DATASHEET - +NZM2-250-XKCU

Box terminal, 3p, bottom up to 300A

Part no.	+NZM2-250-XKCU
	262243
EL Number	4315556
(Norway)	

General specifications

Amperage Rating \$ 300 A Frame NZMZ Suitable for NZMZ Used with NZMZ Used with NZMZ Mounting position NZMZ(4), PK2(-4), NS2(-4) Technical Data - Mechanical - Terminals Fitted at the bottom Terminal capacity (stranded cable) Muming position Terminal capacity (stranded cable) Muming monitor in the cable manufacturer. 1/2 SS/MX (http://LX) Design verification as per IEC/EN 61439 Meets the product standard's requirements. 102.22 Verification of thermal stability of eclosures Meets the product standard's requirements. 102.22 Verification of these used to insulting materials to normal heat Does not apply, since the entire switchgare needs to be evaluated. 102.22 Verification of these used estances Meets the product standard's requirements. 102.22 Verification of these of insulting materials to normal heat Does not apply, since the entire switchgare needs to be evaluated. 102.23 Verification of these of insulting materials to normal heat Meets the product standard's requirements. 102.24 Verification of these of insulting materials to normal heat Does not apply, since the entire switchgare needs to be evaluated. 102.4 NSTAC Meets the product standard's requirements. Does not apply, since the	Туре	Accessory Box terminal Terminal
Frame NZM2 Suitable for Coppor cable Uad with Coppor cable Mounting position NZM2(4), NZ(4), NZ(4), NZ(4) Technical Data - Mechanical NEChnical Terminals Terminal capacity (stranded cable) Fitted at the bottom Terminal capacity (stranded cable) In m ² - 20 mm ² (20) Up to Sign writication as per IEC/EN 61439 In m ² - 20 mm ² (20) 102.22 Corosion resistance Meets the product standard's requirements. 102.23 Unification of resistance of insulating materials to normal heat Meets the product standard's requirements. 102.24 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 102.23 Unification of resistance of insulating materials to normal heat Meets the product standard's requirements. 102.24 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 102.24 Normality (V) radiation Does not apply, since the entire switchgear needs to be evaluated. 102.25 Uming Does not apply, since the entire switchgear needs to be evaluated. 102.24 Resistance to ultre-violet (VV) radiation Meets the product standard's requirements. 102.25 Uming Does not apply, since the entire switchgear needs to be evaluated	Number of poles	Three-pole
Suitable for Image pole Copper cable Used with NZM2(-4), NSD(-4), NSD(-4) Technical Data - Mechanical Fitted at the bottom Terminal capacity (stranded cable) Fitted at the bottom Terminal capacity (stranded cable) Fitted at the bottom Design verification as per IEC/EN 51439 Fitted at the bottom 10.22 Corrosion resistance Fitted at the bottom 10.22 Corrosion resistance Fitted at the product standard's requirements. 10.22 Corrosion resistance Meets the product standard's requirements. 10.22 Corrosion resistance Meets the product standard's requirements. 10.22 Lorins in resistance of insult matt to abnormal heat Meets the product standard's requirements. 10.22 Lorins in resistance of insult matt to abnormal heat Meets the product standard's requirements. 10.23 Resist of insult matt to abnormal heat Des not apply, since the entire switchgar needs to be evaluated. 10.24 Resistance to altra-viole (UV) radiation Meets the product standard's requirements. 10.25 Lifting Des not apply, since the entire switchgar needs to be evaluated. 10.25 Lifting Des not apply, since the entire switchgar needs to be evaluated. 10.30 Degree of protection of assembles Des not apply, since the entire switchgar	Amperage Rating	≦ 300 A
Copper cable Copper cable Used with NZM2(4), NIS)2(4), NIS)2(4) Technical Data - Mechanical Fitted at the bottom Mounting position Fitted at the bottom Technical Data - Mechanical - Terminals Fitted at the bottom Terminal capacity (stranded cable) 4 mm ² - 70 mm ² [2x] Up to 35 mm ² cab to connected depending on the cable manufacturer. 12:3:30 MOB/Lemit (1x) Terminal capacity (copper strip) 4 mm ² - 70 mm ² [2x] Up to 35 mm ² cab to connected depending on the cable manufacturer. 12:3:30 MOB/Lemit (1x) Design verification as per IEC/EN 61439 Meets the product standard's requirements. 102.22 Corresion resistance Meets the product standard's requirements. 102.33 Resist of insul mat to abnormal heat/fire by internal elect effects Meets the product standard's requirements. 102.24 Corresion of assembles Meets the product standard's requirements. 102.33 Resist of insul mat to abnormal heat/fire by internal elect effects Meets the product standard's requirements. 102.24 Corresion of assembles Does not apply, since the entire switchgear needs to be evaluated. 102.34 Resist of insul mat to abnormal heat/fire by internal elect. Meets the product standard's requirements. 102.25 Urification of product in against electric stock Meets the product standa	Frame	NZM2
