category 2.
Suitable for Detecting Human Bodies in Hazardous Area.**

Main features

- The E3FS is a Type 2 Safety Single Beam intended to be used with the control unit F3SP-U1P-TGR for the control system of a machine to category 2, 1 or B as defined in the European standard EN 954-1.
- Compliance with Machinery directive: No. 98/37/EC, EMC Directive: No. 89/336/EEC, EN 61496-1 (06/98) (Type 2 ESPE), and IEC61496-2 (1997) (Type 2 Active Optoelectronic Protection device).
- Approved by TÜV Product Service (Notified Body) as Type 2 ESPE (Electro-Sensitive-Protective-Equipment), Type 2 AOPD (Active Optoelectronic Protection device) and CE marking.
- Pursuing safety with high level of safety design and FMEA.
- System configuration of up to four units is possible.
- With the control unit F3SP-U1P-TGR, two different muting functions can be selected for each set of E3FS separately.
- Compact and space-saving (M18 DIN-sized threaded cylindrical housing, axial type)
- Housing materials: plastic and nickel brass
- Connection: Pre-wired and M12 plug
- High enclosure ratings (IP67)
- Sensing distance 10m

Remarks to enclosure ratings:

The enclosure ratings IP67 of OMRON internal standard correspond to a higher test requirements than the official standard IEC 60 529 :

- ◆ The sensors rated IP67 have special enclosure protection. In this case, the sensors have passed the OMRON-internal heat shock test (see below) before the IP67-test of IEC 60 529 (1m water height for 1 hour). Afterwards the sensors have been tested according to the OMRON-internal waterproof-test (see below).

heat shock:

Alternating, fast temperature changes between -25°C and +55°C are executed for 5 cycles and 1 hour for each temperature. Functioning and isolation is checked afterwards.

water proof:

After the heat shock test, the sensors are exposed alternating under water of +2°C and +55°C executing 20 cycles and 1 hour for each temperature. Functioning, water tightness and electrical isolation is checked afterwards.

Precautions on Safety

WARNING	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
	Indicates prohibited actions.

WARNING	
	When the E3FS is used without a safety control unit, do not use the E3FS as a safety device nor a part of safety systems for ensuring safety of persons.

When the E3FS is used without a safety control unit like the F3SP-U1P-TGR, it is in accordance with the requirements of the safety related control system to category B as defined in the European standard EN954-1.

The E3FS is in accordance with the requirements of the safety related control system to category 2 only when it is connected with a specified control unit.

E3FS-10B (PNP) : Type F3SP-U1P-TGR safety control unit must be used.

The F3SP-U1P-TGR executes a periodic test every 27 ms.

E3FS-10C (NPN) : Please ask OMRON about requirements for a specified control unit.

WARNING
Make sure that personnel operating the E3FS are knowledgeable about the machine on which it is installed. Read this manual and the control unit manual completely. Be sure the information provided is understood before attempting to operate the E3FS.
Plural E3FSs must be sufficiently far from each other to avoid mutual interference.
Regarding the calculation of the safety distance, obey the control unit manual and/or related standards, e.g. EN999 when the E3FS is used as a safety device.
Regarding the avoidance of malfunction caused by shiny surface, obey the control unit manual when the E3FS is used as a safety device.
Use an opaque test piece with 11 mm in diameter and 200 mm or greater in effective length to check the detection capability.
Do not connect the E3FS to an AC or DC power supply with higher voltage than nominal 24 VDC. Otherwise the sensor may explode, burn, or cause electric shock. The power supply must conform to regulatory requirements and standards, regarding EMC and electrical equipment safety, of the country where the E3FS is installed. For example, the power supply must fulfil EN60742 requirements for double insulation and must conform to EMC Directive and Low Voltage Directive in EU.
NOTICE
A load must not be shorted. A load must not be used with current higher than the rating. Do not apply the reversed supplied voltage. Be sure to route the E3FS cable separated from high-potential power line or through an exclusive conduit.
E3FS must not be used in water.
The E3FS is ready to operate 100ms after the E3FS is turned ON. If the load and E3FS are connected to independent power supplies respectively, be sure to turn ON the sensor before turning the load ON.
To extend the cable, use a wire of 0.3mm ² or more. However do not extend it more than 50m.
Do not use the E3FS in explosive or flammable gas.
Do not disassemble, repair, and modify the E3FS.
Do not exceed a torque of 2.0N·m (20Kgf·cm) when tightening mounting nuts for plastic models 20.0N·m (200Kgf·cm) when tightening mounting nuts for metal models.
For connector type of E3FS, make sure the cable connector is rated IP54 or higher. Be sure to connect or disconnect the connector after turning OFF the E3FS. Hold the connector cover to connect or disconnect the connector. Secure the connector cover by hand. Do not use any pliers. The proper tightening torque range should be checked according to connector specification. Be sure to tighten the connector securely.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
