COMPLETE line

The comprehensive solution for the control cabinet

Easy planning, intuitive installation

COMPLETE line is a system comprising technologically leading and coordinated hardware and software products, consulting services, and system solutions that help you optimize your processes in control cabinet manufacturing. Engineering, purchasing, installation, and operation become significantly easier for you.

Your advantages at a glance:

- Intuitive handling, thanks to the uniform design, look, and function
- Time savings across the entire engineering process, thanks to consistent software support
- Reduced logistics costs with standardized accessories and reduced variety of parts
- Optimized processes in control cabinet manufacturing, thanks to custom services and innovative manufacturing solutions

Comprehensive product portfolio

With COMPLETE line, we offer a complete product portfolio of technologically leading products. These include:

- Controllers and I/O modules
- Power supplies and device circuit breakers
- Terminal blocks and distribution blocks
- Relay modules and motor starters
- Signal conditioners
- Safety technology
- Surge protection
- Heavy-duty connectors

Intuitive handling

Thanks to the simple, intuitive handling of the coordinated hardware components you will save time during installation, startup, and maintenance. Push-in connection technology enables you to wire applications quickly – without using tools. The broad, technologically leading product portfolio will always provide you with the right product for standard or special applications.

Time savings across the entire engineering process

The PROJECT complete planning and marking software supports the entire control cabinet manufacturing process. The program features an intuitive user interface and enables the individual planning, automatic checking, and direct ordering of terminal strips.

Reduced logistics costs

Reduced variety of parts, thanks to standardized marking, bridging, and testing accessories. The COMPLETE line system coordinates products, design, and accessories in a way that you benefit from maximum reusability and thus reduce your logistics costs.

Optimized processes in control cabinet manufacturing

From engineering through to manufacturing, COMPLETE line supports you in making your control cabinet production as efficient as possible. Thus creating a customized concept for optimizing your processes in control cabinet manufacturing. Our terminal strip production helps you to flexibly manage peak order times or to supply your control cabinet production with fully assembled DIN rails just-in-time.

Additional information:

Find out more about COMPLETE line and your comprehensive solutions for the control cabinet. Visit our website:

phoenixcontact.com/completeline

Planning and marking software, MARKING system app, and customer-specific printing service

The PROJECT complete software is the most innovative solution to date, allowing you to plan your terminal strip with ease. Direct data exchange with all conventional CAE software solutions, along with the creation of all project documentation, make this software unique.

The high-performance marking tool optimally supports all output devices and marking materials. Design your own print files quickly and easily with a large selection of different templates, symbols, and formats.

Which marking suits your requirements? Find out with the MARKING system app.

Quickly and easily find the right solution with either the structured search assistant or the integrated bar code scanner. More than 3000 marking solutions, 11 different printing systems, and three marking technologies. You are certain to find the right marking option for your application.

With the Marking Editor, you can also create the required markings directly in the application environment.

All marking materials in the portfolio can also be ordered as customer-specific printed versions. Within no time at all, you will receive high-quality marking solutions, printed according to your individual requirements.

Marking and labeling – MARKING system

Planning and marking software, MARKING system app, and customer-specific printing service

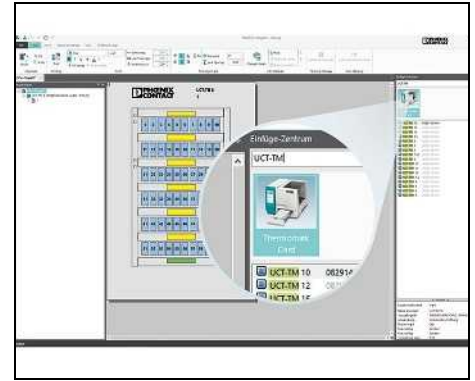

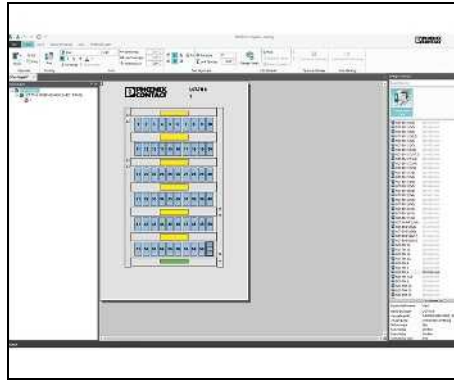

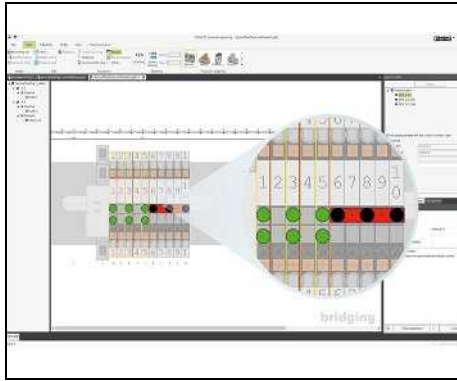

The PROJECT complete planning and marking software supports the entire control cabinet manufacturing process. The program features an intuitive user interface and enables the individual planning, automatic checking, and direct ordering of terminal strips, as well as the easy creation of corresponding markings.

The intuitive functions make PROJECT complete very easy to use. Customize the menu bars according to your individual needs.

Import projects directly from electrical plans. PROJECT complete includes interfaces to all conventional CAE programs.

PROJECT complete automates many steps and reduces the effort involved. Manually bridging or planning individual markings is no longer necessary.

Create the right markings for your projects with PROJECT complete. The software controls all marking systems from Phoenix Contact.

The intelligent search function in PROJECT complete selects the appropriate material using filters, reliably directing you to the perfect solution for your application.

In the template preview, you can see the breakdown of a material immediately and thus find the right product for your application faster.

MARKING system app

The MARKING system app spearheads the digital transformation in industrial identification. It creates real added value for the user. The app features a unique, mobile interface for the smart, networked selection and creation of marking solutions in Industrie 4.0. Conveniently find the right solution using either the structured search assistant or integrated bar code scanner. Among the 3000 marking solutions and eleven different printing systems (subdivided into three marking technologies), almost all users will find the right marking solution for their application. The app is clearly structured and intuitive to use, and also includes a search assistant for marking materials. In addition, the integrated MARKING Application Guide enables the specific selection of marking materials based on the application and environmental requirements. Through specific querying of the desired parameters and control via a user-friendly menu, the Application Guide quickly and intuitively directs you to the perfect marking solution for your application.

The app can also be used offline on mobile end devices. It is therefore available at all times, anywhere in the world. Thanks to the intuitive menu navigation, the app is easy to use and does not require specialist knowledge. The MARKING system app is available for iOS and Android operating systems. The app can be downloaded free of charge from the appropriate app store.

Marking Editor

Thanks to the Marking Editor, you can create the required markings directly in the application environment via tablet PC or smartphone.

Bar code scanner

With the bar code scanner, you can quickly and easily access the technical data for marking material. You can also perform marking directly via the Marking Editor.

Search assistant

With the search assistant, you can carry out a structured, targeted search for suitable marking materials, even without knowledge of this field.

Application Guide

The Application Guide queries the environmental conditions that the marking must be able to withstand. Based on this, it directs you to the appropriate material for your marking requirements

Easy ordering via PROJECT complete
Create customer-specific markings quickly and easily with PROJECT complete and then order them online.

Color printed marking solutions
You can use marking materials in UniCard and UniSheet format as well as metal labels for color printing.

We mark marking materials according to your requirements
All materials which can be marked according to customer requirements are indicated with this symbol. The ordering process is described on the next page.

Ordering special marking, step 1

All marking materials are available on our website. Order your custom marking. Search for the item you want on our website. Choose materials that end with ... CUS.

Ordering special marking, step 2

Configuration of the selected CUS item: under the **Configuration** category, you can enter the required marking data in the free text field.

Tasks required:

- Marking text
- Font size
- Read direction "horizontal" (1) or "vertical" (2)
- Normal or bold print
- Please send special characters, symbols, and logos as an image file.

