Characteristics

These tripping characteristics are mean values of the spread at 20 °C ambient air temperature in a cold state. Tripping time depends on response current. When the devices are at operational temperature the tripping time of the overload relay reduces to approx. 25 % of the read off value.

Tolerances for tripping times: max. $\pm 20\%$
 Toleranzen für Auslösezeiten: max. $\pm 20\%$
 Tolérances temps de déclenchement: $\pm 20\%$
