Everything from a single source

With over 100 years of innovation and manufacturing expertise, Panasonic Industry Europe remains committed to its vision of creating “A Better Life, A Better World.” Panasonic can look back on decades of experience in the electronics industry and, thanks to its dedicated customer orientation, is a competent and reliable partner for customers throughout Europe when it comes to technical expertise in combination with solution orientation. As a provider of tailor-made solutions, we focus on offering our customers products and services in the Mobility, Living Space and Business sectors that make a difference thanks to our proprietary innovations.

Smart automation technology

The factory of the future will achieve new levels of productivity, effectiveness and profitability through comprehensive networking. Equipment and components from Panasonic Industry Europe offer leading-edge **Industry 4.0** features, as connectivity, energy efficiency, reliability and sturdiness play a pivotal role in modern production environments.

The Panasonic Industry Europe portfolio not only offers key electronic components, devices, modules and software but also complete solutions for production lines in a wide variety of industries. Panasonic Industry's comprehensive know-how along the entire value chain, combined with a corporate culture geared to customer needs, enables it to offer customer-specific solutions that extend beyond the products.

Our experience as a manufacturer and a sales partner for components and products allows us to share our experience with our customers. Customer wishes are specifically integrated into the development of new products, so that we can surpass our role as a supplier and become a competent, long-term partner for our customers.

A new performance class of innovative sensor technology

Over the past ten years, Panasonic has developed a wide range of high-quality sensors that fit into our portfolio of a provider of complete solutions for factory automation. Besides through-beam and retroreflective types, reflective sensors and optical fiber photoelectric sensors, we also offer laser and eddy current and contact analog sensors that provide precise measurement results even in the most complicated of applications.

Our delivery program also includes safety sensors, photoelectric sensors for special applications, inductive proximity switches and miniature pressure sensors for relative or differential pressure measurement, and ionizers for Electro Static Discharge (ESD) applications. Of course, we adapt our sensors to your individual requirements in order to ensure optimal functionality and efficiency.

Service

In addition to an expert hotline, the extensive service from Panasonic Industry Europe also includes workshops and on-site service to ensure that our sensors are used reliably and effectively.

Apart from the broad product portfolio of sensors, Panasonic Industry Europe also offers programmable logic controllers, touch terminals, drive technology, energy management systems, ionizers, automation components and many other products and complete solutions.

IO-Link

DP-100L · HG-C1000L · FX-550L

Standardized connection to the
field level

Features

■ Connection to the field level

The standardized **IO-Link** technology makes connection to the field level easier than ever before.

Sensors can communicate with the defined masters via EtherCAT, Profinet or EtherNet/IP.

■ Self-diagnosis function

All IO-Link sensors from Panasonic have an integrated self-diagnosis function. The function monitors the function parameters specific to the sensor type and automatically outputs a warning signal if deviations from the specified behavior occur. Users save time because for maintenance it is sufficient to monitor only one signal instead of a number of sensor parameters.

Technical specifications

■ HG-C1000L

Cable type	HG-C1030L3-P	HG-C1050L3-P	HG-C1100L3-P	HG-C1200L3-P	HG-C1400L3-P
M12 connector type	HG-C1030L3-P-J	HG-C1050L3-P-J	HG-C1100L3-P-J	HG-C1200L3-P-J	HG-C1400L3-P-J
Measuring range	30±5mm	50±15mm	100±35mm	200±80mm	400±200mm
Repeatability	10µm	30µm	70µm	200µm	300µm (200-400mm) 800µm (400-600mm)
Linearity	±0.1% F.S.			±0.2% F.S.	±0.3% F.S.
Beam diameter	Approx. 50µm	Approx. 70µm	Approx. 120µm	Approx. 300µm	Approx. 500µm
Beam source	Red semiconductor laser (655nm), Class 2 (JIS/IEC/GB)/Class II (FDA)				
Supply voltage	12 to 24V DC ±10%				
Switching and communication line (C/Q)	Communication specification	IO-Link specification V1.1			
	Baud rate	COM3 (230.4kbit/s)			
	Process data	4 bytes			
	Transmission cycle time	1ms			
Control output (DO)	PNP open-collector transistor, max. 50mA				
Response time	Switchable between high speed (1.5ms), standard (5ms), and high precision (10ms)				
Degree of protection	IP67				
Cable	Cable type: 4-wire PVC cable, 2m M12 connector type: 4-wire PVC cable, 0.3m				
Material	Enclosure: die-cast aluminum, front cover: acrylic				
Dimensions (HxWxD)	44x20x25mm				

DP-100L

Type	Pigtailed type		M12 connector type		
	Low pressure type	High pressure type	Low pressure type	High pressure type	
Model number	DP-101ZL3-M-P	DP-102ZL3-M-P	DP-101ZL3-M-P-C	DP-102ZL3-M-P-C	
Rated pressure range (note 1)	-1 bar to 1 bar (-100.0 to +100.0kPa)	-1 bar to +10 bar (-0.100 to +1.0MPa)	-1 to 1 bar (-100.0 to +100.0kPa)	-1 bar to +10 bar (-0.100 to +1.0MPa)	
Applicable fluid	Non-corrosive gas				
Supply voltage	12 to 24V DC \pm 10%				
Switching and communication line (C/Q)	Communication specification	IO-Link specification V1.1			
	Baud rate	COM3 (230.4kbit/s)			
	Process data	4 bytes			
	Transmission cycle time	1ms			
Control output (DO)	PNP open-collector transistor, max. 50mA				
Output operation	Output operation	Normally open contact (NO) / normally closed contact (NC) selectable			
	Output modes	3 modes: EASY, hysteresis mode, window comparator mode			
	Hysteresis	Minimum 1 digit (variable)			
	Repeatability (within \pm 2 digits)	\pm 0.1% FS	\pm 0.2% FS	\pm 0.1% FS	\pm 0.2% FS
	Response time	2.5ms, 5ms, 10ms, 25ms, 50ms, 100ms, 250ms, 500ms, 1000ms, 5000ms selectable by key operation			
LED indicator	LED (orange)				
Pressure port	M5 female thread				
Material	Housing: PBT, LC display: Acrylic, Pressure port: SUS 303, thread: brass, buttons: silicon rubber				
Connection method	Connector (note 2)		M12 connector		
Dimensions (HxWxD)	30x30x42.5mm				
Accessories	CN-14A-C2 pigtail type 2m: 1 pc.		M12 connector cable 0.3m: 1 pc.		

- Notes:**
- 1.) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20°C. Reference pressure = 1atm
 - 2.) The cable CN-14A-C2 is included

FX-550L

Type	Pigtailed type	M12 connector type
Model number	FX-551L3-P-C2	FX-551L3-P-J
Supply voltage	12 to 24V DC \pm 10%	
Switching and communication line (C/Q)	Communication specification	IO-Link specification V1.1
	Baud rate	COM3 (230.4kbit/s)
	Process data	4 bytes
	Transmission cycle time	1ms
Control output (DO)	PNP open-collector transistor, max. 50mA	
Emitting element (modulated)	Red LED (Peak emission wavelength: 660nm)	
Response time	Adjustable. STD: min. 250 μ s, LONG: min. 2ms, U-LG: min. 4ms, HYPR: min. 24ms	
Sensitivity setting	2-point teaching, limit teaching, full auto-teaching, manual adjustment	
Incident light sensitivity setting	Incorporated, 4 steps	
Incident light intensity display range	Adjustable. STD: 0 to 4000, LONG: 0 to 8000, U-LG / HYPR: 0 to 9999	
Degree of protection	IP40	
Ambient temperature	-10 to +55°C	
	For 4 to 7 sensors in series connection: -10 to +50°C; for 8 to 16 sensors in series connection: -10 to +45°C (no condensation or freezing). Storage: -20 to +70°C	
Connection method	0.2mm ² 4-core cab tire cable, 2m	0.2mm ² 4-core cab tire cable with M12 connector, 0.3m
Material	Housing and protective cover: Polycarbonate; buttons: Polyacetal	
Dimensions (HxWxD)	34x10x75mm

GX-300

Cylindrical inductive sensor with IO-Link type

Features

IOT ready

With the implemented IO-Link technology network integration is easy. The IO-Link models can be used as normal digital PNP output sensors or providing information about the sensor level

or the current sensor condition via IO-Link interface. This is perfect for predictive maintenance and applications with higher expectations.

DC 3-wire type (Shielded type)

Type		Shielded type			
		Threaded type			
Model No. (note 2)	Normally Open	GX-308M-A-P-□	GX-312M-A-P-□	GX-318M-A-P-□	GX-330M-A-P-□
Rated sensing distance		1.5mm	2.0mm	5mm	10mm
Stable sensing distance (note 3)		0 to 1.2mm	0 to 1.6 mm	0 to 4 mm	0 to 8mm
Standard sensing object (note 7)		8x8mm	12x12mm	18x18mm	30x30mm
Hysteresis		Max. 10% of measurement distance			
Supply voltage (note 4)		10-30V DC ±10% (note1)			
Current consumption		max. 16mA			
Control output		PNP open-collector transistor, 200mA (note 2)			
Switching and communication line (C/Q)	Communication specification	IO-Link specification V1.1			
	Baud rate	COM3 (230.4kbit/s)			
	Process data	PD size: 2 bytes, OD size: 1 byte (M-sequence type: TYPE2_2)			
	Transmission cycle time	0.4ms			
Response Frequency (note 5)		2kHz	1.5kHz	0.6kHz	0.4kHz
Protection		IP67 (IEC)			
Ambient temperature		-40 to +85°C			
Dimension (HxWxD)		M8x37.8mm	M12x47.1mm	M18x55.3mm	M30x60.3mm
Material		Case: Nickel-plated brass [stainless steel (SUS303) for GX-308M(K)-□], Sensing part: Polybutylene terephthalate (PBT)			
Connection method (note 6)		Cable, 2m or 5m; M12 connector type; pigtail type			

DC 3-wire type (Shielded type, long sensing range)

Type		Shielded type			
		Long sensing range			
		Threaded type			
Model No. (note 2)	Normally Open	GX-308MK-A-P-□	GX-312MK-A-P-□	GX-318MK-A-P-□	GX-330MK-A-P-□
Rated sensing distance		2.0mm	4.0mm	8mm	15mm
Stable sensing distance (note 3)		0 to 1.6mm	0 to 3.2mm	0 to 6.4mm	0 to 12mm
Standard sensing object (note 7)		8x8mm	12x12mm	18x18mm	30x30mm
Hysteresis		Max. 15% of measurement distance			
Supply voltage (note 4)		10-30V DC ±10% (note1)			
Current consumption		max. 16mA			
Control output		PNP open-collector transistor, 200mA (note 2)			
Switching and communication line (C/Q)	Communication specification	IO-Link specification V1.1			
	Baud rate	COM3 (230.4kbit/s)			
	Process data	PD size: 2 bytes, OD size: 1 byte (M-sequence type: TYPE2_2)			
	Transmission cycle time	0.4ms			
Response Frequency (note 5)		1.5kHz	1.kHz	0.5kHz	0.25kHz
Protection		IP67 (IEC)			
Ambient temperature		-40 to +85°C			
Dimension (HxWxD)		M8x37.8mm	M12x47.1mm	M18x55.3mm	M30x60.3mm
Material		Case: Nickel-plated brass [stainless steel (SUS303) for GX-308M(K)-□], Sensing part: Polybutylene terephthalate (PBT)			
Connection method (note 6)		Cable, 2m or 5m; M12 connector type; pigtail type			

Notes:

- Where measurement conditions have not been specified precisely, the conditions ambient temperature +23°C
- Suffix -P = PNP type
- The specified stable sensing distance is the range in which the sensor works reliably even in case of deviations in temperature or voltage
- When used at a power of 12 V, the product is less susceptible to the effects of internal self-heat generation and therefore a more stable repeat accuracy can be obtained
- The response frequency is an average value.
- Suffix -C5 = 5m cable / Suffix -J = Pigtail 0.3m with M12 connector / Suffix -Z = M12 connector type
- Standard sensing object = sheet steel, thickness: 1mm

Services that make a difference

To ensure that our customers get the best out of our products and solutions we provide a complete package of services. Our experienced sales engineers, product specialists, product management and technical engineers consult on any new project and provide our customers with recommendations for the ideal products and solutions for each individual task. That is the reason why products and solutions of Panasonic Industry are considered highly reliable.