Ordering special marking, step 3

- Zack marker strip (ZB...): 1 strip
- Card material (US...): 1 card
- Plastic sheet (e.g., UC(T)-...): 1 sheet
- Sheet material (e.g., BMKL...): 1 sheet
- Rolls (e.g., EML (...x..)R): 1 strip (row)
- Metal labels for the BLUEMARK ID COLOR (e.g., EMP-AL...): 1 label

Individually marked according to customer requirements

You will receive your marking materials, custom-marked according to the marking requirements you have provided, as quickly as possible.

Marking systems – MARKING system

The right printing system for every application

The TOPMARK NEO laser marking system marks materials for use in industrial applications permanently, making them highly resistant. Easy handling is possible, without special knowledge of laser technology. The BLUEMARK ID high-speed printers with innovative UV LED technology quickly and easily print materials in UniCard and US format as well as aluminum markers – in color as well.

The printers in the THERMOMARK series are renowned for their proven maintenance-free thermal transfer printing method and maximum user-friendliness.

The THERMOMARK PRIME is equipped with integrated marking software, an independent energy supply, and a user interface with intuitive operation. As a result, the card printer is ideally designed for mobile use.

The easy-to-operate THERMOMARK CARD 2.0 is installed in no time at all. It prints plastic labels in UniCard and UniSheet format, quickly and with high-quality results.

Marking labels and shrink sleeves in roll and continuous formats is straightforward and reliable with the THERMOMARK ROLL 2.0.

The THERMOMARK ROLLMASTER 300 and 600 robust industrial printers are both ideal for marking large print volumes.

With its 600 dpi print resolution, the THERMOMARK ROLLMASTER 600 is particularly suitable for printing high-resolution and small bar codes or 2D bar codes, small characters, symbols or graphics.

The THERMOMARK W2 enables double-sided marking of shrink sleeves, which significantly improve the legibility of the wire markings.

The robust THERMOFOX handheld printer is ideally suited to fast marking right on site. It processes continuous media for terminal marking, wire and cable marking, equipment marking, and plant marking

Product range overview

THERMOFOX	43
PLOTMARK	50
ENGRAVING UNIT	51

The BLUEMARK ID printing systems use the latest UV LED technology for marking, including CMYK multicolor printing. This makes the materials instantly wipe-resistant and ready for immediate use. The printing systems do not need time to warm up, they are environmentally friendly, and also very quiet.

The TOPMARK NEO marking system enables you to flexibly implement the requirements of challenging marking applications. With modern laser technology, you can create permanent, durable markings with ease. Preset parameters mean you don't need special knowledge of laser technology.

The THERMOMARK PRIME is ideal for mobile use with its integrated marking software, independent energy supply, and intuitive user interface. The automatic ink ribbon, magazine, and material detection also make operation much easier.

The THERMOMARK CARD 2.0 thermal transfer printer prints marking materials in card format. It offers you an easy way of producing terminal, wire, cable, and equipment markings of impressively high quality.

The THERMOMARK ROLL 2.0 thermal transfer printer processes material off the roll and continuous media. You can easily create high-quality printed labels, markers, and shrink sleeves.

The THERMOMARK ROLLMASTER is particularly suitable for marking large print volumes, either with 300 or 600 dpi for high print resolutions for bar codes or 2D printers.

The THERMOMARK W2 prints and perforates WMS continuous shrink sleeves on both sides. This double-sided printing ensures optimum legibility on conductors and cables. Easy loading of the sleeve is ensured, thanks to the special design of the guide elements.

The THERMOFOX handheld printer is ideally suited to fast marking right on site. The thermal transfer printer is robust, easy to use, and offers versatile functions. It processes continuous media for terminal, wire, cable, equipment, and plant marking.

The PLOTMARK also marks sheet material, in addition to strips and UniCard materials. The integrated pen station prevents the plotter pens from drying out. The PLOTMARK can be converted into an engraving unit quickly and easily by swapping the plotter head for the engraving device.

Marking systems

TOPMARK NEO, desktop laser marker including extraction unit

Direct laser marking

new

Integration into the PROJECT complete planning and marking software makes the TOPMARK NEO the fastest desktop laser marker in its class – and the easiest to use. You can now mark all materials, without special knowledge of laser technology.

- Wide range of materials comprising stainless steel, aluminum, ABS, polyacrylics, and polycarbonate
- Preset optimized laser parameters are available for all material types
- Thanks to automatic material detection of UCT cards and LS materials, marking is fast and effective
- The laser marker can also be used via the multicolor touch display without marking software
- Permanent markings are created by engraving, annealing or carbonizing the material

The BLUEMARK ID printing systems are the all-in-one solution for industrial identification. In addition to the BLUEMARK ID for monochrome printing, the BLUEMARK ID COLOR system also prints CMYK multicolor markings. Both printing systems are characterized by:

- Intuitive operation, the integrated marking software supports the entire printing process via an intuitive 7" graphical user interface
- Maximum speed, automatic material feed-in and a de-stacking function enable over 15,000 markers to be processed per hour. The use of several magazines speeds up large-batch processing
- Flexible material loading, additional front feed-in is integrated along with magazine insertion. This enables the flexible printing of individual UC/UCT sheets, metal labels, and US cards
- Material selection, over 1300 materials for industrial identification are available for both printing systems

THERMOMARK PRIME

Thermal transfer

- The THERMOMARK PRIME is the thermal transfer printer for mobile or stationary use
- With the integrated MARKING system app software, printing data is created on site
- Easy and intuitive operation via 7" touch color display
- Replaceable battery pack ensures cable-free use for many hours
- The connection to PROJECT complete enables the convenient processing of large marking projects
- Prints on plastic labels in UCT, US, and UM format

Notes:

Additional ink ribbons can be found in our online shop at phoenixcontact.net/products.

THERMOMARK CARD 2.0,
thermal transfer printer for sheet
and card material

Thermal transfer printer
for sheet and card material

- The THERMOMARK CARD 2.0 prints markers supplied in card format for cable, equipment, and plant marking applications
- For all UniCard (UCT) and UniSheet (US) materials
- Maintenance-free operation with tried-and-tested thermal transfer printing technology
- High-quality, fast marking. Printing time for one UniCard: just 8 seconds
- Easy and intuitive operation via touch color display
- USB and Ethernet connections
- Easy control via the PROJECT complete software

THERMOMARK ROLLMASTER,
thermal transfer printer for material
off the roll

Thermal transfer for rolls

Thermal transfer printer for material off the roll

The THERMOMARK ROLLMASTER 300 and THERMOMARK ROLLMASTER 600 complete the product range in the field of thermal transfer printers and excel, thanks to:

- High print speed
- Print resolution of 300 dpi
- The printers are ideal for marking large quantities and process all materials in roll format
- Easy and intuitive operation via touch color display
- The easy-to-use centering function for the printing material makes it possible to mark continuous media such as shrink sleeves
- High-quality resin-based ink ribbons ensure a form of marking that is resistant to mechanical and chemical effects
- Continuous media can be cut and perforated with a high degree of positioning accuracy

Notes:

For more ink ribbons, visit our online shop at: phoenixcontact.net/products.