Technical Data - Mechanical Fited at the bottom Mounting position Fited at the bottom Terminal capacity (stranded cable) In m ² - 20 mm ² (2), U to 95 mm ² can be connected depending on the cable manufacturer. 1(2 - 250 WM/Gomml (1x)) Terminal capacity (stranded cable) In 95 mm ² (2), U to 95 mm ² can be connected depending on the cable manufacturer. 1(2 - 250 WM/Gomml (1x)) Terminal capacity (copper strip) Zegnents of 9 mm x 0.8 mm r 0.8 mm or 8 segments of 15 mm x 0.8 mm or 8 segments of 15.5 mm x 0.8 mm (2x) Design verification as per IEC/EN 61439 Meets the product standard's requirements. 102.22 Carrosion resistance Meets the product standard's requirements. 102.33 Verification of thermal stability of enclosures Meets the product standard's requirements. 102.32 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 102.33 Resist. of insul. mat. to abnormal heat/fire by internal elect. effects Meets the product standard's requirements. 102.25 Lifting Does not apply, since the entire switchgear needs to be evaluated. 102.47 Inscriptions Does not apply, since the entire switchgear needs to be evaluated. 103.25 Protection against electric shock Does not apply, since the entire switchgear needs to be evaluated. 104.4 Clearances and crecepage distances Does not apply, since the entire	Suitable for	
Mounting position Fitted at the bottom Technical Data - Mechanical - Terminals 4 mm ² - 70 mm ² (2x) Up to 95 mm ² cabe connected depending on the cable manufacturer. 12: 250 AWG/kcml (1x) 10 mm ² - 125 SO AWG/kcml (1x) 10 mm ² - 125 SO AWG/kcml (1x) Terminal capacity (copper strip) 2 segments mm ² (1x) 10 mm ² - 125 mm x 0.8 mm (1x) Design verification as per IEC/EN 61439 Meets the product standard's requirements. 10.2.2 Corrosion resistance Meets the product standard's requirements. 10.2.3 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.2.3 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.2.3 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.2.3 Resist of insult ant to abormal heat Meets the product standard's requirements. 10.2.4 Resistance to ultra-violet (UV) radiation Does not apply, since the entire switchgear needs to be evaluated. 10.2.5 Utting Does not apply, since the entire switchgear needs to be evaluated. 10.2.6 Meets the product standard's requirements. Does not apply, since the entire switchgear needs to be evaluated. 10.2.7 Inscriptions Does not apply, since the entire switchgear needs to be evaluated. 10.3 Cornection of assemblies Does not	Used with	NZM2(-4), PN2(-4), N(S)2(-4)
Terminal capacity (strandad cable) 4 mm² - 70 mm² (2x) Up to 95 mm² cab be connected depending on the cable manufacturer. 12: 250 AVG/kcmil (1x) 10 mm² - 185 mm² (1x) Terminal capacity (copper strip) 2 segments of 9 mm x 0.8 mm - 10 segments of 16 mm x 0.8 mm or 8 segments of 10 mm² - 185 mm² (1x) Design verification as per IEC/EN 61439 Meets the product standard's requirements. 10.22 corrosion resistance Meets the product standard's requirements. 10.23.1 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.23.2 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 10.23.2 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 10.24 Resistance to ultra-violet (UV) radiation Meets the product standard's requirements. 10.25 Lifting Does not apply, since the entire switchgear needs to be evaluated. 10.25 Lifting Does not apply, since the entire switchgear needs to be evaluated. 10.25 Lifting Does not apply, since the entire switchgear needs to be evaluated. 10.25 Lifting Does not apply, since the entire switchgear needs to be evaluated. 10.26 Grossion against electric shock Does not apply, since the entire switchgear needs to be evaluated. 10.27 Inscriptions Does not apply, since the entire switch	Technical Data - Mechanical	
Terminal capacity (stranded cable) 4 mm ² - 70 mm ³ (2x) Up to gis m ² cab be connected depending on the cable manufacturer. 12 - 30 AVUS/kem (1(x)) Terminal capacity (copper strip) Design verification as per IEC/EN 61439 10.22 Corrosion resistance 10.22 Corrosion resistance of insulating materials to normal heat 10.23.1 Verification of thermal stability of enclosures 10.23.2 Verification of resistance of insulating materials to normal heat 10.23.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effects 10.24 Resistance to ultra-violet (UV) radiation 10.25 Lifting 10.26 Mechanical impact 10.27 Inscriptions 10.28 Mechanical ingate de protection of assemblies 10.29 Tortection of assemblies 10.29 Tortection of assemblies 10.29 Tortection of switching devices and components 10.29 Tortection of switching devices and components 10.5 Protection of switching devices and components 10.7 Internal electric strongth 10.8 Connections for external conductors 10.8 Connections of external conductors 10.8 Connections of external conductors 10.8 Derive with the devices and connections 10.9 Tortection of switching devices and connections	Mounting position	Fitted at the bottom