CX-400

A full lineup of world standard photoelectric sensors

Features

Great lineup of 170 models

The **CX-400** series has a high level of basic functionality and excellent cost performance. Moreover, a wide number of variations means that there is sure to be a sensor that fits your needs.

Type	Sensing range
CX-412 □ Thru-beam (long sensing range)	15m
CX-411 □ Thru-beam	10m
CX-493 □ Retroreflective (long sensing range)	5m
CX-491 □ Retroreflective (with polarizing filters)	3m
CX-482 □ Retroreflective (transparent object sensing)	0.1 – 2m
CX-481 □ Retroreflective (transparent object sensing)	50 – 500mm
CX-422 □ Diffuse reflective (800mm type)	800mm
CX-421 □ Diffuse reflective (300mm type)	300mm
CX-424 □ Diffuse reflective (100mm type)	100mm
CX-423 □ Diffuse reflective (narrow-view)	70 – 200mm
CX-442 □ Adjustable range reflective	20 – 300mm
CX-444 □ Adjustable range reflective	15 – 100mm
CX-443 □ Adjustable range reflective	2 – 50mm
CX-441 □ Adjustable range reflective (small spot)	2 – 50mm

Output	NPN, PNP
Connecting method (note 1)	Cable type, M8 plug-in connector type, M12 pigtailed type
Cable length of cable type (note 2)	0.5m, 2m, 5m

Notes:

- 1.) Only the cable type and M8 plug-in connector type are available for the adjustable range reflective type.
- 2.) Only the 2m cable length type (standard) is available for the adjustable range reflective type.

Compact size

The sensors are compact in size at 11.2x31x20mm (WxHxD). The mounting pitch is also at the world standard size of 25.4mm.

Less processing

M8 plug-in connector type and M12 pigtailed type are available. This contributes to less time spent setting up. In addition, cable types are available with the following cable lengths: 0.5m, 2m, and 5m.

Less power consumed

By relentlessly developing our technologies, we have been able to considerably reduce our sensors' power consumption.

Less resources used

Based on environmental considerations, simplified packaging is used in order to reduce waste.

In addition, the bag is made of polyethylene, which produces no toxic gases even when burned.

CX-41□/42□/49□

Strong against oil and coolant liquids

The lens material for the thru-beam type, retroreflective type (excluding the CX-48□) and the diffuse reflective type is made of a strong acrylic that resists the harmful effects of coolants. These sensors can be used with confidence even around metal processing machinery that disperses oil mists. The protection mechanism also conforms to IP67 (IEC).

CX-44□/48□

Strong against ethanol

A strong, ethanol-resistant polycarbonate is used for the front and display covers. Safe even for installing near food processing machinery that disperses ethanol-based detergents. The protection mechanism also conforms to IP67 (IEC).

Strong against interference

The interference prevention function allows two sensors to be mounted close together.

Typical applications

Detecting cars on conveyor lines

Detecting transparent bottles

Detecting labels

Detecting transparent glass bottles

Thru-beam type CX-412□

Strong infrared beam

It realizes a 15m long-distance sensing range. Remarkable penetrating power enables applications such as package content detection.

Retroreflective type CX-493□

Strongest sensing range in its class

A long 5m sensing range is possible with the red LED type that is easy to align with the beam axis. Can be used for wide automatic door shutters.

Diffuse reflective type CX-423□

Beam axis alignment made easy

These sensors realize a high luminance red LED spot that provides bright visibility enabling the sensing position to be checked at a glance. Because it has the small spot, approx. 2mm, even the minutest object can be accurately detected.

CX-481□/482□

Introducing the transparent object sensing type sensor

Our unique optical system and transparent object sensing circuitry provide stable sensing of even thinner transparent objects than the conventional models.

CX-441/443□

Can sense differences as small as 0.4mm, with hysteresis of max. 2%

An advanced optical system provides sensing performance that is approx. 2.5 times more precise than conventional models. Even ultra small differences of 0.4mm can be detected accurately.

CX-44□

Not affected by color

Both black and white objects can be sensed at almost the same distances. No adjuster control is needed, even when products of different colors are moving along the production line.

CX-442□

BGS/FGS functions make even the most challenging settings possible!

Background suppression BGS

When object and background are separated.

CX-483□

Foreground suppression FGS

When object and background are close together.

When the object is glossy or uneven.

NX5

Sensor usable world-wide

Features

Multi-voltage

24 to 240VAC and 12 to 240VDC, suitable for supply voltages all over the world.

High reliability

The hermetically sealed output relay significantly increases its reliability.

Hermetically sealed relay eliminates worries about bad contact

Interference prevention

Two sensors operate normally even when mounted close together (excluding the 30m thru-beam type sensor).

Long sensing range

Suitable for conveyor lines and parking lot applications.

Typical applications

Multistoried parking

Detects if the car is protruding from the elevator door.

Golf driving range

The sensor detects the presence of a golf ball. The sensor is multi-voltage type so no DC power supply is needed.

Arresting shutter closing

The long sensing range sensor with a visible red beam can be used to control the shutter operation at the gate of a factory.

Arresting door closing

The sensor detects a person or an object and prevents the door from closing as long as its beam is interrupted.

CY-100

CY-100

Simple mounting with M18 thread

Features

■ Wide product range

The availability of a wide range of models within the series means the **CY-100** sensors can solve relatively complex tasks. Types with integrated polarization filters can even recognize reflective objects. The side view type makes applications possible in cramped spaces.

■ M18 Thread

All models have an M18 male thread for easy and quick mounting. Furthermore the models are also available for the M12 connector type. You can easily replace and add these standard models. The nuts are included in delivery.

■ Long sensing range

The thru-beam and retroreflective types of the CY-100 have a large sensing range of up to 15m.

■ Environmentally robust

Thanks to the IP67 (IEC) casing, the sensor is suitable for installation in humid and dusty environments. Integrated status LEDs allow the operator to check the function of the sensor at a glance.

Typical applications

Object detection

Detecting specular objects

Object counting

EX-Z

Features

■ Smallest laser sensor with a built-in amplifier

The extreme thinness of 3mm of the **EX-Z** series has been achieved by utilizing a new semiconductor packaging technology that does not use wire bonding. The small unit size allows the installation of sensors in a narrow space where only a conventional fiber sensor head could be installed before. As opposed to a fiber sensor, the EX-Z has a built-in amplifier, which also saves on installation space.

■ Easy to install

The clearly visible red light beam makes installation and beam alignment very simple. The 4-element LED provides a stable strong light over a long period of time.

■ Great performance in an industrial environment

With IP67 degree of protection, the EX-Z can be installed in environments where water is used or splashed¹. For this type of application, there are rustproof mounting brackets available in stainless steel and plastic.

¹ If water splashes on the sensor during sensing operation, the sensor may detect the water as an object

EX-Z

Miniature thru-beam sensor with built-in amplifier

Front sensing

Approx.
50% smaller
than EX-10

EX-Z1□F□
H14×W8×D3 mm

Side sensing

Approx.
35% smaller
than EX-10

EX-Z1□
H15.9×W5.5×D6.5 mm

■ Sensing extremely small objects

Thanks to the integrated slit mask, the sensor can detect objects with a diameter of as little as 0.3mm. Even at a distance of 500mm, the sensor is capable of reliably detecting objects as small as 1mm.

Detection of parts in parts feeder

Detection of presence / absence of test tubes

Detection of LED contacts

Mounted on robot arm

EX-10

EX-10

The slimmest: 3.5mm thick

Features

■ Optimized precision optics

The enhanced EX-10 series offers a more precise light beam compared with the other standard models. Now you can realize an even more space saving installation, because no additional tools like slit masks are needed to prevent interferences. It is no problem to detect smallest objects with a diameter of 0.5mm.

■ Sensing range 1m: EX-19□

■ High-speed response time: 0.5ms

The sensor EX-10 with a response time of only 0.5ms is especially suitable for detecting small and high-speed traveling objects.

■ Flexible setup

The EX-10 sensor is available as front sensing or side sensing type, allowing for flexible mounting in the narrowest of spaces.

■ 2-color indicator

A convenient bright, 2-color indicator has been incorporated in the miniature body. You can check the available power supply and current output operation at a glance.

■ Freely mountable fingertip size

Freely mountable; dimensions 10x14.5x3.5mm (WxHxD) (Thru-beam type, front sensing). Moreover, easy alignment is possible with the visible red LED beam source.

Typical applications

Detecting the float for a flow meter

Seating confirmation fiber

Detecting small parts such as screws

Sensing PCB rack screws

EX-20

EX-20

Miniature-sized and still mountable
with M3 screws

Features

■ Long sensing range

The **EX-20** series achieves long distance sensing [thru-beam type: 2m, retroreflective type: 200mm (when using the attached reflector), diffuse reflective type: 160mm], despite its miniature size. Hence, it is usable even on a wide conveyor.

■ Clear beam spot using red LED dot light source

The emission area of a dot light source is smaller than that of a conventional LED flat light source. It is possible to design a high power, narrow beam. Since a red LED dot light source is used, the red beam spot is clearly visible even at a long distance so that the alignment and confirmation of the sensing position is easy.

■ Less power consumed!

By relentlessly developing our technologies, we have been able to considerably reduce our sensors' power consumption.

Typical applications

Checking protrusion of wafer

The ultra compact photoelectric sensor EX-23 has a sufficiently long sensing range of 2m. Further, its visible red LED beam makes beam alignment very easy.

Detecting tape feeder cassette out of position

Ultra compact in size with an ample sensing range of 2m, ideal for monitoring tape feeder cassettes that are out of position.

Detecting fill-up of parts in feeder

The sensor setting can be finely adjusted since a universal sensor mounting bracket is available, with which the height and the angle of the sensor can be freely adjusted.

EX-30

EX-30

An alternative to fiber sensors

Features

■ An alternative to fiber sensors

The **EX-30** series can be screw-mounted (M4 for thru-beam type, M6 for reflective type). This means that they can be inserted into production lines in exactly the same way as conventional fiber sensors.

■ 800mm thru-beam type available

The sensing range is 1.5 times greater than previous models! It also has a sensitivity adjuster to enable compatibility with a wide range of applications.

■ Less power consumed!

By relentlessly developing our technologies, we have been able to considerably reduce our sensors' power consumption.

Typical applications

Detecting quantity of labels in label magazine

Detects the remaining amount of labels by the thickness of the roll.

Detecting ICs

Detects whether ICs are accurately placed in IC trays.

Resin bottle detection

The EX-32A threaded photoelectric sensor confirms the arrival of bottles.