Marking systems

THERMOMARK W2, thermal transfer printer for continuous shrink sleeve and continuous marking sleeve

Thermal transfer for rolls

Thermal transfer printer for continuous sleeve materials

The THERMOMARK W2 was specifically developed for double-sided printing and perforation of WMS(-2 HF) ... continuous shrink sleeves and continuous marking sleeves

- The double-sided printing ensures optimum legibility of the marking
- Shrink sleeve rolls can be inserted directly in the device, an external media hub is required for RL and RXL shrink sleeve rolls
- Guide elements ensure easy handling when inserting the sleeve
- The user-friendly interface of the PROJECT complete software enables you to enter custom specifications for the marking and marker length
- Ink ribbons in black and white are available for maximum contrast to the carrier material
- The printed markers can be easily and quickly separated along the perforations

THERMOFOX

Thermal transfer for rolls

Mobile thermal transfer printer for material off the roll

- Portable thermal transfer printer for material off the roll
- Maintenance-free operation with tried-and-tested thermal transfer printing technology
- Printing of self-adhesive labels, non-adhesive marking strips, and shrink sleeves
- The THERMOFOX prints materials in cassette format, which contain the material to be marked and the appropriate ink ribbon.
- Intuitive user guidance, thanks to a well-structured menu and direct input keys
- 8 different bar codes and over 300 symbols are integrated
- Alternative control via the PROJECT complete software

PLOTMARK

Plotter

Marking plotter

- During long periods of non-use, the plotter pens are stored safely in a pen station
- The pens are removed and deposited automatically
- The pen station of the PLOTMARK prevents the plotter pens from drying out
- An automatic marking preparation function ensures optimum marking results right from the first character
- The plotter is controlled via the PROJECT complete software
- The plotter can be connected to the computer quickly and easily via the Centronics or USB interface
- Easily operated with just a few buttons

ENGRAVING UNIT

Engraving

Engraving unit

- The ENGRAVING UNIT is the ideal marking solution for device and component marking applications subjected to high levels of mechanical and chemical stress
- The PLOTMARK can be converted into an engraving unit quickly and easily by swapping the plotter head for the engraving device
- To allow different line thicknesses, engraving chisels with diameters ranging from 0.2 ... 1.0 mm are available as accessories
- These are supplemented by a comprehensive product range of pre-assembled engraving materials; see page 346.
- These materials remain in position and do not slip when used with the CMS-P1-M/GPE ENGRAVING plotter magazine

Plotter pens

Plotter

Pens for marking plotter

- Plotter pens for high-quality product marking
- Wipe-resistant, high-quality print image
- Both reusable and disposable plotter pens are available

Description	Color
Disposable plotter pen , non-refillable plotter pen, with pen station, completely filled with 1 ml CMS-INK-TR-C 5 ink, for the highest requirements	
Line thickness 0.25 mm	black
Line thickness 0.35 mm	black
Pens , incl. adapters, ink reservoir, and pen station, for different line thicknesses, without ink	
Line thickness 0.25 mm	black
Line thickness 0.35 mm	black
Line thickness 0.50 mm	black

Cleaning set for pens, consisting of: 1 cleaning cup, 2 cartridges, each with 10 ml cleaning fluid and 2 spare sealing caps for the pen station

Cleaning cartridges with spare sealing caps, 2 cartridges, each with 10 ml cleaning fluid and 2 caps

Cleaning fluid, 30 ml

Ink cartridge, for CMS-PEN...

Terminal marking – MARKING system

Large-surface and clear marking of terminal strips is essential for quick and error-free wiring of terminal strips. This is also true for the maintenance and startup of control cabinets and systems.

Terminal markers from Phoenix Contact are optimally tailored to the terminals. They are available marked or unmarked, in sheet, card or roll format.

Product range overview

Terminal marking for terminal blocks from other manufacturers	156
--	------------

Markers are available in UniCard and UniSheet format for marking terminal blocks with a vertical marker groove. They can be supplied unprinted or printed in accordance with customer requirements.

Markers are available in UniCard and UniSheet format for terminal blocks, modules, and connectors with a flat marker groove. They can be supplied unprinted or printed in accordance with customer requirements.

Miniature terminal blocks/transformer terminal blocks have neither a flat nor tall marker groove. Special markers are available in UniCard format for marking these terminal blocks.

The universal marker groove can be marked with markers in UniSheet format. These are available unprinted or printed in accordance with customer requirements.

10-section zack marker strips are available in tall and flat versions. They are used to mark terminal blocks, modules or connectors and can be supplied unprinted or printed.

Unmarked zack marker strips can accommodate printed marker strips. Once printed, the self-adhesive strip is simply stuck onto the zack marker strip.

The marker strips can be used in both tall and flat marker grooves. They can be easily separated by hand since they are pre-perforated for the pitch.

Self-adhesive marker strips can be applied to all PCB terminal blocks and COMBICON connectors. They can be supplied printed on cards or unprinted on a roll.

Markers are available in both UniCard and UniSheet format for marking terminal blocks from other manufacturers.

Terminal marking

UniCard terminal marking for tall marker groove

- The UC-TM ... UniCard marking range includes markers for all products with tall and flat marker grooves
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- The multi-section marking strips can be easily separated and are easy to fit
- The markers support multi-line marking
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Notes:

An overview of the markable terminal blocks that are available from Phoenix Contact can be found starting on page 60.

Terminal marking

Zack marker strip terminal marking for tall marker groove

Can be marked using:

Plotter

Markers for a terminal block width of 3.5 mm

- The ZB zack marker strip system marks terminal blocks and electronics modules with a tall marker groove
- The multi-section marking strips can be easily separated and are easy to fit
- Different pitches are available on request
- Unprinted zack marker strips can be individually marked with the plotter or manually marked by hand
- Marking service: Phoenix Contact can custom-mark many zack marker strip markers according to your requirements

Selection of marking direction

- Please take care to select the correct marking direction for printed products
- ① “Printed horizontally” marking, text is the right way round for a horizontally arranged terminal strip
- ② “Printed vertically” marking, text is the right way round for a vertically arranged terminal strip

Notes:

1) Each unit pack contains 10 identically marked strips.

General data	
Can be marked with	Plotter
Material	PA
Flammability rating in accordance with UL 94	V2

Terminal marking

Zack marker strip terminal marking for flat marker groove

Can be marked using:

Plotter

Markers for a terminal block width of 3.5 mm

- The ZBF zack marker strip system marks terminal blocks and electronics modules with a flat marker groove
- The multi-section marking strips can be easily separated and are easy to fit
- Different pitches are available on request
- Unprinted zack marker strips can be individually marked with the plotter or manually marked by hand
- Marking service: Phoenix Contact can custom-mark many zack marker strip markers according to your requirements

Selection of marking direction

- Please take care to select the correct marking direction for printed products
- ① “Printed horizontally” marking, text is the right way round for a horizontally arranged terminal strip
- ② “Printed vertically” marking, text is the right way round for a vertically arranged terminal strip

Notes:

An overview of the markable terminal blocks that are available from Phoenix Contact can be found starting on page 60.

¹⁾ Each unit pack contains 10 identically marked strips.

Terminal marking

Marker strips for tall and flat marker grooves

- The TMT marking range includes markers for all products with tall and flat marker grooves
- The perforated marking strips are easy to separate and can be easily fitted using the tool supplied
- Quick and cost-effective marking with THERMOMARK ... roll printers from Phoenix Contact
- When combined with the right ink ribbon, the marking is highly resistant to chemical and mechanical influences. It is even suitable for use under harsh industrial conditions
- Marking service: Phoenix Contact can custom-mark TMT markers according to your requirements
- **Designation example:**
TMT 4 R
 Pitch: 4.2 mm
 Type of packaging: roll

Notes:
 An overview of the markable terminal blocks that are available from Phoenix Contact can be found starting on page 60.
 1) The TMT TOOL snap-in tool can only be used for terminal blocks from Phoenix Contact.

Can be marked using:

Thermal transfer for rolls

Terminal marking

UniCard group marking for snapping into CLIPFIX 35-5 end bracket

Can be marked using:

Direct laser marking

UV LED technology

Thermal transfer

Unmarked or marked according to customer specifications

- Group marking which saves space
- Large-surface marking option
- The markers, which are supplied in uniform sheets, can be marked quickly, easily, and precisely with marking systems
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- The markers support multi-line marking
- The sheets provide space for including function texts

Terminal marking

STP ... marker carriers, for multi-level terminal blocks

STP ...