Link and the set of the set	Technical Data - Mechanical - Terminals	
10.2.2 Corrosion resistance Meets the product standard's requirements. 10.2.3 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.2.3.1 Verification of thermal stability of enclosures Meets the product standard's requirements. 10.2.3.2 Verification of resistance of insulating materials to normal heat Meets the product standard's requirements. 10.2.3.3 Resist. of insul.mat. to abnormal heat/fire by internal elect. effects Meets the product standard's requirements. 10.2.4 Resistance to ultra-violet (UV) radiation Meets the product standard's requirements. 10.2.5 Lifting Does not apply, since the entire switchgear needs to be evaluated. 10.2.7 Inscriptions Meets the product standard's requirements. 10.3 Degree of protection of assemblies Does not apply, since the entire switchgear needs to be evaluated. 10.4 Clearances and creepage distances Does not apply, since the entire switchgear needs to be evaluated. 10.4 Clearance and creepage distances Does not apply, since the entire switchgear needs to be evaluated. 10.7 Internal electric al circuits and connections Is the panel builder's responsibility. 10.8 Connections for external conductors Is the panel builder's responsibility. 10.8 J Prover-frequency electric strength Is the panel builder's responsibility. 10.8 J Prewer	Terminal capacity (stranded cable)	Up to 95 mm² can be connected depending on the cable manufacturer. 12 - 350 AWG/kcmil (1x)
10.2.2 Corrosion resistanceMeets the product standard's requirements.10.2.3.1 Verification of thermal stability of enclosuresMeets the product standard's requirements.10.2.3.2 Verification of resistance of insulating materials to normal heatMeets the product standard's requirements.10.2.3.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effectsMeets the product standard's requirements.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Inpulse withstand voltageIs the panel builder is responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder is responsibility.10.01 Temperature riseThe panel builder is responsibility.	Terminal capacity (copper strip)	
10.2.3.1 Verification of thermal stability of enclosuresMeets the product standard's requirements.10.2.3.2 Verification of resistance of insulating materials to normal heatMeets the product standard's requirements.10.2.3.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effectsMeets the product standard's requirements.10.2.4 Resistance to ultra-violet (UV) radiationMeets the product standard's requirements.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3.0 Begree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder's responsibility.	Design verification as per IEC/EN 61439	
10.2.3.2 Verification of resistance of insulating materials to normal heatMeets the product standard's requirements.10.2.3.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effectsMeets the product standard's requirements.10.2.4 Resistance to ultra-violet (UV) radiationDoes not apply, since the entire switchgear needs to be evaluated.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.6 Mechanical impactDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder is responsibile for the temperature rise calculation. Eaton will	10.2.2 Corrosion resistance	Meets the product standard's requirements.
10.2.3.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effectsMeets the product standard's requirements.10.2.4 Resistance to ultra-violet (UV) radiationDoes not apply, since the entire switchgear needs to be evaluated.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.6 Mechanical impactDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.0 Temperature riseThe panel builder is responsibility.	10.2.3.1 Verification of thermal stability of enclosures	Meets the product standard's requirements.
10.2.4 Resistance to ultra-violet (UV) radiationMeets the product standard's requirements.10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.6 Mechanical impactDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesDoes not apply, since the entire switchgear needs to be evaluated.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsDoes not apply, since the entire switchgear needs to be evaluated.10.9 Power-frequency electric strengthIs the panel builder's responsibility.10.9.1 Npulse withstand voltageIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialThe panel builder's responsibility.10.10 Temperature riseThe panel builder is responsibility.	10.2.3.2 Verification of resistance of insulating materials to normal heat	Meets the product standard's requirements.
10.2.5 LiftingDoes not apply, since the entire switchgear needs to be evaluated.10.2.6 Mechanical impactDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder is responsibile for the temperature rise calculation. Eaton will	10.2.3.3 Resist. of insul. mat. to abnormal heat/fire by internal elect. effects	Meets the product standard's requirements.