Technical specifications

Type		Thru-beam			Diffuse reflective

PM-25/45/65

PM-25/45/65

Enables equipment miniaturization
and quick construction

Features

■ Increased beam emitting / receiving distance of 6mm

The beam emitting and receiving sections are 0.5mm thinner compared to our conventional models although the external dimensions have not changed. As a result, the distance between the beam-emitting and the beam-receiving point increased by 1mm. The wider distance means less possibility of collision with the object to be sensed.

■ Beam marks for easy adjustment

There are marks on the front and back of the sensor to indicate the upper and the lower limit of the beam axis. This makes it easy to adjust the position of the object to be sensed.

■ Large and easy-to-see operation indicator

The large operation indicator (orange) lights up when an object enters the beam axis. The indicator is easy to see from any angle – even from above and from the sides.

Typical applications

Positioning of a pallet

Sensing the starting point on a rotating body

PM2

Convergent reflection sensing
ensures stable detection

Features

■ Stable detection by convergent reflective mode

The stable detection characteristics of the **PM2** series are obtained since it is a convergent reflective type and senses a limited area. Thus regardless of the background, stable detection is possible.

■ Not affected by background

Even a specular background does not affect the sensing performance if the sensor is located 30mm away from it (when directly opposite).

■ Dark object detectable

Since the sensor is very sensitive, it can detect even a dark object of low reflectivity.

■ Object to be sensed

A 0.05mm copper wire can be detected at a distance of 5mm.

Typical applications

Minute object detectable

Starting point and overrun is sensed using the dog on the base

Detecting capacitors in tray

The convergent reflective type sensor reliably detects capacitors in a tray without being affected by their color, characters, marks or glossiness.

EQ-500

Long range sensing capability
up to 2.5m

Features

■ Impervious to variations in color or angle

Due to its advanced optical system, the sensor is not affected by variations in the object's angle or gloss as compared to conventional sensors. Moreover, sensing can be performed at a somewhat constant distance even if the sensing object is black or white.

■ Not affected by background objects

Due to the 2-segment photodiode adjustable range system, the sensor does not detect objects outside the preset sensing field. It will not malfunction even if someone walks behind the sensing object, or machines or conveyors are in the background.

■ An easy-to-set adjuster with indicator

Equipped with a 2-turn adjuster with indicator making it easy to set for short or long distances. **EQ-500** series can function with 24 to 240V AC and 12 to 240V DC. Therefore, almost any power supply anywhere in the world will work.

■ Equipped with BGS/FGS function

We have added a DC-voltage type with NPN and PNP transistor outputs, all in one sensor. Its BGS/FGS function controls any background effects for more stable sensing.

■ Convenient timer function models

Types with an ON-delay/OFF-delay timer available. (EQ-5□T)

- › Operation: ON-delay OFF-delay
- › Timer period: 0.1 to 5s (individual setting possible)

■ Little affected by contamination on lens

Even if the lens surface gets somewhat dirty from dust particles, there is very little change in the operation field, rendering stable and consistent detection even for particles appearing close to the front surface of the unit.

■ Convenient terminal block type

Cabling is enabled by way of a terminal block.

EQ-30

Unaffected by color or material,
2m distance adjustable
fixed-focus sensing

Features

- Not affected by object color or background
- Long sensing range 2m
- Compact size

The **EQ-30** saves space since a miniaturized housing of 68x20x40mm (HxWxD) has been designed.

- **Plug-in connector type**

The plug-in connector type (M12) of the EQ-30 series can be easily disconnected for replacement.

NA1-11

Cross-beam scanning system to detect slim objects

Features

■ **Letters, postcards can be detected**

Thin objects can be detected by using the cross-beam scanning system.

■ **Beam pitch: 10mm**

Object to be sensed size of $\varnothing 13.5\text{mm}$ is realized by using a beam pitch of 10mm.

■ **Long sensing range**

Though very slim, a wide sensing area of 1m length and 100mm width is realized. It is most suitable for object detection on a wide assembly line or for detecting the dropping of or incursion by small objects whose travel path is uncertain.

■ **Clearly visible large indicator**

A clearly visible large indicator having a 55mm width is incorporated on both the emitter and the receiver.

Cross-beam scanning system

Typical applications

Detecting postcards

NA1-11 can detect thin postcards due to its crossbeam scanning system.

Detection of haphazardly falling objects

Technical specifications

NA1-PK5/ NA1-PK3

Pick-to-light sensor –
Ultra-slim body

Features

■ 10 mm thick: half the thickness of conventional models
Space saving now possible; ultra-thin design does not obstruct picking operations.

■ Two unit installations are possible
Sensor units can now be set to different light emission frequencies in order to prevent mutual interference.
Two units can now be operated in a side-by-side configuration without interference for problem-free detection over wide areas.

Cable can be freely arranged in any position

■ Lighting pattern selectable
The job indicator operation can be selected as either continuous lighting or blinking.

■ Selectable detection operation
Sensor units can be set to detect the interruption of 1 beam channel or 2 or more beam channels.

Continuous lighting

Blinking

Single beam interruption

Double beam interruption

All opaque bodies with $\varnothing 35\text{mm}$ or greater will be detected.

The accidental passage of small objects through the beam axis will not trigger detection, yet the operator's hands will always be accurately detected. This function is also useful when small objects regularly interrupt the beam axis.

NA1-PK5/
NA1-PK3

Typical applications

Cell production line

Assembly line

FX-100

FX-100

Excellent price/performance ratio

Features

■ Easy to read

The digital dual display allows you to check both the threshold value and incident light intensity at the same time. It also makes the procedures for setting the various values much easier.

■ Multipurpose M8 connector type

The connectors used are commercially available M8 connectors, so that processing costs and lead time required for carrying out processing can be greatly reduced.

■ Designed in a 3-layer structure to accommodate basic through advanced settings

Setting details are divided into three levels for clearer operation, so that settings for normal operation are made in 'RUN mode', basic settings are made in 'SET mode', and advanced functions are set in 'PRO mode'. This makes setting operations much easier to understand and carry out.

Typical applications

Wafer detection

Detects wafer carrier cases through vacuum chamber's view port.

Wafer detection

Sensing possible in corrosive environment. Lenses at the ends of the fiber heads expand the sensing range.

Detection of breaks / cracks of glass

Detection over long ranges

Detection of glass substrate in vacuum chamber

Detection of glass substrate

FX-301

FX-301

Enhanced functions
- strong performance
- easy to use

Features

■ FX-301(P) (red LED type) version upgrade

We improved the standard model by enhancing its sensing stability and equipping it with handy functions such as the light-emitting amount selection function.

■ Super high-speed response of 35 μ s

The **FX-301(P)-HS** model is the digital type fiber sensor realizing a super high-speed response of 35 μ s rendering it capable of sensing minute objects moving at high speeds.

■ Stable sensing over long and short periods

In addition to a four-chemical emitting element which suppresses changes in the light-emitting element over time so that a stable level of light emission can be maintained over long periods, a new APC (Auto Power Control) circuit has also been adopted. Because fluctuations over short periods of time have also been suppressed, stable sensing is possible very quickly once the power is turned back on after setup changes.

■ Sensing range has been greatly increased

All models use a double coupling lens that enables a much wider sensing range and maximization in the light emission efficiency. Sensing ranges with small diameter fibers and ultra small diameter fibers, which have become very popular due to the miniaturization of chip components, have been increased by 50% over previous values achieved with other amplifiers.

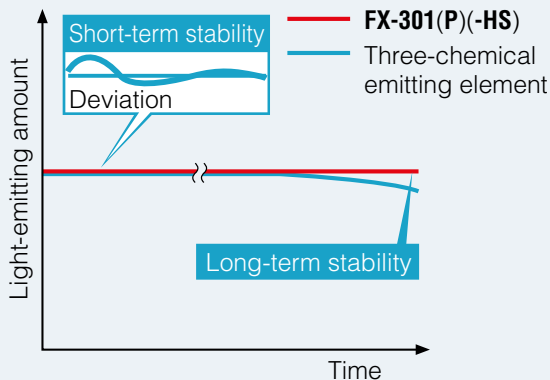

FX-301 series
double
coupling lens

Conventional fiber sensors
(no lens)

Stable sensing comparison

Typical applications

Workpiece detection

This standard type of FX-301(P)(-HS) using red light has a four-chemical emitting element for stable sensing over long periods.

Sensing translucent stickers

The blue LED type greatly reduces the damping rate, making it ideal for delicate sensing for yellow/red transitions.

Register mark detection

The green LED type greatly reduces the damping rate, making it ideal for delicate sensing.

Sensing film meandering

Infrared LED type is ideal for sensing environments with light restrictions, such as places where light-sensitive film is being handled.

Object sensing during the painting process

Due to a sensing range of 19.5m (FX-301 long range mode) and a 10m fiber length, it can be lead through rough environments freely.

Engine block passage confirmation

FD-WKZ1 has realized a sensing range of 480mm (FX-301 long range mode). In addition, due to its powerful beam, it can even work in adverse environments such as in areas prone to dust.

Wire breakage detection

Wide beams are ideal for moving wire detection.

FX-311

FX-311

Remarkably easy to use

Features

■ 12-turn potentiometer with visible indicator

12-turn potentiometer has been incorporated for fine adjustments. It enables very fine differences to be detected. Since the potentiometer is illuminated, you can even make adjustments easily in dark areas.

■ Three light source types (red, green, blue) are made available for expanding applications

Rapid blinking 'assist function' eases adjustment for optimum sensitivity.

Typical applications

Detecting transparent PET bottles

The green LED type is ideal for stably sensing objects such as transparent bottles which yield only small amounts of light fluctuation.

Register mark detection

The blue LED type can accurately sense yellow marks on white backgrounds that are difficult to sense using the red LED type.

Technical specifications

Model no.	NPN output	FX-311
	PNP output	FX-311P
Supply voltage	12 to 24VDC ±10%	
Power consumption	Max. 840mW (Current consumption max. 35mA at 24V supply voltage)	
Response time	Max. 250µs (STD / S-D), max. 2ms (LONG) selectable with selection switch	
Output	PNP / NPN open-collector transistor, max. 100mA	
Output operation	Selectable either Light-ON or Dark-ON, with selection switch	
Short-circuit protection	Incorporated	
Operation of indicators	Orange LED (lights up when the output is ON)	
Timer function	Incorporated with OFF-delay timer, selectable either effective (approx. 10ms or 40ms) or ineffective	
Automatic interference prevention function	Incorporated (Up to 4 sets of fiber heads can be mounted closely.) (note 1)	
Ambient temperature	-10 to +55°C (if 4 to 7 units are mounted close together: -10 to +50°C; if 8 to 16 units are mounted close together: -10 to +45°C (no dew condensation or icing allowed))	
Emitting element	Red LED	
Material	Enclosure: Heat-resistant ABS, Case cover: polycarbonate	
Connection method	Connector (note 2)	
Dimensions (HxWxD)	34.5x10x70.5mm	

Notes:

- 1.) When the power supply is switched on, the light emission timing is automatically set for interference prevention
- 2.) The cable for amplifier connection is not supplied as an accessory. Please select under accessories (page 129)

Accessories

FX-500/550

Features

Optimized stability

When used with the super quality fiber as a set, the incident light intensity variation among units is decreased to only 1/4 of that of conventional models.

High performance

The FX-500 with its ultra high response time improves of 25µs productivity.