- The marker carriers enlarge the marking areas of wired multi-level terminal blocks
- Depending on the version, the marker carriers are placed in the receptacles on the upper terminal block level

STP ...-ZB

- The marker carriers can, for example, snap into the center marking groove of ST spring-cage terminal blocks and double the marking area; see figure below

CARRIER-TM 300

- Can be snapped into all terminal blocks in the CLIPLINE complete system that have a lateral flat marker groove
- For accommodating ZB ..., UC-TM ... or UCT-TM ... terminal markers, which increases the marking area

CARRIER-TMD 300

- Double-row snap-in marker adapter for accommodating two ZB ... or UC-TM ... and UCT-TM ... terminal markers, which doubles the marking area

WS... warning labels

- Warning labels and warning covers serve to cover and identify mains terminal blocks
- This prevents accidental actuation of the terminal points
- The WS UT ... warning labels snap into the screw shafts of the relevant terminal block, they can be isolated lengthwise and crosswise
- The WS PT ... warning labels snap into the inspection holes of the Push-in terminal blocks

Terminal marking

UniCard marking for terminal blocks from other manufacturers with tall marker groove

Can be marked using:

UV LED technology

Plotter

Markers for terminal block widths up to 8 mm

- The UC1-TM ... UniCard marking range includes markers for Weidmüller, CONTA-CLIP, and Klemmsan terminal blocks
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The multi-section marking strips can be easily separated and are easy to fit
- The markers support multi-line marking
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Notes:

An overview of markable terminal blocks can be found on page 80 onwards.

Terminal marking

UniCard marking for terminal blocks from other manufacturers with tall marker groove

Can be marked using:

Thermal transfer for sheets and cards

UV LED technology

Direct laser marking

PRINTED
FOR YOU

Markers for terminal block widths up to 6 mm

- The UCT5-TM ... UniCard marking range includes markers for Cabur terminal blocks
- The markers, which are supplied in uniform sheets, can be marked quickly, easily, and precisely with marking systems
- The multi-section marking strips can be easily separated and are easy to fit
- The markers support multi-line marking
- The sheets provide space for including function texts
- The UCT sheet can also be used with the THERMOMARK CARD-UCT-MAG1 magazine in THERMOMARK CARD ...
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Notes:

An overview of markable terminal blocks can be found on page 80 onwards.

Thermal transfer

For a tall marker groove up to a pitch of 8 mm

- The UM ...-TM ... universal material marking range includes markers for terminal blocks from a variety of manufacturers. UM6R ... for Entelec, UM7 ... for Legrand, and UM8 ... for Woertz
- The markers, which are supplied in the form of double strips, can be marked quickly, easily, and precisely with marking systems
- The markers support multi-line marking
- The marking strips are easy to fit and can be easily separated if required
- The marking strips are snapped into the magazine in a twist-proof manner by means of a coding pin and fed to the output devices
- The format automatically ensures printing with a high degree of positioning accuracy

Wire and cable marking – MARKING system

Clear and permanent marking of all conductors and cables considerably improves transparency in control cabinets and switchgear. It makes assembly and maintenance work easier and assists in rectifying faults.

Phoenix Contact conductor and cable markers provide the ideal marking option for any application. Just select an assembly method. The markers can be threaded on, clipped on, adhered in place or secured with cable ties.

KMK... cable markers for assembly with cable ties	234
Cable markers for carrier assembly	
Markers made of plastic and stainless steel	245
PATG... and PATO... marking collars	248

Far from being a luxury, standard-compliant and permanent wire and cable markings are actually a mark of quality demanded by customers in respect of modern high-quality capital goods.

Phoenix Contact provides the ideal marking option for wire and cable marking, for all users and all applications. With this in mind, a comprehensive product range is available, consisting of various label and sign formats, made from different basic materials, such as plastics, aluminum, and stainless steel.

Depending on the design, the marking materials are threaded on, clipped on, adhered in place or secured with cable ties. The printing systems and marking materials that are coordinated with each other ensure high quality and resistance to external influences.

Depending on the application and material for individual marking, the following marking systems can be used.

- TOPMARK NEO, laser marker for marking UniCard formats as well as stainless steel and aluminum labels.
- BLUEMARK ID and BLUEMARK ID COLOR, high-speed printer with UV LED technology for marking UniSheet and UniCard formats as well as aluminum markers
- THERMOMARK CARD 2.0 and THERMOMARK PRIME, thermal transfer card printer for marking UniSheet and UniCard formats
- THERMOMARK ROLL 2.0, thermal transfer roll printer for marking material off the roll and continuous media
- THERMOMARK ROLLMASTER 300 and ROLLMASTER 600, industrial thermal transfer roll printer for large printing volumes of rolls and continuous media
- THERMOMARK W2, thermal transfer printer for double-sided marking and perforation of continuous shrink sleeves
- THERMOFOX, thermal transfer printer in handheld format, for marking labels and shrink sleeves in cassette format
- PLOTMARK, marking plotter for marking UniCard formats as well as materials in strip and sheet format
- Standard desktop laser printer, for marking material in sheet format

The PROJECT complete software is available for the easy and efficient production of markings. The marking data generated can be imported from CAE systems, Excel or word processing programs using the data exchange manager included in PROJECT complete. In addition to automatic data transfer, there is also the option of manual input. The print files are then automatically forwarded to the corresponding marking systems and processed.

If you do not have the option of creating markings yourself, you can turn to our marking service. We will be happy to handle your printing orders. This also includes engraving or laser marking of stainless steel cable markers.

Conductors and cables can be optimally and permanently marked with stainless steel or aluminum markers. They are attached using cable ties.

Clip-on conductor markers feature two non-detachable marking areas that remain legible at all times. They are clipped onto pre-wired conductors and cables manually.

Individual printed markers are threaded onto conductors or attached by means of cable ties. Various materials can be supplied as cards, sheets or on rolls.

The ferrules feature an insulating collar that supports marking and are marked prior to crimping. This combines two operations in one.

PATG HF, PATG, and PATO marking collars are slid onto the conductors and filled with insert strips that can be marked.

Shrink sleeves are ideal for captive marking of cables and conductors. They are available prefabricated and in rolls.

Conductor markers are fitted using cable ties almost regardless of conductor or cable diameter. The large marking area provides enough space for comprehensive marking.

Cable marker labels consist of a marking field and transparent film. The film protects the marking against abrasion and dirt. The labels are available in various shapes and sizes.

Plastic cable markers are suitable for both bundling and marking conductors and cables. A sealing cap protects the marking against contamination and abrasion.

Wire and cable marking

Stainless steel and aluminum cable marking for assembly with cable ties

- The LS-WMTB ... product range is available in stainless steel (V4A) or aluminum. The range provides markers for quick and easy fastening with cable ties
- LS-WMTB-V4A ... markers are characterized in particular by their high resistance to salt water, chloride, and solvents. This makes them suitable for the most demanding industrial requirements.

- By selecting the material in the PROJECT complete planning and configuration software, the correct laser parameters are automatically transferred to TOPMARK ...
- **Designation example:**
LS-WMTB-V4A (29x8)
Lettering field size: 29 x 8 mm

- The use of modern laser technology creates highly resistant and permanent markings
- The LS-WMTB-V4A ... product group can be marked in two ways: by engraving or annealing
- Marking service: Phoenix Contact can custom-mark many markers according to your requirements

Can be marked using:

Clip-on UniCard wire marking

Markers for conductor diameters from 1.9 to 3.1 mm

General data		Technical data		
Can be marked with		BLUEMARK ID COLOR • BLUEMARK ID • BLUEMARK CLED • PLOTMARK • CMS-P1-PLOTTER		
Material		PA		
Flammability rating in accordance with UL 94		V2		
Temperature range	[°C]	-40 ... 120		
Wipe resistance		DIN EN 61010-1 (VDE 0411-1)		
Components		Free from silicone and halogen		
Conductor diameter range	[mm]	1.9 ... 3.1		
Conductor cross section range	[mm²]	0.5 ... 1.5		
Conductor cross section range	AWG	20 ... 16

Clip-on UniCard wire marking

Can be marked using:

UV LED technology

Plotter

PRINTED
FOR YOU

Markers for conductor diameters
from 2.8 to 4.4 mm

- The UC-WMC ... UniCard marking range includes markers for the captive marking of control cables right through to light plastic-sheathed cables with large diameters
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- Can be clipped on even after wiring has been completed
- Two marking areas that can be easily read at anytime
- The markers support multi-line marking
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Wire marking with ferrules that can be marked

- Ferrules that can be marked with BLUEMARK printing systems
- Crimping and marking in one step
- Highly resistant and optimum printing quality, thanks to modern UV printing technology
- Ferrules made from electrolytic copper
- Electroplated
- Corresponding crimping pliers can be found on page 417.

