## BH4-D10V2-230

Switching and dimming of adjustable ballasts 1 to 10 V
8 control-channel receiver
For DIN-rail mounting
LED-indications for alarm, smart-house carrier and output
Bulb-conserving soft-start function
Channel coding by BGP-COD-BAT
4 lighting scenes
Transmits the status of the dimming outputs

## OUTPUT SPECIFICATIONS

| Ballast outputs | 2 |
| :--- | :--- |
| Dimming capacity | $2 \times 1$ to 10 V |
| Max. load capacity | 50 mA on each output |
| Dimming speed | $3.6 \mathrm{~s}(10 \%-100 \%)$ |
| Relay outputs | 2 |
| Max. switching voltage | 250 VAC |
| Resistive loads | AC1 |
| Response time | 16 A |
|  | $1 \mathrm{cycle}:$ |

## SUPPLY SPECIFICATIONS

## Power Supply

| Rated operational voltage | $230 \mathrm{VAC} \pm 10 \%$ |
| :--- | :--- |
| Power consumption | 2 VA |
| Power dissipation | Max. 4.5 W |

Power disipation
Max. 4.5 W
Frequency $\quad 50 / 60 \mathrm{~Hz}$

## MODE OF OPERATION

## Coding

With the BGP-COD-BAT programming unit, each switching channel can be assigned any address between A1 and P8 via the modular socket on the front of the dimmer. The allocation of the channels is as follows:

| Description |  | Channel |
| :---: | :---: | :---: |
| $\frac{\text { N }}{2}$ | 1 | ON / OFF / Dimming |
|  | 2 | Lighting scene 1 (3) |
|  | 3 | Lighting scene 2 (4) |
|  | 4 | Dimmer 1 output status |
| $\sum_{i}^{N}$ | 5 | ON / OFF Dimming |
|  | 6 | Lighting scene 1 (3) |
|  | 7 | Lighting scene 2 (4) |
|  | 8 | Dimmer 2 output status |

Functions which are not required should remain uncoded. The coding of the dimmer can be carried out without either supply voltage or smart-house signal. It is retained permanently, but may be overwritten at any time. The Dimmer output are configured in such a way at the factory that it will be switched off in the event of a fault. This configuration, too, can be changed with the BGP-COD-BAT. Setting " 1 " results in switching on the lighting to $100 \%$ in case of a fault, while setting "0" switches off the Dimmer output (factory setting).

## Putting into service

Commissioning may only be carried out by an authorised, trained technician. Observe the connection diagram when installing. All lines to be connected must be dead.

The following table shows the allocation of terminals:

| Terminal | Description |
| :--- | :--- |
| 1 | smart-house signal conductor + (D +) |
| 2 | smart-house signal conductor - (D -) |
| 4 | Dimmer 1, 1 to $10 \mathrm{~V}+$ |
| 5 | Dimmer 1, 1 to $10 \mathrm{~V}-$ |
| 7 | Dimmer 2, 1 to $10 \mathrm{~V}+$ |
| 8 | Dimmer 2, 1 to 10 $\mathrm{V}+$ |
| 21 | Line in |
| 22 | N - conductor |
| 24 | Dimmer 1, Relay, $\mathrm{L}_{\text {in }}$ |
| 25 | Dimmer 1, Relay, $\mathrm{L}_{\text {out }}$ |
| 27 | Dimmer 2, Relay, $\mathrm{L}_{\text {in }}$ |
| 28 | Dimmer 2, Relay, $\mathrm{L}_{\text {out }}$ |

Connections between the smart-house signal and to earth potential will cause malfunctions and are not permissible. Attention should be paid to the correct polarity of the supply volt-
age and the smart-house signal. In order to meet the requirements for protective low voltage, VDE 0100, part 410, should be observed and applied during installation.

## LED indicators

Front-mounted LEDs indicate the status of the device:

| LED | Description |
| :--- | :--- |
| GREEN | Supply ON |
| YEL- <br> LOW <br> "Bus OK" | smart-house carrier: <br> OFF: Bus fault <br> ON: Bus is OK |
| RED | Dimmer 1: |
| Output <br> 1 | OFF: Dimmer output off <br> ON: Dimmer output on |
| RED <br> Output <br> 2 | Dimmer 2: <br> OFF: Dimmer output off <br> ON: Dimmer output on |