HYPER mode incorporated

FX-500 in combination with the small diameter fiber can handle challenging detections over a super long sensing range.

Improved accuracy!

FX-500 with its accurate detection catches fractional difference in light intensity, fulfilling high precision and low-hysteresis applications.

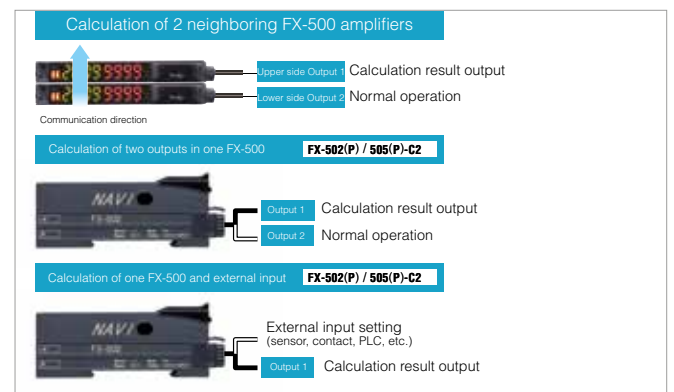

No PLC necessary, saving material and programming costs

Logical operation of sensors

Three logical calculations (AND/OR/XOR) are selectable using Output 1 of multiple FX-500 series amplifiers. You can logically connect two outputs of an FX-500 or one input of a normal sensor to the output of an FX-500 sensor.

Analog output cable type FX-505

The sensor outputs an analog signal of 4-20mA in proportion to digital value displayed for the current light intensity received.

Edge tracking of film or sheet

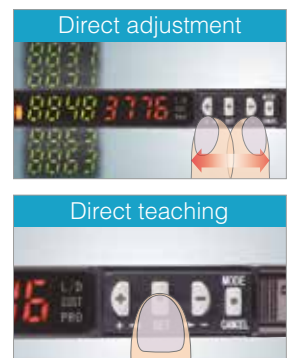

Drifting path can be tracked as the light intensity changes.

Direct settings

Direct adjustment: Threshold values can be changed directly in RUN mode.

Direct teaching: Teaching can be done in RUN mode. Just press the SET button once for object "present" and "not present".

Typical applications

Counting of IC pins

Check crimping

Glass substrate sensing

■ Stable light intensity

Optical **fibers** with insertion plug-in achieve a very high quality standard. Through the integrated high-precision plug, the fiber core can be centered to within $\pm 40\mu\text{m}$. Variation in light intensity could thus be reduced to $\pm 10\%$.

■ New fiber core

Now the core consists of only one fiber instead of several single fibers. This design improves sensing stability dramatically because there is no variation in light intensity among individual fibers.

New

Old

■ Sharp bending and flexible fibers

With a bending radius of 4mm, the optical fibers easily cope with millions of bending cycles.

Fibers with
integrated high-
precision plug

Thru-beam type (one pair set)

Type	Shape of fiber head (mm)	Model no.	Bending radius	Fiber cable length	Sensing range (mm)			Beam axis dia. (mm)	Protection	Ambient temperature

Thru-beam type fiber

Model no.	Picture	Description	Applicable fibers
FX-LE1		Expansion lens increases the sensing range by 5 times or more, ambient temperature: -60 to +350°C (note 1, 2)	FT-43, FT-42, FT-42W, FT-45X, FT-R40, FT-R43, FT-H35-M2, FT-H20W-M1, FT-H20-M1, FT-H20-J50-S, FT-H20-J30-S, FT-H20-J20-S
FX-LE2		Expansion lens increases the sensing range by 6 times or more, ambient temperature: -60 to +350°C (note 1, 2)	
FX-SV1		Side-view lens, beam axis is bent by 90°, ambient temperature: -60 to +300°C (note 1, 2)	
FV-LE1		Expansion lens for vacuum fiber increases the sensing range by 4 times or more, ambient temperature: -60 to +350°C (note 1, 2)	FT-H30-M1V-S
FV-SV2		Vacuum resistant side-view lens, beam axis is bent by 90°, ambient temperature: -60 to +300°C (note 1, 2)	

Notes:

- 1.) Consider the ambient temperature of the fibers to be used in combination
- 2.) Please test the functionality after mounting the lenses

Reflective type fiber

Model no.	Picture	Description	Applicable fibers
FX-MR1		Pinpoint spot lens, distance to focal point 6±1mm, spot diameter Ø 0.5mm, ambient temperature -40 to +70°C (note 1, 2)	FD-42G, FD-42GW
FX-MR2		Zoom lens, screw-in depth (7-14mm), distance to focal point (18.5- 43mm), spot diameter Ø 0.7-2mm, ambient temperature: -40 to +60°C (note 1, 2)	
FX-MR3		Extremely fine spot, distance to focal point: 7.5±0.5mm, spot diameter: FD-EG31 Ø 0.15mm/ FD-EG30 Ø 0.3mm/ FD-42G, FD-42WG, FD-32G, FD-32GX Ø 0.5, ambient temperature: -40 to +70°C (note 1, 2)	FD-EG31, FD-EG30, FD-42G, FD-42GW, FD-32G, FD-32GX

Notes:

- 1.) Consider the ambient temperature of the fibers to be used in combination
- 2.) Please test the functionality after mounting the lenses

Communication units

Communications units for flexible solutions

Functions

Function handy for startup and maintenance

Using a PLC or PC, this communication unit not only facilitates inputs (teaching, bank switching) to a digital fiber sensor e.g. FX-301(P), but also received-light amount and output status verifications greatly enhance workability during startup and maintenance.

Intuitive integration at the controller level

Rapid integration at the controller level enables reliable monitoring, remote maintenance or remote control via open networks. Several units can be configured with minimal wiring efforts. Data can be saved centrally, where it can be archived or used for evaluation purposes.

Combining different units

The ability to combine different sensor types, e.g. laser sensors, pressure sensors or digital fiber-optic sensors, opens up many application areas, especially for special purpose machinery manufacture. The sensors themselves communicate with each other via an infrared interface.

LX-100

Introducing the 3-LED mark sensor

Functions

■ Equipped with 3 LEDs: red, green and blue

To detect any marking, this sensor is equipped with red, green and blue LED light emitting elements all in one. In addition, it uses a coaxial reflective optics system and realizes high precision sensing when used with a 1/4000 resolution 12-bit A/D converter.

■ 2 selectable sensing modes for any application

Mark mode: This sensing mode automatically selects a single color from the 3 R-G-B LEDs to realize an ultra quick 45 μ s response time. The automatic optimal LED selection function automatically selects the LED that is most suitable for the sensing. This function is perfect for ultra quick sensing.

Color mode: All 3 R-G-B LEDs light up and high precision mark color discrimination occurs using the R-G-B reflective light ratio. This function enables effective detection of films with patterns around the areas of the mark.

■ Even beginners can quickly master MODE NAVI operation

The sensor's basic operations are represented by 6 indicator lamps (MODE NAVI). The user can check what mode the sensor is presently in with a quick glance rendering operation simple.

Sensing status digitally controllable

The sensing status, displayed numerically, can be verified at a glance. Also, the sensor settings for each type of packing film can be digitally indicated.

Direct codes enable settings verification at a glance

The settings for the LX-100 series sensors are displayed using a 4-digit direct code. Direct codes enable easy settings verification and maintenance by phone.

Super simple teaching

Teaching (setting the threshold value) is simple, even in "Mark Mode" or "Color Mode". In addition, because teaching via an operation panel or other external input device is also possible, models can be easily interchanged.

Compact design for significant space savings

Cable and plug-in connector types are available depending on the equipment used. These sensors can be easily integrated into already existing systems.

Typical applications

Tube positioning

Detects printed marks to align tubes.

Mark detection

Mark detection of packaging film.

Technical specifications

Type		Cable	M12 plug-in connector type
Model no.	NPN output	LX-101	LX-101-Z (note 1)
	PNP output	LX-101-P	LX-101-P-Z
Sensing range	10±3mm		
Power supply	12 to 24VDC ±10%		
Output	2 x NPN or 2 x PNP open-collector transistor; max. 50mA		1 x NPN or 1 x PNP open-collector transistor; max. 100mA
Output operation	Mark mode: Light-ON/Dark-ON (auto-setting on teaching) Color mode: Consistent-ON/Inconsistent-ON (setting on teaching)		
Response time	Mark mode: max. 45µs; color mode: max. 150µs		
Sensitivity setting	Mark mode: 2-level teaching/Limit teaching; Color mode: 1-level teaching		
Protection	IP67 (IEC)		
Ambient temperature	-10 to +55°C		
Emitting element	Combined red/green/blue LED (Peak emission wave length: 640nm/525nm/470nm)		
Connection method	Cable 2m		M12 connector (note 2)
Dimensions (HxWxD)	35×24×57mm		35×24×71.5mm
Accessories	M4 screws with washers, 2 pcs.

EX-L200

EX-L200

Miniature laser sensor with
a built-in amplifier!

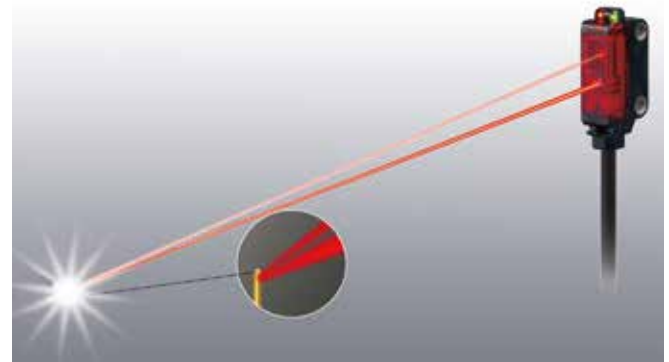

Features

■ Minute object sensing type EX-L211 (thru-beam)

The beam of the **EX-L200** series is purposely widened to have a lower beam density and little beam spread so that when detecting minute objects, even a slight change in the light received intensity will not be missed.

■ Minute detection (reflective)

With a repeatability of 0.02mm the sensor is perfectly suited for positioning tasks.

■ Environmental resistance

Thanks to the IP67 casing, the sensor is suitable for installation in humid and dusty environments.

■ Easy alignment

Beam alignment is carried out by looking at the red spot reflected on the beam alignment screen to match with the actual object. The optimum position can be understood at a glance by looking at the beam alignment screen and stability indicator (green).

Easy adjustment by reflecting the shadow of the detection object.

Typical applications

Detecting ICs that are out of position in multiple palettes

Detecting the tip of a very thin pipe

Detecting objects from an opening

Detecting very small objects

Technical specifications

LS-400

Features

■ 4 types of identically sized sensor heads available

They are approximately the same size as general purpose photoelectric sensors, and the mounting method is identical.

■ Coaxial reflective type with a long sensing range of 30m

The introduction of the LS-H92 long sensing range coaxial reflective type sensor means that even longer sensing ranges are now possible.

■ Spot size adjustment

The long sensing range spot reflective type and long sensing range line reflective type have a built-in spot-size adjuster that enables spot size adjustment according to the object for optimal setting.

LS-400

User-friendly, advanced high precision laser sensing!

■ Accurately senses the minutest variations

When sensing at close range or when the target objects are transparent or minute, adjust the sensor receiving sensitivity to one of 3 levels for the optimal setting. In addition, changing the receiving sensitivity will not affect the response time.

■ Easy setting, dual display

Equipped with 2 large 4-digit digital displays. While checking the current light-receiving amount (red display), the optimal threshold value (green display) can be set easily.