Can be marked using:

UV LED technology

Wire and cable marking

UniCard wire marking for marking collars

- The UC-WMT ... UniCard marking range includes markers for wire marking with marking collars from the PATG/PATO ... system; see page 248.
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- Marked insert strips are simply inserted into the collars. This protects the marking against contamination
- The insert labels are aligned in such a way on the UniCard materials that they can be separated branch-wise. This makes mounting easier
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

FOR YOU

Markers for cable diameters > 7 mm

- The UCT-WMTB ... and UC-WMTBA ... UniCard marking ranges provide markers for fastening with standard cable ties
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- For large-surface marking of conductors and cables > 7 mm in diameter
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Notes:

For more cable markers for fastening with cable ties, visit: phoenixcontact.net/products

For corresponding cable ties, see from page 614.

Wire and cable marking

UniCard wire marking for marking collars

- The UCT-WMT ... UniCard marking range includes markers for wire marking with marking collars from the PATG/PATO ... system; see page 248.
- The markers, which are supplied in uniform sheets, can be marked quickly, easily, and precisely with marking systems
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- Marked insert strips are simply inserted into the collars. This protects the marking against contamination
- The insert labels are aligned in such a way on the UniCard materials that they can be separated branch-wise. This makes mounting easier
- The sheets provide space for including function texts
- The UCT sheets can also be used with the THERMOMARK CARD-UCT-MAG7 magazine in THERMOMARK CARD ...
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Self-adhesive wire marking with transparent protective film

Can be marked using:

UV LED technology

Thermal transfer

PRINTED FOR YOU

Markers for conductor diameters of up to 36 mm

- The US-WML ... cable marker labels consist of a marking field and a transparent protective film
- The protective film is wrapped over the marking. This means the film protects against contamination and abrasion
- The cable marker labels do not increase the cross section of the cable, allowing the cable to be subsequently drawn through cable ducts, for example
- The marking systems mark the markers, which are supplied in uniform sheets, quickly, easily, and cost-effectively
- Quick and easy handling
- Resistant to solvents
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- Marking service: Phoenix Contact can custom-mark many UniSheet markers according to your requirements

Self-adhesive wire marking with transparent protective film

- The cable marker labels consist of a marking field and a transparent protective film
- The protective film is wrapped over the marking. This means the film protects against contamination and abrasion
- The cable marker labels do not increase the cross section of the cable, allowing the cable to be subsequently drawn through cable ducts, for example
- Quick and easy handling
- Resistant to solvents

Radio-frequency identification, RFID

- The WML-RFID/HF conductor markers are also equipped with an integrated high-frequency transponder. They are used for contact-free identification, data exchange, and localization with the aid of an RFID handheld device

Notes:
Due to the wide variety of cable and conductor types, the transponder function must always be checked by the end customer.
WML-RFID/HF conductor markers cannot be marked by the THERMOMARK S1.1 and THERMOMARK X1.1.
If you wish to process large rolls with the THERMOMARK ROLL..., use the THERMOMARK ROLL-ERH external media hub. See printers, page 40.

Self-adhesive wire marking as a flag, vertical

The WML-FLAGV ... wire marking flags support large-surface marking of conductors with a diameter of up to 6 mm perpendicular to the conductor direction. They are characterized by the following:

- Can be printed on both sides
- The thermal transfer printer creates a high-quality print image
- Quick and easy handling
- Resistant to solvents

Notes:
Corresponding ink ribbons can be found in our online shop at phoenixcontact.net/products.

Wire and cable marking

Pre-assembled shrink sleeves, halogen-free

- WMS-2 HF ... shrink sleeves provide permanent and captive conductor and cable marking
- The material is available pre-assembled in a handy conductor format
- Up to four markings, separated from each other, are positioned on the carrier material on each row. Each is arranged separately
- Feed the conductor through the sleeve. If required, fix the conductor by shrinking the sleeve
- The shrink sleeves also provide electrical insulation. They also provide mechanical protection
- The shrink ratio is 2:1
- The shrink sleeves can be printed on one side
- The WMS-2 HF ... product range satisfies the stringent requirements of DIN EN 45545-2 (R22/R23/R24:HL3), making it ideal for use in the railway industry

Wire and cable marking

Pre-assembled shrink sleeves

Can be marked using:

Thermal transfer for rolls

PRINTED
FOR YOU

Conductor diameter from 0.8 to 38 mm,
white and yellow

- WMS ... shrink sleeves provide permanent and captive conductor and cable marking
 - The sleeves are pre-assembled for optimum use of material.
 - Up to four markers per sleeve are separated by perforation
 - Thread the conductors to be marked through the sleeve. Then fix the sleeve to the conductor by shrinking it
 - The sleeves remain flexible after shrinking
 - The shrink sleeves provide the conductors with additional electrical insulation and mechanical protection
- The following standards are satisfied:
- UL 224 (125°C, 600 V, all tubing-1)
 - CSA.C22.2 No. 198.1 (125°C, 600 V, all tubing-1)
 - MIL-STD-202G, SAE AMS-DTL-23053, ASTM E162, E662, E1354

THERMOMARK-RIBBON 110-WMSU	0801358	1

Ink ribbon for roll printer, ink color: black, length: 300 m, width: 110 mm

Continuous shrink sleeves

Can be marked using:

Thermal transfer for rolls

PRINTED
FOR YOU

Conductor diameter from 0.8 to 50.8 mm,
white

- Equip your printer with the CUTTER/P perforation unit, to automatically perforate shrink sleeves to the desired length
- Thanks to the CUTTER cutting unit, the shrink sleeves in continuous format can be individually cut
- The THERMOMARK W2 continuously prints shrink sleeves in rolls on both sides
- Individual markers are cut to any length
- The following standards are satisfied:
 - UL 224 (125°C, 600 V, all tubing-1)
 - CSA.C22.2 No. 198.1 (125°C, 600 V, all tubing-1)
 - MIL-STD-202G, SAE AMS-DTL-23053, ASTM E162, E662, E1354

Notes:
For marking WMS ... shrink sleeves, the ink ribbon 110-WMSU, 64-WMSU, 25-WMSU, 64-WMSE, 110-WMSU WH or 64-WMSU WH is required, see printers, page 40.
THERMOMARK ROLL...: Use the THERMOMARK ROLL-ERH external media hub for R and RL rolls, see printers, page 40.
THERMOMARK ROLLMASTER 300 and ROLLMASTER 600, THERMOMARK ROLL X1, THERMOMARK W2: R rolls can be directly inserted in the device. Use the THERMOMARK ROLL-ERH external media hub for RL rolls, see printers, page 40.

Marking sleeves

Can be marked using:

Thermal transfer for rolls

new

Conductor diameter from 1.2 to 4.8 mm,
white and yellow

The WMS-OT HF ... marking sleeves are used to mark conductors and cables

- The large opening in the material means that the cable can be fed quickly and easily through the sleeve
- The marking sleeves are not shrinkable
- The material is available in continuous format on a roll
- The material can be cut to custom length using the CUTTER unit
- The CUTTER/P perforation unit can be used to perforate the sleeve as required
- The marking sleeves can be printed on both sides
- The WMS-OT HF ... product range satisfies the stringent requirements of DIN EN 45545-2 (R22/R23/R24:HL3), making it ideal for use in the railway industry

Notes:

THERMOMARK ROLL..., THERMOMARK ROLL X1, THERMOMARKROLLMASTER 300, THERMOMARK ROLLMASTER 600, THERMOMARK X1.2, THERMOMARK W2
Use the THERMOMARK ROLL-ERH external media hub for R and RL rolls, see printers, page 40.

