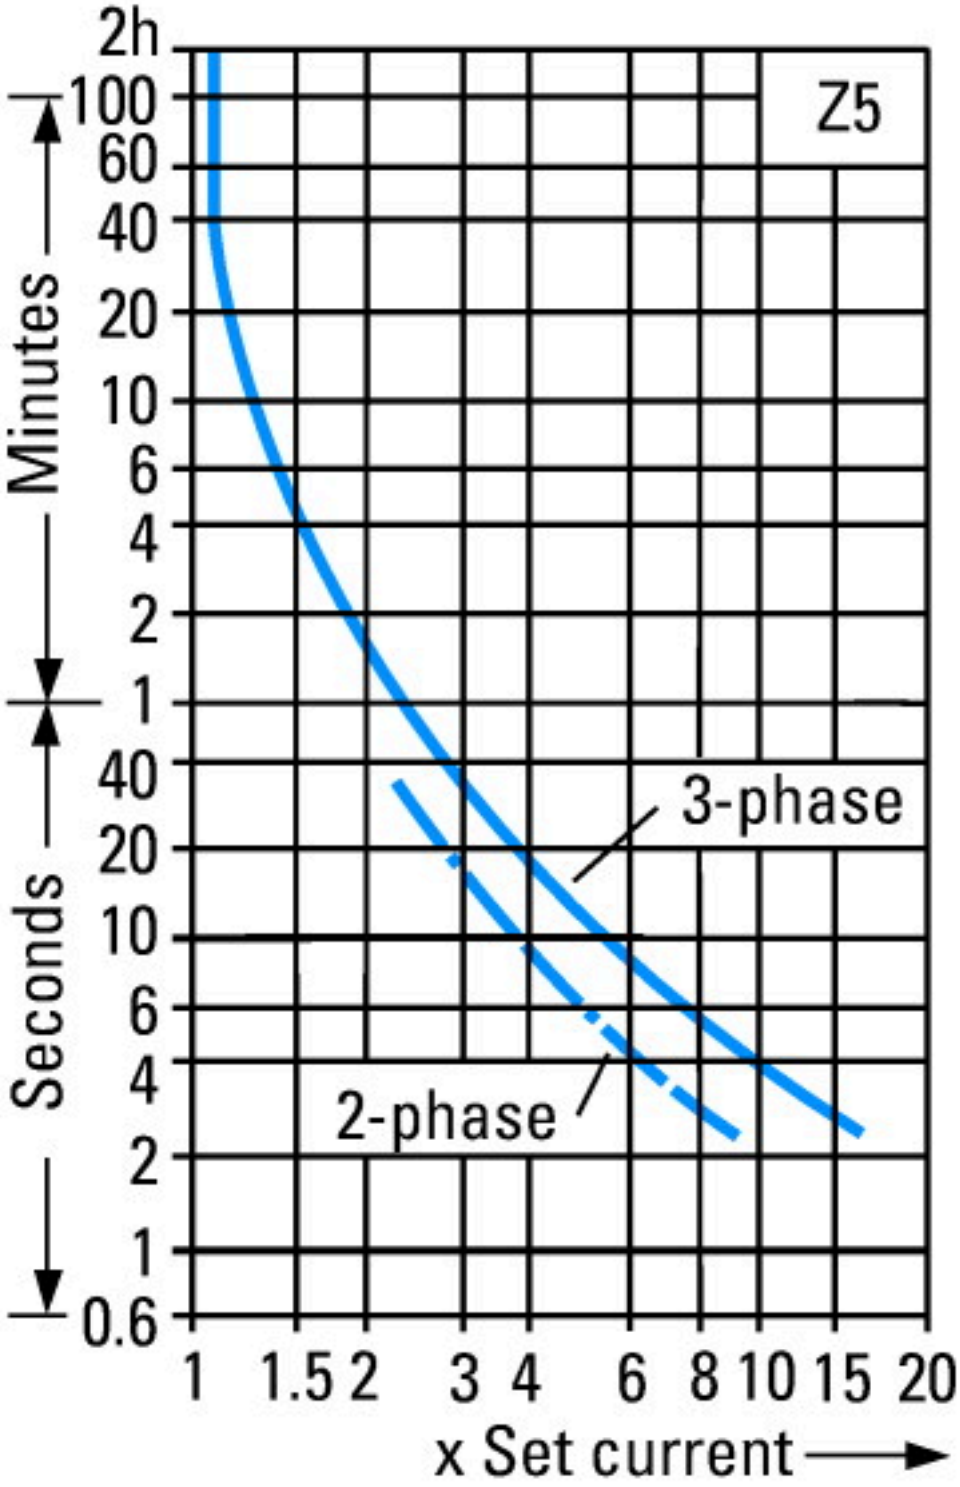
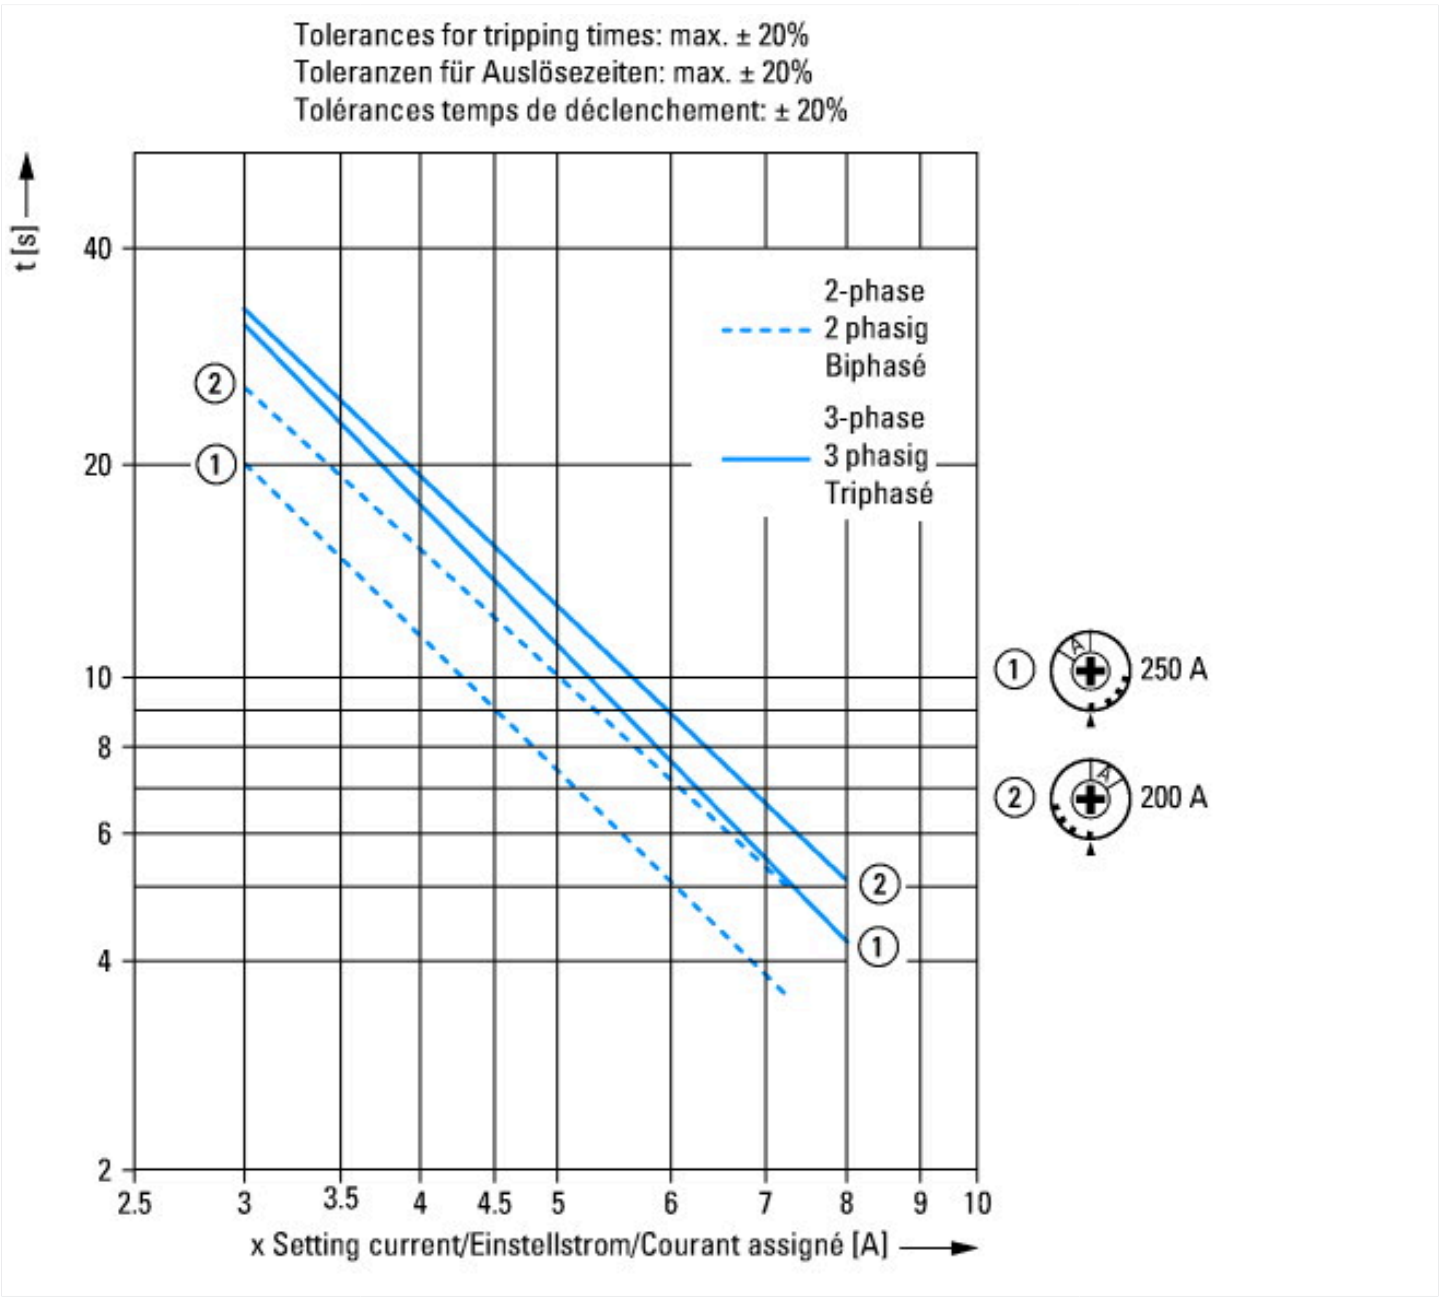
Characteristics



These tripping characteristics are mean values of the spreads at 20 °C ambient air temperature in a cold state.
Tripping time depends on response current.
When the devices are at operational temperature the tripping time of the overload relay falls to approx. 25 % of the read off value.



Tolerances for tripping times: max. ± 20%
Toleranzen für Auslösezeiten: max. ± 20%
Tolérances temps de déclenchement: ± 20%