■ Wiring and space savings

The quick-connection cables enable reductions in wiring (connector type). The connections and man hours for the intermediate terminal block setup can be reduced and valuable space saved. Also LS-400 series amplifiers can be connected side-by-side with FX-300/FX-500 series fiber sensors.

Typical applications

Interference prevention

The automatic interference prevention function protects against interference among up to 4 sensors.

Emission halt function

Using the emission halt function, the laser beam can be stopped via external input, e.g. when a spot appears within the visual range of an image processor.

External teaching function

Teaching can be conveniently performed externally for laser sensors installed inside a device.

IC pin check from remote position

Checking protrusion of glass substrate

Technical specifications

■ Sensor heads

Type	Coaxial retroreflective		Diffuse reflective	
	Standard	Long sensing range type	Long sensing range spot-reflective	Long sensing range line reflective

LS-500

LS-500

Miniature laser head with
user-friendly amplifier

Features

■ Different sensor heads available

The **LS-500** series of laser sensors offers four different laser heads. Select the appropriate shape of the heads depending on the requirements of your application.

■ Robust sensor head

The robust sensor head is made of stainless steel and can be used under rough mounting conditions. The type with M6 screws is mountable even in the smallest spaces. You can check immediately with the LED indicator at the receiver whether the light is received correctly.

■ Highest precision

With the help of the coaxial precise light direction, the object sensing can be executed even through smallest openings. With a beam diameter of max. 6mm the retroreflective type has a sensing range of up to 2.5m.

■ Multifunctional amplifier

The LS-500 series amplifier with its clearly laid-out display offers a user-friendly design. The definition of settings, such as the adjustment of threshold values, database and logic functions, is quite simple. The model with the analog current output provides a comfortable reading out of measurement values.

■ Easy to combine

Due to its design and the possibility to mount the sensor on a DIN rail, the LS-500 can be connected quickly and easily to other sensors such as fiber amplifiers or pressure sensors.

Typical applications

Position control of a workpiece

Detecting marks in a mold

Detecting workpieces through a worktop

Detection of a transparent foil

SF4D

SF4D

Typ 4 · PLe · SIL3

Robust safety light curtain

Features

■ Easy installation of emitter and receiver thanks to improved optical properties

Thanks to a higher emission power, the **SF4D** not only works reliably on shorter distances, but also covers a longer sensing range up to 15m.

■ Twisting- and bending-resistant design

The new interior design makes the safety light curtain more rigid and thus more robust. The SF4D does not bend or twist as easily when it comes into contact with other objects.

Resists twisting

Resists bending

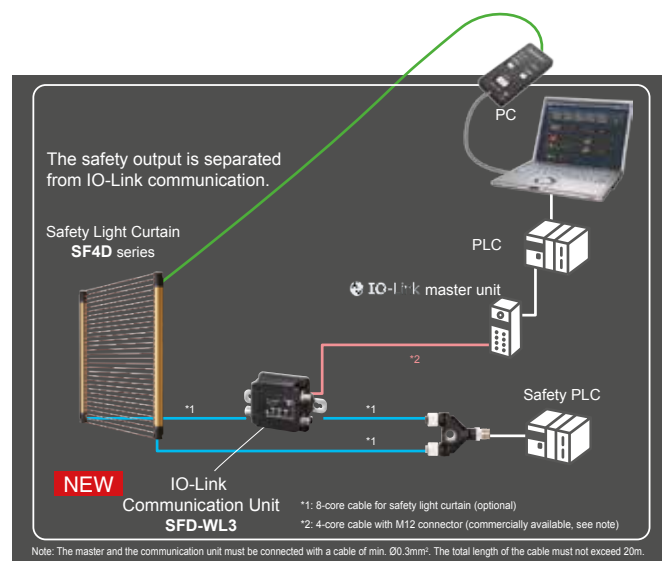

Resists shock

■ Main functions

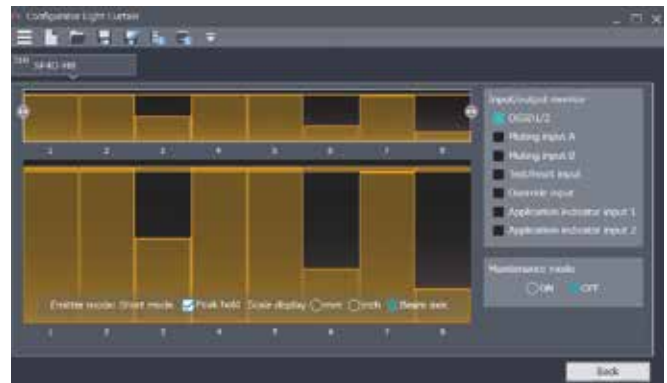

- › Operation monitoring
 - » Monitoring of the incident beam intensity and extraneous light
 - » I/O monitoring
- › Error history display
- › Light blockage history, unstable light incidence history
- › Muting setting function
- › Override setting function
- › Blanking setting function (both fixed and floating blanking)
- › External device monitoring setting function
- › Auxiliary output setting functions

Which functions are available depends on the synchronization method and the type of cables (5-core, 8-core, 12-core) used.

Selection of light curtain

Monitoring of received light intensity and extraneous light during operation

Typical applications

Serial connection of 5 safety light curtains for roboter housing

Automobile production with muting

SF4B (V2)

Type 4 · PLe · SIL3

New concepts combining greater safety and higher productivity!

Features

■ Sensor height = protective height

The length of the main unit equals the protective height so that installation is possible in places where space is limited. No blindzone occurs at the joints between light curtains when light curtains are connected in series.

■ Finger/hand and arm/foot protection available

■ Response time of 14ms and constant safety distance

A fast response time of 14ms has been achieved regardless of the number of beam channels, the beam axis pitches and the number of units connected in series. This reduces calculation work required for the safety distances.

■ A muting control function is provided to increase both safety and productivity

The light curtain is equipped with a muting control function that causes the line to stop only when a person passes through the light curtain, not when an object passes through.

■ Built-in safety relay

The light curtain has a built-in external device monitoring (EDM) function and an interlock function. The safety circuit is constructed so that a separate safety relay unit is not needed, and the control board is also more compact, both of which contribute to lower costs.

■ Improved ambient light immunity

The integrated ELCA function (Extraneous Light Check & Avoid) prevents interference from ambient light or other light curtains and even from welding plants.

■ Digital error indicator

If an error occurs, details of the error appear on the digital display so that maintenance can be carried out more quickly.

■ Universal design that can be used anywhere in the world

The SF4B series combines PNP transistor output and NPN transistor output in a single model. Overseas equipment that uses PNP, replacement with NPN sensors, factories that are positively grounded, and transfer of equipment overseas are all situations where the control circuits for a single model are suitable for use worldwide.

SF4B-C

SF4B-C

Type 4 · PLe · SIL3

Mounts flush on aluminum frames

Features

■ Compact size

The **SF4B-C** series has been designed to mount flush with the aluminum frame. This means the machine opening will not be made any narrower. It can even be installed with zero blind zone.

■ Easy mounting on aluminum frame

Buried mounting (side)

The light curtain mounts flush, even in installations with buried mounting.

- › There is no risk of workpieces bumping into the light curtain.

Rear mounting

- › The light curtain fits onto a 20 × 20mm aluminum frame perfectly.

■ The SFB-HC handy controller (optional)

offers easy access to settings for a range of functionality.

■ With the pigtailed type, the large indicator is easy to see also from the side

The SF4B-C series incorporates a large multi-purpose indicator (orange) positioned at workers' eye level. The indicator signals the presence of the light curtain, helping to prevent stoppages due to inadvertent interruption of its beams. The indicator can be used in a variety of applications, including as a muting indicator or operation indicator. The large multi-purpose indicator shines brightly through the plastic body to ensure exceptional visibility from the side.

Technical specifications

SF4C

Type 4 · PLe · SIL3

Ultra-slim light curtain safeguards
machines without sacrificing
productivity

Features

Large, built-in, multi-purpose LED indicators

Large LED bars on each side of the light curtain provide a wide visibility indicator that can be customized for various applications by means of independent external inputs. The indicator can be used as an operation indicator (muting) or job indicator, etc.

Finger/hand protection

The **SF4C** series covers a sensing height of 160mm to 640mm. This is true for the finger and hand protection types (resolution up to 10 or 20mm).

Can be used in a variety of applications for simplified equipment (large multi-purpose indicator)

Wire-saving when connecting to safety devices. Contact outputs such as emergency stop switches or safety door switches can be connected to the light curtain. Also, by using the handy-controller **SFC-HC**, up to three sets of light curtains can be cascade connected for a consolidated safety output.

IP67 (IEC)

An IP67 (IEC) rating is achieved with an ultra-slim size for protection from environmental factors.

Mutual interference is reduced without need for interference prevention lines

The light curtain is equipped with the ELCA (Extraneous Light Check & Avoid) function, which has been proven to be strong against mutual interference. Because it automatically shifts the scanning time of the light curtain in order to avoid interference, it is not necessary to wire interference prevention lines between machinery.

A fast response time of 7ms* for all models

A fast response time of 7ms* for all models regardless of the number of beam channels. This reduces the safety distance as well as the calculation work required for the safety distance among models with different beam channels.

* When connecting safety sensors (light curtains, etc.) to the safety input, the response time will be the total time of connected units.

Safety, productivity, and cost reduction [muting control function]

The muting sensors and muting lamps can be connected directly to the light curtain. Furthermore, the large multi-purpose indicators can be used as muting lamps, which contribute to less wiring troubles, improvement of safety, productivity, and cost reduction.

Typical applications

Use of internal muting lamp

There is no need to buy and install a separate muting lamp.

Selective muting area

Separate muting control function for each beam channel.

Industry first!

Wire-saving when connecting to safety devices (safety input function).

Safety category 2

Excellent basic functions at a reasonable price

Besonderheiten

■ We also offer safety light curtains with safety category 2

- › Protective height: 160 to 1912mm
- › Sensing range: 0 to 13m
- › Response time: max. 15ms (ON → OFF)
- › Arm and hand protection type
- › Integrated status LEDs and display
- › Series connection without blind zone
- › Features: Interference suppression, series connection, emission halt function

■ Arm / foot protection type SF2B-A□

Min. sensing object \varnothing 47mm
(beam pitch 40mm)

■ Hand protection type SF2B-H□

Min. sensing object \varnothing 27mm
(beam pitch 20mm)

Typical applications

Protection against malfunction caused by extraneous light

Protection against mutual interference thanks to interference prevention

Customization of automation products

Panasonic has been perfecting the art of customization for over 10 years. Our experts work with customers, engineers, and purchasing and logistic departments to configure the most suitable customized solution in terms of product modification, packaging, labeling, pre-assembly and other features. High quality is assured thanks to multiple product tests that are conscientiously documented. Customized automation products can reduce your production costs, avoid production errors, and improve the quality of your final product.

- › Customized cabling and interfacing
- › Application specific setting of sensors
- › Re-packaging for immediate customer use
- › Sensors bundled with PLC/HMI as a solution
- › Customer specific mounting of connectors on Panasonic Industry sensors

SG-P

SG-P

Non – contact safety door switch

Features

■ High visibility

Door switches installed on the inside of doors are difficult to see from the outside, so it is hard to check whether the doors are open or closed. The **SG-P** series units are highly visible from the outside, thus allowing reliable confirmation. The SG-P series eliminates the need to install switches on the outside of equipment, and it contributes to the simplification of equipment

For frame-less doors

Compact type: SG-P1010-□ / SG-P2010-□

■ No prior pairing

Each switch body and actuator can be easily paired by bringing them close to each other and supplying power during the initial setup. When the units are cascade-connected, turning on the power completes the pairing procedures in a batch, thus reducing the man-hours required for the setup.