Insertable wire marking for marking collars

- EMT ... insert labels for marking various marking collars
- Thanks to their special contour, EMT ... insert labels remain securely inside the collar once inserted
- Quick and cost-effective marking with THERMOMARK ... roll printers from Phoenix Contact
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- Marking service: Phoenix Contact can custom-mark many conductor markers according to your requirements
- **Designation example:**
EMT (10x4)R
 Lettering field width: 10 mm
 Lettering field height: 4 mm
 Type of packaging: roll

Notes:
PATG/PATO ... system, see page 248.
KMK ..., see page 236.
LM ..., see page 237.
The WMT (15x4)RL can only be printed using the THERMOMARK ROLLMASTER 300/600. In addition, the tear-off edge must be unscrewed from the printer.

Wire marking for cable tie assembly

Can be marked using:

Thermal transfer for rolls

PRINTED
FOR YOU

Markers for conductor diameters of 6 mm and above

The halogen-free wire and cable marking is used for marking and bundling conductors and cables indoors and outdoors

- Made from high-quality thermoplastic polyether urethane
- Highly flexible material, adapts to the bending of the conductors or cables
- The carrier material is ideal for printing additional markings, e.g., project information. This makes it easier to assign the markers during mounting
- Very high tensile strength
- Flame-retardant material
- The marker is attached to the conductor with cable ties. There are two fastening lugs for this
- Marking service: Phoenix Contact can custom-mark many conductor markers according to your requirements
- **Designation example:**
WMTB HF (40x12)R
HF: halogen-free material
Lettering field width: 40 mm
Lettering field height: 12 mm
Type of packaging: roll

Notes:

Conductor marker carriers for assembly with cable ties, for labels with laminated protective film

- The WM-CARRIER /B ... conductor marker carriers consist of a marking field for labels and a transparent, self-adhesive laminated protective film
- The protective film provides permanent protection against contamination and abrasion
- The thermal transfer printer creates a high-quality print image
- Quick and easy handling
- The marker is attached to the conductor with cable ties. There are two fastening lugs for this
- Resistant to solvents
- Marking service: Phoenix Contact can custom-mark many cable marker labels according to your requirements

Notes:
For corresponding cable ties, see from page 614.

Wire and cable marking

Plastic cable markers for insert labels, for assembly with cable ties

- Plastic cable markers mark and bundle conductors and cables indoors
- The sealing cap protects the marked insert label from contamination
- Marking service: Phoenix Contact can custom-mark many insert labels for plastic cable markers according to your requirements
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- **Designation example:**
ESL(29x8)
Lettering field width: 29 mm
Lettering field height: 8 mm
Type of packaging: sheet

Notes:
For corresponding cable ties, see from page 614.
The print image may vary depending on the laser printer.

For insert labels with lettering field size 29 x 8 mm, for cable diameters > 10 mm

Wire and cable marking

Halogen-free marking collars for insert labels

- These wire marking systems consist of marker carriers and insert labels
- The PATG HF ... collar is a captive marker carrier
- Marks conductors with a diameter of 1.3 mm ... 10 mm
- The corresponding UC-WMT ... and UCT-WMT ... insert labels are used for marking
- These wire marking systems are particularly suitable for use in the railway and automotive industry, traffic technology, and building technology, thanks to their outstanding material properties
- Comprehensive approvals, such as NF F 16-101/16-102, DIN EN 45545-2, and DIN 5510-2 ensure international use
- Strengthening ribs ensure central fixing of the conductor or cable

Notes:
High-quality fluid printing with the BLUEMARK is required when using the UC-WMT... insert labels.

Equipment marking – MARKING system

Marking electrical and electronic control cabinet components does not just make maintenance work easier. In some industries it is actually a mandatory requirement. Moreover, equipment identification improves the quality of the control cabinets and systems.

Phoenix Contact offers a variety of different markers for equipment marking. From adhesive labels to high-quality engraving labels, the extensive marker range caters for every application.

A variety of printing systems is available for marking or engraving.

The right marking solution for every device

Phoenix Contact	256
-----------------	------------

Other manufacturers	262
---------------------	------------

LS-EM... stainless steel, aluminum, plastic, and laser foil equipment marking

Designed to be stuck on, screwed in or riveted or snapped into marker carriers	282
--	------------

Aluminum EM... AL and stainless steel EM...-V4A equipment marking

Designed to be stuck on, screwed in or riveted or snapped into marker carriers	294
--	------------

UniCard UC-EM... and UCT-EM... equipment marking

Designed to be stuck on, screwed in or riveted or snapped into marker carriers	298
--	------------

Designed to be snapped in, for devices from Phoenix Contact and other manufacturers	306
---	------------

UniSheet US-EM... equipment marking

Designed to be stuck on, screwed in or riveted or snapped into marker carriers, labels, and combi labels	314
--	------------

EM... equipment marking, labels supplied in rolls

Labels for buttons, continuous and textile labels, labels for rough surfaces, for high-temperature and ESD applications, removable labels, labels with anti-tamper protection	324
---	------------

Insert strips for devices from Phoenix Contact and other manufacturers	342
--	------------

BMK... equipment marking, labels supplied as DIN A sheets	344
--	------------

GPE... and EMLP... equipment marking, markers for printing or engraving	346
--	------------

Marker carriers and profiles	348
-------------------------------------	------------

Clear marking of electrical and electronic control cabinet components is essential for safe and efficient work. As with comprehensive technical documentation, marking all operating equipment increases the availability of the switchgear. This simplifies maintenance.

Last but not least, equipment identification improves the quality of the control cabinets and systems. Phoenix Contact offers a wide range of different marking materials; labels and signs made from plastic, aluminum, and stainless steel.

Depending on the design, the marking materials are adhered in place, snapped into existing carriers or secured by means of rivet or screw mounting. The combination of printing system and marking material ensures high quality with regard to the appearance, wipe and scratch resistance.

Depending on the application and material for individual marking, the following marking systems can be used.

- TOPMARK NEO, laser marker for marking UniCard formats as well as stainless steel and aluminum labels.
- BLUEMARK ID and BLUEMARK ID COLOR, high-speed printer with UV LED technology for marking UniSheet and UniCard formats as well as aluminum markers
- THERMOMARK CARD 2.0 and THERMOMARK PRIME, thermal transfer card printer for marking UniSheet and UniCard formats
- THERMOMARK ROLL 2.0, thermal transfer roll printer for marking material off the roll and continuous media
- THERMOMARK ROLLMASTER 300 and ROLLMASTER 600, industrial thermal transfer roll printer for large printing volumes of rolls and continuous media
- THERMOFOX, thermal transfer printer in handheld format, for marking labels in cassette format
- PLOTMARK, marking plotter for marking UniCard formats as well as materials in strip and sheet format
- ENGRAVING UNIT, engraving unit for the marking plotter, for marking 2-layer plastic materials in sheet format
- Standard desktop laser printer, for marking material in sheet format

The PROJECT complete software is available for the easy and efficient production of markings. The marking data generated can be imported from CAE systems, Excel or word processing programs using the data exchange manager included in PROJECT complete. In addition to automatic data transfer, there is also the option of manual input. The print files are then automatically forwarded to the corresponding marking systems and processed

If you do not have the option of creating markings yourself, you can turn to our marking service. We will be happy to handle your printing orders. This also includes engraving or laser marking of stainless steel cable markers.

Device markers are available in various sizes, materials, and colors. The self-adhesive labels have been designed for use in a wide temperature range.

Drilled labels are available for marking devices and control cabinets. These can be securely attached to the device using screws or rivets.

The CARRIER marking system is the perfect choice for marking buttons. The system consists of a carrier plus marking label and can be used in control cabinets as well as in the field.