10.2.6 Mechanical impactDoes not apply, since the entire switchgear needs to be evaluated.10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder is responsibility.	10.2.4 Resistance to ultra-violet (UV) radiation	Meets the product standard's requirements.
10.2.7 InscriptionsMeets the product standard's requirements.10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder is responsibility.	10.2.5 Lifting	Does not apply, since the entire switchgear needs to be evaluated.
10.3 Degree of protection of assembliesDoes not apply, since the entire switchgear needs to be evaluated.10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseThe panel builder is responsible for the temperature rise calculation. Eaton will	10.2.6 Mechanical impact	Does not apply, since the entire switchgear needs to be evaluated.
10.4 Clearances and creepage distancesMeets the product standard's requirements.10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialImpact Insulating material10.10 Temperature riseImpact Insulation. Eaton will	10.2.7 Inscriptions	Meets the product standard's requirements.
10.5 Protection against electric shockDoes not apply, since the entire switchgear needs to be evaluated.10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseIt is panel builder's responsibility.	10.3 Degree of protection of assemblies	Does not apply, since the entire switchgear needs to be evaluated.
10.6 Incorporation of switching devices and componentsDoes not apply, since the entire switchgear needs to be evaluated.10.7 Internal electrical circuits and connectionsIs the panel builder's responsibility.10.8 Connections for external conductorsIs the panel builder's responsibility.10.9.2 Power-frequency electric strengthIs the panel builder's responsibility.10.9.3 Impulse withstand voltageIs the panel builder's responsibility.10.9.4 Testing of enclosures made of insulating materialIs the panel builder's responsibility.10.10 Temperature riseIt is the panel builder's responsibility.	10.4 Clearances and creepage distances	Meets the product standard's requirements.
10.7 Internal electrical circuits and connectionsImage: section of the	10.5 Protection against electric shock	Does not apply, since the entire switchgear needs to be evaluated.
10.8 Connections for external conductors Image: Contract of the panel builder's responsibility. 10.9.2 Power-frequency electric strength Image: Contract of the panel builder's responsibility. 10.9.3 Impulse withstand voltage Is the panel builder's responsibility. 10.9.4 Testing of enclosures made of insulating material Image: Contract of the panel builder's responsibility. 10.10 Temperature rise Image: Contract of the panel builder's responsibility.	10.6 Incorporation of switching devices and components	Does not apply, since the entire switchgear needs to be evaluated.
10.9.2 Power-frequency electric strength Is the panel builder's responsibility. 10.9.3 Impulse withstand voltage Is the panel builder's responsibility. 10.9.4 Testing of enclosures made of insulating material Is the panel builder's responsibility. 10.10 Temperature rise The panel builder is responsibility.	10.7 Internal electrical circuits and connections	Is the panel builder's responsibility.
10.9.3 Impulse withstand voltage Is the panel builder's responsibility. 10.9.4 Testing of enclosures made of insulating material Is the panel builder's responsibility. 10.10 Temperature rise The panel builder is responsibile for the temperature rise calculation. Eaton will	10.8 Connections for external conductors	Is the panel builder's responsibility.
10.9.4 Testing of enclosures made of insulating material Is the panel builder's responsibility. 10.10 Temperature rise The panel builder is responsible for the temperature rise calculation. Eaton will	10.9.2 Power-frequency electric strength	Is the panel builder's responsibility.
10.10 Temperature rise The panel builder is responsible for the temperature rise calculation. Eaton will	10.9.3 Impulse withstand voltage	Is the panel builder's responsibility.
	10.9.4 Testing of enclosures made of insulating material	Is the panel builder's responsibility.
	10.10 Temperature rise	

10.11 Short-circuit rating	Is the panel builder's responsibility. The specifications for the switchgear must be observed.
10.12 Electromagnetic compatibility	Is the panel builder's responsibility. The specifications for the switchgear must be observed.
10.13 Mechanical function	The device meets the requirements, provided the information in the instruction leaflet (IL) is observed.
Additional information	
Model	Other

Technical data ETIM 9.0

Low-voltage industrial components (EG000017) / Wiring set for power circuit breaker (EC002050)

Electric engineering, automation, process control engineering / Low-voltage switch technology / Circuit breaker (LV < 1 kV) / Wiring set for circuit breaker (ecl@ss13-27-37-04-24 [ACN957016])		
Suitable for number of poles	3