■ High-code actuator

Intentional deactivation of a safety switch can lead to a serious industrial disaster. The SG-P series high-code models detect only the paired actuators. They support the ISO 14119 coding level (High Level Coded Actuator) and prevent intentional deactivation of safety switches.

■ 30 units in series

Previously, when cascade connection is used, extra man-hours are required for connecting wires to the switches for linked operation. When the SG-P series is installed, the standard model serves as a master unit and outputs safety signals (OSSD1 / 2) in a batch. No extra wiring work is necessary for cascade connection of the sub units that serve as slave units. A maximum of 30 units can be connected, thus contributing to the reduction of equipment wiring work.

Large and bright indicators notify the open / Closed conditions of machine room doors

When any of the safety switches connected in series enters a non-detecting state, the flashing function activates the

indicators of all other safety switches to flash in green to notify the operator.

Type 4 · PLe · SIL3

Cascadable thru-beam sensors

Features

■ Series connection of six sets of sensor heads to one controller

The concept of connecting six sets of sensor heads to one controller in series offers you maximum flexibility to solve your safety application.

■ Beam axis alignment and operation confirmation

The beam interruption indicator is incorporated in both the emitter and receiver. This indicator can be used not only to confirm operation but also to align the beam axis.

■ Compact sensor head saves space

The size of this type 4 long sensing range type is similar to general purpose photoelectric sensors.

■ IP67 (IEC)

The sensor heads can be used safely even in rough production environments.

■ Interference prevention

The emission amount adjuster can be used to prevent interference to the surrounding sensors.

■ Supports both PNP and NPN polarities

A single unit supports both PNP and NPN polarities, easing stock management.

Emission amount adjustment function

Typical applications

Protection for long sensing ranges

Guard areas up to 15m in length, for example where protective fences are difficult to install.

Protection for small openings

For small openings where light curtains do not fit, ST4 sensor heads ensure safety.

Protection against non-authorized entry

Sensor heads can be mounted flexibly and muting control implemented easily.

SF-C21

Control unit for multiple safety solutions

Features

Space-saving and easy to wire

- › One **SF-C21** can do the work of four safety relay units.
Input: 10 points / Output: 8 points
- › Compact size
(height 97 mm × width 45 mm)

Application-based customization

- › Easy to create reliable safety circuit
- › Configurator SF-C software to build own safety circuits

Absolutely no programming skills required

- › Eight preset logics, safety-certified and compatible to control category 4 PLe
- › The OFF delay time can be easily set by turning the rotary switch
- › Password protection prevents inadvertent changes to the logic

Easy to monitor status with a PLC

- › Four auxiliary outputs are provided
- › RS-485 communications (MODBUS RTU)

Safety input	2 × 4 inputs (ON □ OFF max. 0.7ms; OFF □ ON max. 10ms)	
Safety control output	PNP open-collector transistor with 2 outputs × 2 (ON □ OFF max. 10ms; OFF □ ON max. 100ms)	
Auxiliary output	PNP open-collector transistor with 1 output × 4 (Any of the auxiliary outputs can be customized using the software tool)	
Logic selection function	No. 0: Customization control No. 2: Parallel muting control No. 4: Partial stop control 1 No. 6: Two-hand control No. 8: Operation mode selection control	No. 1: Overall stop control No. 3: Sequential muting control No. 5: Partial stop control 2 No. 7: OR control
Communication	RS-485: Detachable spring-cage terminal block, USB: Mini-B male	

Note: We also offer the safety control unit **SF-C10 series** (see next page), which is ideal for controlling Panasonic's safety light curtain, because its connectors make wiring easier

SF-C10

Less setup time for safety light curtains

Features

■ Supports both PNP and NPN polarities

A single unit can be used for PNP / NPN input switching, reducing the number of parts that need to be registered.

■ Removable terminal blocks reduce maintenance time

Removable terminal blocks are used. This reduces the work required for reconnecting wiring during maintenance

Removable!
Uses a spring method

■ Metal enclosure with an IP65 (IEC) protective structure

The strong metal enclosure has a built-in safety relay. It has an IP65 protective structure so that it can be set up individually without needing to be inserted into a control panel.

Connector in metal housing

■ Slim design

22.5mm thickness for insertion even into narrow spaces inside panels.

■ Three safety circuit systems packaged into a single unit!

The unit has three different built-in safety circuits: Output circuit of the safety light curtain, muting safety circuit, and emergency stop safety circuit.

SF-C10

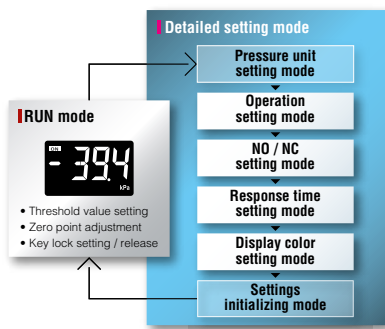

DP-0

Compact and easy-to-use
pressure sensor

Features

■ RUN and detailed setting mode

Pressure sensors of the DP-0 series operate in two different modes. RUN mode is used for quick access to settings like threshold values, zero point, and key lock functions. The detailed setting mode offers additional settings such as selecting the pressure unit or the response time. The two modes together help to achieve an optimum sensor performance.

■ Functional design

The unit body is completely black to make the LCD display easier to see. The keys offer a firm and crisp clicking feel, thus making operating the sensor smooth and reliable.

■ Compact & lightweight design

The unit body measures only 24.9mm in depth, which allows installation in a narrow space. The body weighs only 25g. The low weight is very advantageous if the sensor has to be mounted on moving parts, e.g. robot arms.

■ Low and high pressure type available

The low pressure type can be used with positive or negative pressure. It is ideal for suction applications where it indicates malfunctions due to pressure changes. The high pressure type is suitable for positive pressure of up to 1MPa. It is ideal for applications where a reference pressure needs to be checked.

Typical applications

Monitoring suction pressure on electronic components

Checking reference pressure

Technical specifications

Type		Low pressure type	High pressure type
Model no.	PNP	DP-001-P	DP-002-P
	NPN	DP-001	DP-002
Type of pressure		Gauge pressure	
Rated pressure range (note 2)		-1 to +1bar (-100 to +100kPa)	0 to +10bar (0 to 1MPa)
Pressure withstandability		5bar (500kPa)	15bar (1.5MPa)
Applicable fluid		Non-corrosive gas	
Supply voltage		12 to 24V DC \pm 10%	
Output		3x NPN or PNP transistor, max. 50mA	
Response time		2.5, 25, 250ms (switchable)	
Pressure port		M5 female thread	
Degree of protection		IP40	
Ambient temperature		-10 to +50°C	
Material		Resin body type	
Connection method		Connector (note 1)	
Dimensions (HxWxD)		30x30x25mm	
Accessories		CN-14A-C2 connector-attached cable 2m, 1 pc	

Notes:

- 1.) The 2m cable **CN-14A-C2** is included
- 2.) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +20°C. Reference pressure 1atm

Pressure sensors with dual display

Features

- **The current and threshold values can be checked at the same time!**

- **Dual display allows direct setting of threshold value**

Equipped with a 30mm square compact dual display. Because the current and threshold value can be checked at the same time, the threshold value can be set and checked smoothly without having to switch screen modes.

- **3-color display (red, green, orange)**

The main display color changes depending on the output status (ON/OFF operation) and while settings are being made. The sensor status can therefore be understood easily, and operating errors can be reduced.

- **Easy-to-read digital display!**

A clear 12-segment make numbers and letters easy to read.

- **High performance**

The low pressure type displays measurements in 0.1kPa at a resolution of 1/2000 and has a response time of 2.5ms (variable up to 5000ms). Moreover it boasts $\pm 0.5\%$ F.S. temperature characteristics and $\pm 0.1\%$ F.S. repeatability.

For low pressure

- **Copy function saves time and reduces human error**

Sensors can be connected to a master sensor one by one and settings copied to them. When making the same settings for multiple sensors, this prevents setting errors from occurring and reduces the number of changes required to instruction manuals when equipment designs are changed.

- **Equipped with auto-reference and remote zero-adjustment functions A precise pressure management is possible**

If the reference pressure of the device changes, the auto-reference function partially shifts the comparative output judgment level by the amount that the reference pressure shifts and resets the display value to zero. These functions are ideal for places where the reference pressure fluctuates wildly, or where fine settings are desired.

Typical applications

Confirming suction of electronic component

Confirming reference pressure

Leak test for PET bottles

Single-axis type digital pressure sensor with optional dual 3-color display

Features

■ Automatic sensor head recognition

The controller automatically recognizes sensor heads when they are connected, even if their rated pressure ranges are different.

■ Dual display and direct setting

The dual display allows you to check current and threshold values simultaneously.

To facilitate setting operations, three modes have been devised:

- › "RUN mode" is for operation settings that are carried out daily
- › "MENU SETTING mode" for basic settings
- › "PRO mode" for special and detailed settings

Controllers can be connected to a master controller one by one, and the master can transmit settings to the slave controllers. This significantly reduces time required when you need to make multiple, identical settings, or during production changeovers. Moreover, it reduces the possibility for error in such cases.

■ Direct installation using a hexagonal wrench

The sensor head is tightened with a hexagonal wrench, making installation easy, especially in tight spaces.

Typical applications

Leak test

Reference pressure checking

Monitoring vacuum pressure

Powerful and simple high-precision
detection of fluid and air pressure

Features

■ Head-separated sensor

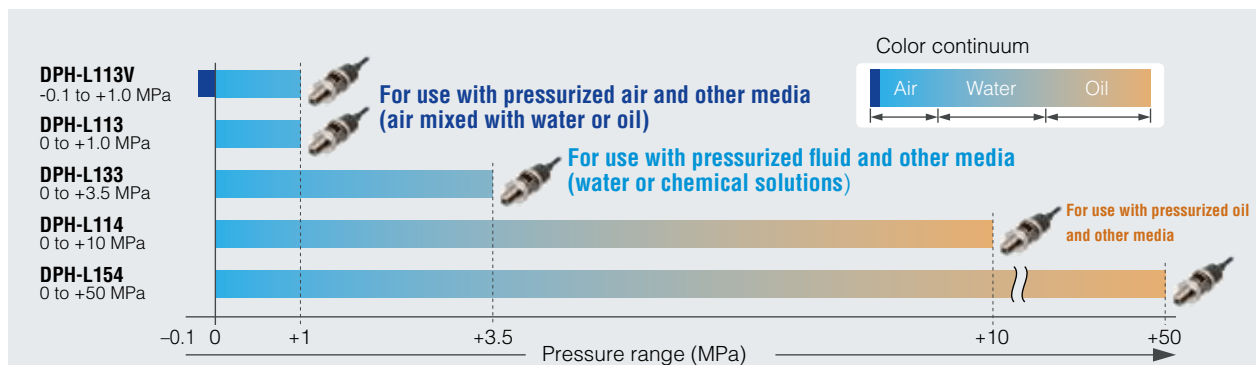

The sensor head is very flexible and can be used with or without the control unit. High-precision measuring is possible with an analog current output of 1 to 5V and extremely accurate detection of 1% F.S.