High-temperature labels are ideal for marking PCBs. These labels can safely and permanently withstand temperatures of -40°C to 180°C ; or a temperature of 300°C for up to 60 seconds.

Tamper-proof labels are used as rating plates or seals. When detaching, a part of the metalized layer separates. The part leaves a pattern on the label and substrate.

GPE label sheets consist of a two-layer material that is ideal for engraving. However, the prefabricated self-adhesive labels can also be marked directly by hand or using a plotter.

In the case of small print volumes, labels are also printed using standard desktop laser printers. Copy sheets are provided with margins to make it easier to remove individual labels.

The self-adhesive markers are available in various shapes and sizes. They can be used to mark components, devices, and buttons and are highly resistant to chemical and mechanical effects.

Self-adhesive marker carriers are used in conjunction with marking labels to mark devices and modules. The carriers can be stuck onto all standard surfaces.

Equipment marking

Equipment marking, stainless steel and aluminum, for screwing or riveting

Can be marked using:

Direct laser marking

PRINTED
FOR YOU

Stainless steel, material thickness:
0.5 mm²⁾

- The LS-EMSP ... product range is available in stainless steel (V4A) or aluminum. LS-EMSP ... provides markers for quick and easy fixing with screws or rivets
- The LS-EMSP-V4A ... product range is characterized in particular by its high resistance to salt water, chloride, and solvents. This makes it suitable for the most demanding industrial requirements.
- The LS-EMSP-V4A ... product group can be permanently marked in two ways:
 - by engraving or annealing
 - By selecting the material in the PROJECT complete planning and configuration software, the correct laser parameters are automatically transferred to TOPMARK ...
- Marking service: Phoenix Contact can custom-mark many markers according to your requirements
- **Designation example:**
LS-EMSP-V4A (39x15)
 Lettering field width: 39 mm
 Lettering field height: 15 mm
 Type of packaging: sheet

Notes:
For matching rivets for securing the LS-EMSP-V4A ... and LS-EMSP-AL ..., see the product area on our website at phoenixcontact.net/products .
Drilling diagrams can be found at phoenixcontact.net/products
¹⁾ From lettering field size of 110 x 80 to 170 x 180 mm, the material thickness is 1.5 mm.
²⁾ For a lettering field size of 140 x 100 mm, the material thickness is 1.0 mm

Marking and labeling – MARKING system

Equipment marking

Equipment marking, plastic, stick-on, with hole for switch

Can be marked using:

Direct laser marking

PRINTED
FOR YOU

TRANSPLY-ABS, colored, material thickness: 0.8 mm

- The LS-EMLP 24/ 30/ 32 ... product range includes self-adhesive double-layer plastic device markers. The markers have a hole for switches
- A wide range of different marker sizes is available for custom designs
- By selecting the material in the PROJECT complete planning and configuration software, the correct laser parameters are automatically transferred to TOPMARK ...
- Marking service: Phoenix Contact can custom-mark many markers according to your requirements
- **Designation example:**
LS-EMLP 24 (30x12) WH
Lettering field size: 30 x 12 mm
Hole diameter for switch: 24 mm, white material with black marking

Equipment marking

Stick-on aluminum device marking

- The EMLP-AL... aluminum product range provides self-adhesive device markers with high adhesive strength
- The markers can be marked quickly, easily, and cost-effectively with the BLUEMARK printing systems
- Marking service: Phoenix Contact can custom-mark EMLP-AL ... markers according to your requirements

- A wide range of different marker sizes is available for custom designs. Formats from 27 x 15 to 100 x 60 mm cover the entire range of equipment and plant marking.

- Using modern UV LED printing technology, highly resistant and optimum printing quality can be achieved, which is resistant to solvents. The print quality is even suitable for use under harsh industrial conditions

- In conjunction with magazines, optimum printing accuracy is guaranteed
- In addition, up to 20 magazines can be automatically fed in for the BLUEMARK ID printing systems

Can be marked using:

Stick-on UniCard equipment marking for applications in process engineering

Can be marked using:

UV LED technology

Plotter

Unmarked or marked according to customer specifications

- The UC-EMLP ...-EX UniCard marking range includes self-adhesive device markers with good adhesive properties
- The marking satisfies requirements in terms of legibility, adhesion, and wipe resistance in potentially explosive areas (ATEX), in accordance with IEC/EN 60079-0, and these requirements are still met following storage in typical gas atmospheres. Phoenix Contact developed these sheets specifically for process engineering, which is where these requirements typically arise. These sheets meet the requirements for wipe resistance in accordance with DIN EN 61010-1 against aggressive media such as acetone, ethanol, and MEK
- Thanks to the special adhesive, the marker satisfies the stringent requirements of process engineering
- The BLUEMARK printing systems mark the markers quickly, easily, and cost-effectively
- Using modern UV LED printing technology, highly resistant and optimum printing quality can be achieved, which is resistant to solvents. The print quality is even suitable for use under harsh industrial conditions
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Equipment marking

UniCard equipment marking for screwing or riveting

- The UC-EMSP ... UniCard marking range includes markers that can be attached using screws or rivets
- The BLUEMARK printing systems mark the markers, which are supplied in uniform sheets, quickly and easily
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- The large temperature range for application means that the labels can be used in control cabinets as well as in the field
- The sheets provide space for including function texts
- Marking service: Phoenix Contact can custom-mark many UniCard markers according to your requirements

Notes:
 For corresponding rivet for fixing the UC-EMSP ..., see page 397.
 Drilling diagrams can be found at phoenixcontact.net/products

Can be marked using:

Equipment marking

UniSheet equipment marking for sticking onto rough or textured surfaces

- The US-EMLP-HA ... UniSheet marking range has excellent adhesive properties, thanks to its special adhesive. Particularly on rough, textured, and low-energy surfaces
- The self-adhesive plastic labels for button markings have two marking areas. There is a choice of two marking areas or one of both. The marking areas that are not necessary can be easily removed by snapping off
- The marking systems mark the markers, which are supplied in uniform sheets, quickly, easily, and cost-effectively
- The perforated markers are easy to separate and can be easily fitted
- The sheets provide space for including function texts
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- Marking service: Phoenix Contact can custom-mark many UniSheet markers according to your requirements

Can be marked using:

Equipment marking

UniSheet equipment marking for snapping into marker carriers

The US-EMP ... UniSheet equipment markers can be easily snapped into the CARRIER(L)-EMP (1000X15) ... marking profiles. They have the following advantages and ideal for:

- Equipment marking
- Module marking
- Switchgear marking
- The labels are available in different sizes corresponding to common device pitch measurements
- The marking systems mark the markers, which are supplied in uniform sheets, quickly, easily, and cost-effectively
- The perforated markers are easy to separate and can be easily fitted
- The sheets provide space for including function texts
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- Marking service: Phoenix Contact can custom-mark many UniSheet markers according to your requirements

Marking of circuit breakers, for example:

- 8.8 x 15 mm for ABB, Schneider Electric
- 17 x 15 mm for ABB, Hager, Legrand
- 35 x 15 mm for ABB, Legrand, Schneider Electric
- 52.5 x 15 mm for ABB, Legrand, Schneider Electric
- 70 x 15 mm for Legrand, Schneider Electric

Can be marked using:

UV LED technology

Equipment marking

Stick-on equipment marking

Can be marked using:

Thermal transfer for rolls

PRINTED
FOR YOU

Unmarked or marked according to customer specifications, transparent and white

- The EML ... self-adhesive equipment markers are particularly suitable for marking various types of equipment in controller, systems, and control cabinet manufacturing
- When combined with the right ink ribbon, the marking is highly resistant to chemical and mechanical influences, and can also be used under harsh industrial conditions
- In the case of high-quality ink ribbons, the marking is resistant to solvents and suitable for use even under harsh industrial conditions.
- The EML ... materials are UL-listed
- Marking service: Phoenix Contact can custom-mark many EML ... labels according to your requirements
- **Designation example:**
EML (16,5x5)RL
Lettering field width: 16.5 mm
Lettering field height: 5 mm
Type of packaging: large roll

Notes:

If processing large rolls with the THERMOMARK ROLL or THERMOMARK ROLL 2.0, use the THERMOMARK ROLL-ERH external media hub. See printers, page 40.