■ Stainless steel construction

The enclosure is made of stainless steel and hence suitable in a wide range of applications. An oil-less, hermetically enclosed diaphragm prevents the fluids from being polluted. An integrated throttle controls the pressure and prevents damage by excess pressure.

■ Wide pressure ranges

Various sensor heads for different pressure ranges from vacuum pressure to positive pressure (up to 500bar/50MPa) are available. With the control unit, the pressure range can be output linearly as voltage or current.

Typical applications

Transport of glass sheets after washing (pressurized air containing water droplets)

Management of plastic filling machine pressure (pressurized fluid)

Management of press pressure (pressurized oil)

Technical specifications

FM-200

FM-200

Flow sensor with dual display

Features

■ Easy-to-read, 2-color display with sub display

The 2-color digital display lets you check the operation status of the **FM-200** at a glance. The use of color makes it easy to distinguish between measurement values and functionality.

■ High precision of $\pm 3\%$ F.S.

Micro Electro Mechanical System (MEMS) technology allows the sensor to be mounted on a silicon sensor chip. The advantages are as follows: an extremely small heat capacity, a high precision of $\pm 3\%$ F.S., and a high-speed response time. Two temperature sensors, one on either side of the heater, detect heat distribution and make bidirectional detection possible.

■ One sensor for both intake and exhaust

A single sensor can detect flows bidirectionally, or the forward or reverse direction only, making it suitable for a variety of applications.

■ Analog voltage output

1 to 5V analog voltage output is incorporated.

■ Integrated output and pulse output mode incorporated

The FM-200 series can control and manage flows for a wide variety of applications. The integrated output mode will turn the output ON or OFF at the specified integrated value, allowing you to control air blowing volumes, for example. In pulse output mode, a pulse is generated once at each specified integrated value, allowing you to monitor the amount of air consumed, for example with an ECO-POWER METER.

■ Integrated value reset function

In integrated mode, values accumulate over time. As soon as the limit is reached, the digital output is set. This limit value can also be reset by an external input.

■ Rattle prevention function

To prevent rattling from rapid changes in flow or from noise, the response time can be set to one of seven steps, from 50ms to approximately 1500ms. The display update period can be changed to 250ms, 500ms or 1000ms in order to eliminate flickering.

■ ECO mode

In ECO mode, the backlight is turned off after approximately one minute if no operation occurs to reduce power consumption.

Typical applications

Checking suction

Checking seating

Monitoring air blowing and purge gas

GX-300

GX-300

Cylindrical inductive sensor with IO-Link

Features

High Response frequency

The **GX-303S** boasts a response frequency of 5 kHz and realizes high speed response. The response frequency of other sensor models has been also improved by up to 4 times as compared to our conventional models. Since the GX-300 series responds quickly to sensor ON/OFF judgement, it works well with a high-speed application and contributes to the reduction of equipment cycle time.

Indicator visible 360 degrees

In the small-diameter type sensors, the indicator light is visible at 4 locations. In the M8 and larger threaded type sensors, the high-brightness indicator and the resin containing dispersing agent allow the confirmation of the indicator from any angle to facilitate the cumbersome adjustment of installation position. The green indicator flashes during IO-Link communication.

Small-diameter type

M8 / M12 / M18 / M30 threaded type

Type	Response frequency of our conventional model	Significant improvement over conventional models!	Response frequency of GX-300 standard sensing range type
ø3 mm	—		5 kHz (GX-303S)
ø4 mm* Conventional model: ø3.8 / ø4.4 mm	1 kHz	4 times	4 kHz (GX-304S)
ø5.4 mm	1.5 kHz	2.7 times	4 kHz (GX-305S)
M5 threaded	1 kHz	4 times	4 kHz (GX-305M)
M8 threaded	1 kHz	2 times	2 kHz (GX-308M)
M12 threaded	450 Hz	3.3 times	1,500 Hz (GX-312M)
M18 threaded	300 Hz	2 times	600 Hz (GX-318M)

Extensive line up

The **GX-300** series includes 310 different sensor models. We offer various types of sensor models such as the cable type (cable length: 2m or 5m) connector type and pigtailed type. Furthermore, we can supply bending-resistant cable type models (cable length : 2m or 5m), which are suitable for installation on moving parts.

Cable type

Connector type

Pigtailed type

IOT ready

With the implemented IO-Link technology network integration is easy. The IO-Link models can be used as normal digital PNP output sensors or providing information about the sensor level

or the current sensor condition via IO-Link interface. This is perfect for predictive maintenance and applications with higher expectations.

GX-300

GX-M

Cylindrical inductive sensors

Features

■ 2- and 3-wire types

The **GX-M** series consists of 2- and 3-wire types. The 3-wire type is available as a shielded or non-shielded type. The 2-wire type is available as a shielded type and long-range type (up to 15mm). Reduced wiring efforts and space-saving installation reduce costs.

■ Various cylinder and thread types

M8, M12, M18 and M30 types means the GX-M series can be used to solve a wide range of automation task. Space-saving, case-by-case integration in production lines, testing and manual work stations.

■ Several connection possibilities

You can connect the GX-M sensor with either a 2m cable or M12 plug-in connector.

■ Special applications

IP69K (DIN) and IP68 (IEC) types are also available, e.g. for use in machine systems, i.e. the food processing machinery.

Typical applications

Control drilling depth

Detect how far press lowers

Count parts

Control position of components

Stable sensing of work pieces

Features

■ Environmental resistance

This sensor has a long stable sensing range. It is easy to install.

- › IP68g protection: water and oil-resistant
- › Space-saving installation
- › A metal sleeve ensures a secure installation

The new, integrated construction method improves environmental resistance performance.

■ The LED indicators are easy to see

A prism with a wide field of view has been developed, thereby greatly improving the visibility of the operation indicators.

■ Stable detection

- › Large sensing range
- › Max. deviation at max. sensing range: $\pm 8\%$
- › Max. deviation with temperature changes: $\pm 8\%$

Typical applications

Checking up/down operation of compact molding equipment

Shock resistance: 5000G

Sensing presence of metallic objects on a part feeder

Vibration resistance: 500Hz

Positioning metal pallets

Muting control with light curtains

HG-S

HG-S

Slim and robust contact
measurement sensor

Features

■ Larger measurement range

The new sensor head **HG-S1032** has a measurement range of 32mm with an indication accuracy of 3µm. All types are equipped with two plain bearings, one at the top and one at the bottom. The sensor can withstand more than 100 million sliding operations under application of lateral load (reference value). The two plain bearings increase the resistance to mechanical stress from the side and ensure the accuracy of measuring results even under lateral load.

■ Spindle stopper against damage

Even when a sudden upward thrust impact occurs, the resulting load is applied only to the lower section of the sensor unit because a spindle stopper minimizes the impact on the glass scales. Additionally an alarm can be set to notify the user of an upward thrust (stroke) that exceeds the set level. This allows you to conduct a preventive maintenance before the sensor head generates a malfunction.

■ Easy-to-understand 2-line digital display

The 2-line digital display simultaneously shows head measurement (measured value) and judgment value (calculated value). The high-contrast LCD provides sharp and clear indications and offers a wide viewing angle. Secondary display line: Displays sensor head measurement and other data. Main display line: displays judgment value.

- 1.) Dual display for more flexibility
- 2.) Copy function from master to slave units

■ Serial connection of up to 15 slave units

One master unit can be connected in series with up to 15 slave units in any order. This allows easy multi-point calculations. End plates (optional) must be mounted on both sides of the controller after the connection of slave units.

Typical applications

Coupling assembly inspection

Transmission parts height measurement

Flat screen flatness measurement

HG-C

Reliable detection with repeatability of 10 μ m

Features

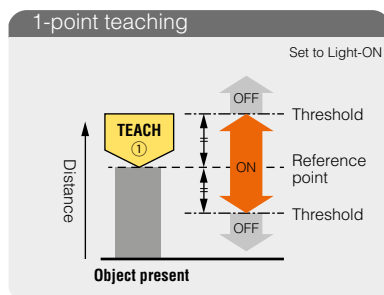

Equipped with 0-5V analog output

The sensor not only indicates measured values in mm, but also outputs analog voltage. The data can be used for various calculations and storage (logging) when the output is sent to a PLC + analog unit.

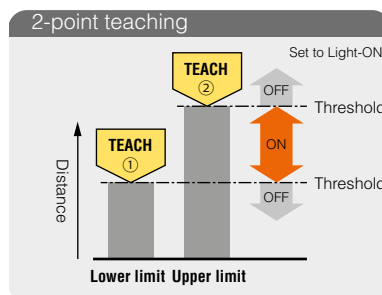

Configurable external input

The external input can be configured to perform one of four functions: "zero set", "teaching", "emission stop" and "selecting trigger function".

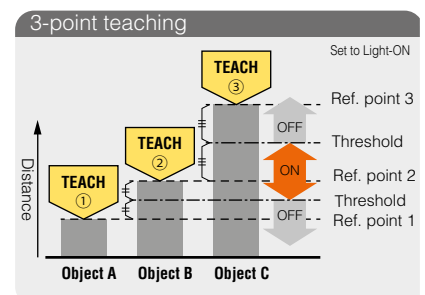

Teaching & window comparator mode

Perform 1-point teaching and the threshold range is set for the distance from the reference surface of the object to be detected.

Press TEACH once for the lower (first point) and once for the upper limit (second point). This is useful for detecting objects at different distances.

This is the method to set the threshold range by conducting the teaching at 3 points (detecting object A, B and C). After teaching, the reference points are automatically sorted in ascending order (reference point 1, 2 and 3). The thresholds are set at the midpoints between reference point 1 and 2, and 2 and 3, respectively. This is useful for detecting objects at different distances.

Typical applications

Measuring the hoop slack

Checking for presence of O ring

Controlling the height of a robot

Controlling the dispenser head height

Precision laser displacement
sensors

Features

All-In-One Concept

All processing electronics are incorporated in a robust sensor housing. All settings can be made directly on the sensor. A 7-segment LED-display makes it easy to configure sensor operation while checking displacement values.

Compact and lightweight body

With its lightweight plastic body, weighing just 70g and dimensions of 20.4 x 60 x 57mm, it is easy to integrate the sensor in machines and production lines where space is tight.

Extended product range

With the extension of the HL-G1 series it is now possible to measure on specular surfaces with a high accuracy. Models with different measurement distances up to 82mm are available. Suitable applications can be for example in the semiconductor industry with specular wafer surfaces or other polished metal parts.

User-friendly

The **HL-G1** series can be operated directly, by touch terminal (GT02/GT12 series) or Windows software via RS-422/RS-485.

Typical applications

Control of dispenser height

Detection of aluminum wheel grooves

Measuring sheet slack and thickness

Measuring the eccentricity of a metal shaft

HL-C2

HL-C2

Ultra high-speed, precision laser displacement sensors

Features

- **Excellent basic performance**
- **Sampling rate 100kHz**

The HDLC-CMOS sensors were developed especially for the **HL-C2** series. The high-resolution chip together with a very short processing time enables maximum resolution and speed.

- **Resolution up to 0.01 μ m, linearity up to $\pm 0.02\%$ F.S.**

Superior resolution of 0.01 μ m. Linearity of $\pm 0.02\%$ F.S. enabled by latest high resolution lens technology.

- **Compact but with a wide array of functions**

You can connect two sensor heads and a variety of devices to the ultra compact controller. Measurement values can be analyzed and displayed while the sensors are being controlled.

Typical applications

Measurement of the position of patterned glass

Control of the camera focus

Measurement of the shape of a camshaft

Measurement of the heights of chip parts

HG-T

HG-T

Laser thru-beam sensor

Features

High precision

The laser thru-beam sensor of the HG-T series works with a belt-shaped laser beam with a width of 10mm for measuring an area, e.g. for checking the contours of an edge.

The sensor achieves a repeatability of $> 1\mu\text{m}$ and has a linearity of less than $\pm 12\mu\text{m}$ over the whole measurement range.

The thru-beam sensor has a sensing range of 500mm, which means that a larger variety of applications can be realized than with sensors with a shorter sensing range.

Flexible mounting

The HG-T series comes with two different sensor heads, which differ in their dimensions. The slim type receiver is 10mm less wide than the standard type and fits well into machines with very limited space.

Sensor heads

Standard type:

Emitter: 8x30x60mm (WxDxH)

Receiver: 8x30x60mm (WxDxH)

Slim type:

Emitter: 8x30x60mm (WxDxH)

Receiver: 8x20x60mm (WxDxH)

Optical features

Thanks to functions like filters, edge detection, light intensity checks and averaging of measurement values (up to 1024), the measurements are very reliable. These functions help you to detect at an early stage when the measuring process does not run smoothly anymore and the system needs to be modified.

Easy installation of multiple sensors

The master-slave system makes it easy to connect up to 15 sensors in series. Another feature increasing ease-of-use is the possibility to copy settings from the master to the slave units. A LED indicates when copying is in progress.

Typical applications

Highly precise measuring and checking of web edges

Measuring the flatness of glass sheets for transport

Measuring of diameters

GP-X

GP-X

Eddy current analog sensor for
high-speed sampling

Features

- Ultra high-speed response time of 25 μ s
- Extremely low temperature deviations (0,07% F.S. $^{\circ}$ C)
- Predefined material characteristics

The sensor exhibits $\pm 0.3\%$ F.S. linearity deviation when used on iron and stainless steel. Furthermore, characteristics for other materials are already programmed in the controller, making selection easy. Of course, the settings can also be customized.

■ Serial interface

The controller can be connected with a personal computer via an RS-232 interface. GP-XAiME, the software included, simplifies data visualization and analysis. Moreover, several systems can be combined and then easily configured at the same time.

- The 5-digit, dual, 2-color digital display offers great visibility

If the measurement results fall within the setting range (GO), they will appear on the lower digital display in green. If they are out of setting range (HI, LO), they will be displayed in the upper digital display in orange. The display position and color change permit accurate visibility even for momentary changes.

Typical applications

Stroke end sensing

Eccentricity sensing

Height sensing

ER-Q

ER-Q

Miniature ionizer with fan

Features

■ Small dimensions

Simple and space-saving installation on production lines and manual workstations.

■ Adjustable

A continuously variable adjuster ensures the production of the required air volume.

■ Unit for demanding industrial environments

The LED displays the required maintenance steps or failures; this also can be queried via the outputs of a PLC. Parts for maintenance are easy to get at and replace.

Technical specifications

Type	Standard type
Model no.	ER-Q
Charge removal time ($\pm 1000 \rightarrow \pm 100V$)	Approx. 1.5s
Discharge output voltage	$\pm 2kV$
Ion balance	Max. $\pm 10V$
Discharge method	High frequency AC method
Power supply	24V DC $\pm 10\%$
Power consumption	Max. 200mA
Fan rotation speed	Continuously variable adjustable (potentiometer)
Outputs	ERROR and CHECK NPN open-collector transistor, max. 50mA
Status indicator / Monitoring function	Ready/Discharging (DSC/green), Discharge error (red), Fan error (blinking red)
Ambient temperature	0 to $+50^{\circ}C$
Ambient humidity	35 to 65%RH
Material	Enclosure: PBT, Discharge electrode needles: tungsten
Dimensions (HxWxD)	60x33x65mm
Accessories	I/O connector set manufactured by MOLEX, Inc.: Housing 5557-08P, terminal 5556T

ER-F

Features

Two types

Low volume fan type. This type generates only the half of the air volume as the standard type, which is required for small components and thin film. Four different speeds can be selected for the fan.

Easy maintenance

Because the discharge electrode needle unit is attached to the louver, exchange or maintenance of the electrode needles is made easy without touching the main unit. A safe design: once the louver is removed, the high-voltage circuit is broken and the fan halts. Simply replace the louver to change configuration between long distance and wide area ionization. The two louvers come with the ionizer main body.

Standard fan type
ER-F12

Low-volume fan type
ER-F12S

Straight louver removes charges at
great distances

Neutralizes static charges quickly from a great distance

Angled louver removes charges
over wide area

Neutralizes static charges; wide area ionizer

ER-F

ER-X

Area ionizer for fast applications

Features

■ Quick charge removal

Thanks to the pulse AC method, the **ER-X** series is well suited for high-speed applications as found in the packaging and semiconductor industries, where charge removal time is directly linked to productivity. In addition, discharge frequencies can be adjusted from between 1 and 100Hz, maximizing flexibility. Thanks to a built-in feedback system, the ionizer can even adjust the discharge frequency automatically during operation.

■ Feedback system

Individual displays for discharge, error messages and electrode needle control are provided on the controller. Furthermore, you can activate settings for frequency, ion balance or limits directly via a potentiometer and DIP switches.

■ Airless operation

The area ionizer of the ER-X series ionizers can be operated with or without air pressure. This technology opens up applications in fields such as the coating industry, as well as the production and packaging of microelectronic components that otherwise are blown around by whirling air.

■ Flexible system configuration

The system consists of a sensor head and a controller. The sensor head is available in different sizes. You can connect parallel up to 2 heads to the controller. This enlarges the working area of the system up to 1.2m.

Typical applications

Neutralization of foils

Charge removal from ICs

Charge removal from miniaturized electronic components

ER-VW

Nozzle angle adjustment

Features

■ Nozzle angle adjustment

The angles of the two nozzles can be adjusted within a range of approximately 190° by screwing down the ends of the nozzles.

■ Compact and ultrathin design

The thickness of the unit is 18.9mm. Since the nozzle angles can be adjusted, they can be installed in tight spaces, such as when other equipment is present.

Includes angle adjustment scale

■ Minimum air consumption 15ℓ/min.

The ER-VW series can utilize air flow levels starting from a minimum of 15 l/min. Because the amount of air consumed is so low, the loads placed on air supply equipment can be reduced.

■ Air supply monitoring function

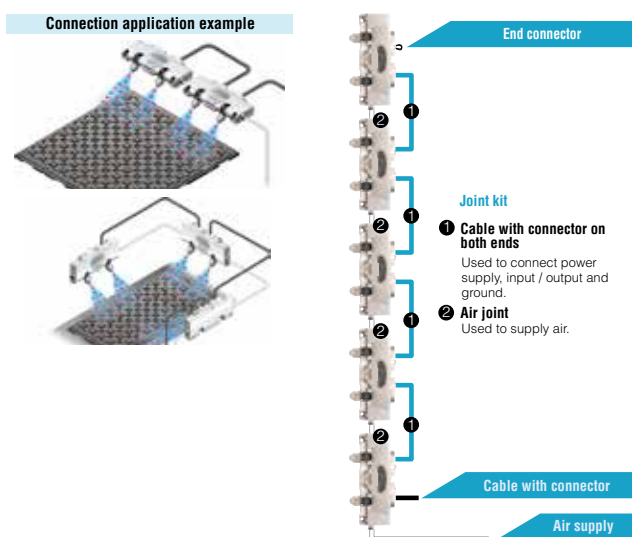

This function causes discharging to stop automatically if the supply of air drops below a certain pressure. Notification of this is given when the AIR indicator lights up and the discharge output (DSC) turns off. This prevents objects which are not charged from being overlooked when the air supply has been stopped.

■ Easy connection possible

The joint kit (optional) can be used to connect up to a maximum of 5 ER-VW units. The air supply part is connected via quick connection joints, and the power supply and input/output signals can also be connected easily using connection cables with connectors at both ends.

Multiple ER-VW units can be connected to provide charge removal layouts that suit the target equipment.

ER-VW

■ Functions to support accurate charge removal

In addition to the air supply monitoring function, the ER-VW is equipped with the following functions to ensure accurate charge removal.

Typical applications

Charge removal of ICs

Removing charge during pickup from dicing type

Parallel discharging on two assembly lines

Removing charges from LCD transport brackets

Technical specifications

Type	Spot
Model no.	ER-VW
Charge removal time ($\pm 1000 \rightarrow \pm 100V$)	Max. 1s
Discharge output voltage	$\pm 2kV$
Ion balance	Max. $\pm 10V$

ER-V

Ultra compact high-performance ionizer

Features

■ Produces excellent ion balance

The adoption of high-frequency AC method allows extremely stable ion balance to be achieved. Because the ion balance is not affected by the pressure of air supplied or by the setup distance, no troublesome adjustments are required after setup.

■ High performance but no controller needed

A full range of functions have been provided with full consideration given to ease of use in the workplace. No separate controller is needed.

■ Nozzle variations can be selected to suit the application

■ Ultra compact design accurately removes charges of objects even from narrow spaces

The main unit is merely 28x27x111.6mm so it can easily be combined with other devices and also be installed as an add-on. Furthermore, the high-voltage power supply is built-in so no extra space is required except for the ionizer itself.

It can be installed in places where the conventional bar type cannot so it can be placed closer to the object for more accurate charge removal.

Typical applications

Change removal and dust removal of lenses

Prevent discharge damage in circuit board LEDs

Charge removal glass surfaces

EC-G

Pulse air-gun ionizer

Features

■ Direct ionized air emission from air gun

With the new pulse air-gun ionizer operators can comfortably neutralize static electricity while manually cleaning.

■ Pulsed ionized air

Instant pulse air emission with high air pressure removes dust all at once. Its lightweight construction, ergonomic design and 2m cable make the air gun the perfect ionizer for manual jobs.

■ White LED illumination

A convenient white LED on the front of the gun illuminates target objects.

Technical specifications

Type	Air gun type
Model no.	EC-G02
Charge removal time ($\pm 1000 \rightarrow \pm 100V$)	Average 0.5s
Discharge output voltage	$\pm 1kV$
Ion balance	Max. $\pm 10V$

EF-S1

EF-S1

Constant monitoring of static charges on production lines

Features

■ Maintains and regulates product quality by preventing damage from static electric

Static electricity that can build up in various places along a process line can be monitored constantly so that abnormalities can be prevented before they occur, ensuring quality.

■ Reduces time for ionizer inspections

The de-ionizing effectiveness of ionizers can be understood in real-time so that things such as ionizer damage and the replacement period for worn components can be checked objectively, reducing the time required for inspection and testing.

Technical specifications

■ Sensor head

Type	Spot type
Model no.	EF-S1HS
Measuring range	8.0 to 20.5mm (± 1 kV) 21.0 to 100mm (± 2 kV)

■ Controller

Type	Spot type
Model no.	EF-S1C
Power supply	24VDC $\pm 10\%$
Display range (Measurement range)	-1000 to 1000 (± 1 kV) -1999 to 1999 (± 2 kV)
Judgment output	NPN open-collector transistor, max. 100mA
Analog voltage output	Output voltage 1 to 5V Load impedance approx. 100 Ω

Typical applications

Measuring surface potential when removing BG sheets

Measuring static electric charge in lead frames

Measuring frictional electrification of LCD modules