Equipment marking

Stick-on equipment marking, continuous

The EMLP (Ex...)R ... self-adhesive continuous markers are particularly suitable for marking miniature circuit breakers and housing covers in service panels

- The markers meet the same standards as the engraved labels and have a high-quality look
- Exact marking with the PROJECT complete marking software
- Quick and cost-effective marking with THERMOMARK ROLL ... printers from Phoenix Contact
- The thermal transfer printer cutting units make it possible to quickly and cleanly trim equipment markings precisely to the required length
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions

- Marking service: Phoenix Contact can custom-mark many EMLP ... markers according to your requirements

Highly-flexible stick-on textile foil

Can be marked using:

Thermal transfer for rolls

PRINTED
FOR YOU

Unmarked or marked according to customer specifications

The EMLC consists of a textile foil with very low restoring forces.

- Enables labels to be stuck over edges and curves
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- Marking service: Phoenix Contact can custom-mark many EMLC ... labels according to your requirements
- **Designation example:**

EMLC (5,5x20)R

Lettering field width: 5.5 mm
Lettering field height: 20 mm
Type of packaging: roll

Stick-on equipment marking, for high-temperature applications

Can be marked using:

Thermal transfer for rolls

Unmarked or marked according to customer specifications

The EML-HT is made of an acrylate film that is highly temperature-resistant. EML-HT can be used for PCB marking and in all industrial soldering processes.

- Continuous temperature range of -40°C to +180°C; up to 300°C for up to 60 seconds
- When combined with the THERMOMARK-RIBBON 110 EML-HT ink ribbon, the marking is highly resistant to high temperatures and chemicals
- The EML-HT ... materials are UL-listed
- Marking service: Phoenix Contact can custom-mark many EML-HT ... labels according to your requirements
- Single-width large roll with 8000 or 10,000 labels in one length (see illustration below)
- **Designation example:**
EML-HT (15x9)R
 Lettering field width: 15 mm
 Lettering field height: 9 mm
 Type of packaging: roll

Notes:
 If processing large rolls with the THERMOMARK ROLL or THERMOMARK ROLL 2.0, use the THERMOMARK ROLL-ERH external media hub. See printers, page 40.

new

- The EML-D is a detectable label for marking various types of equipment in controller, systems, and control cabinet manufacturing in the food industry
- The EML-D features a continuous aluminum foil strip that makes the label detectable
 - Thanks to its excellent adhesive strength, this label can be attached to rough, textured, and low-energy surfaces
 - When combined with the TM-RIBBON 110-EX ink ribbon, the printing is highly resistant to solvents, aggressive cleaning agents, acetone, and ethanol
 - **Designation example:**
EMLD (40x15)R
 Lettering field width: 40 mm
 Lettering field height: 15 mm
 Type of packaging: roll

Stick-on equipment marking, with anti-tamper protection

Can be marked using:

Thermal transfer for rolls

Unmarked or marked according to customer specifications

The EMLS is a tamper-proof label that can be used as a rating plate or seal.

- When peeled off, part of the metallic layer comes away. It leaves a triangular pattern on the label and substrate. Reliable safety function up to 80°C
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- The EMLS ... materials are UL-listed
- Marking service: Phoenix Contact can custom-mark many EMLS ... markers according to your requirements

– Designation example:

EMLS (15x9)R SR

Lettering field size: 15 x 9 mm

Type of packaging: roll

Notes:

If processing large rolls with the THERMOMARK ROLL or THERMOMARK ROLL 2.0, use the THERMOMARK ROLL-ERH external media hub. See printers, page 40.

Equipment marking

Equipment marking for rotary switches from Phoenix Contact

The EML-RS for marking rotary switches from Phoenix Contact.

- For either sticking on or snapping in with transparent EMPPR (45,8x45,8) cover
- Additional protection under extreme ambient conditions with the transparent EMPPR (45,8x45,8) cover
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- The EML-RS ... materials are UL-listed
- Marking service: Phoenix Contact can custom-mark many EML-RS ... labels according to your requirements
- **Designation example:**
EML-RS (45,8x45,8)R
Lettering field width: 45.7 mm
Lettering field height: 45.7 mm
Type of packaging: roll

Can be marked using:

Plant marking – MARKING system

Clear and extensive marking of systems not only guarantees safety but is also a legal requirement. Safety and information signs provide important information. They improve operational processes.

Phoenix Contact offers numerous marking labels for plant marking. From warning labels to multicolored symbol signs, the extremely diverse product range covers all applications. We offer a range of printing systems for marking.

To make marking systems even more efficient, RFID labels are also available to you. This portfolio is completed by a flexible mounting concept composed of different marker carriers and mounting options.

Product range overview

Plant marking 356

PMLP... and PMP... plant marking

Unmarked RFID labels 358

Unmarked labels, UniCard materials 360

Marker carriers 362

Media markers and accessories 364

PML-W... warning labels

Unmarked warning labels, UniSheet material 366

Unmarked warning labels, supplied in rolls 375

Preprinted warning labels 376

PML-P... prohibition signs

Unmarked prohibition signs, UniSheet material 367

Unmarked prohibition signs, supplied in rolls 372

PML-M... mandatory signs

Unmarked mandatory signs, UniSheet material 368

Unmarked mandatory signs, supplied in rolls 373

US-PML-ESS... emergency stop button marking

Adhesive label for marking EMERGENCY STOP buttons 369

US-PML-F... fire detection system marking

Adhesive label for marking fire alarm systems 370

PML-T... pipeline signs

Unmarked pipeline signs, supplied in rolls 378

PML-GHS... hazardous substances labels

Unmarked hazardous substances labels, UniSheet material 371

Unmarked hazardous substances labels, supplied in rolls 374

PMM... magnetic labels

Unmarked magnetic labels, supplied in rolls 385

Unambiguous marking of systems helps to avoid operating errors and is therefore a key component of occupational safety. Information and safety signs also provide important information on site, making it easier to maintain systems.

Phoenix Contact offers a wide range of labels which meet the legal requirements for correct plant marking.

The combination of printing system and marking material ensures high quality with regard to the appearance, wipe and scratch resistance.

Receive, transmit, and scan data on a contact-free basis and without visual contact thanks to RFID technology. Design your plant marking clearly, efficiently, and conveniently. To this end, various marking labels are available with integrated RFID transponder. A flexible mounting system is created when different marker carriers are combined.

Depending on the application and material for individual marking, the following marking systems can be used.

- BLUEMARK ID and BLUEMARK ID COLOR, high-speed printer with UV LED technology for marking UniCard formats and PM(L)P-RFID ... marking labels with integrated RFID transponder
- THERMOMARK CARD 2.0 and THERMOMARK PRIME, thermal transfer card printer for marking UniSheet and UniCard formats
- THERMOMARK ROLL 2.0, thermal transfer roll printer for marking material off the roll and continuous media
- THERMOMARK ROLLMASTER 300 and ROLLMASTER 600, industrial thermal transfer roll printer for large printing volumes of rolls and continuous media

Create custom safety and information signs quickly and conveniently in the PROJECT complete marking software. All pictograms approved in accordance with ISO 7010 are included. Simply select the material to be printed, the software does the rest. All pictograms are easily added via drag and drop.

The optimum dimensions, as prescribed by standards, are automatically scaled to the selected format. Then you only have to send the print job. That's how easy standard-compliant plant marking can be.

Please contact us if you are unable to find a suitable size or color for your application from the options available in our product range. It goes without saying that Phoenix Contact also offers a comprehensive marking service for plant marking applications.

PM(L)P-RFID and UC-PM(L)P

Regardless of whether it's with or without an RFID transponder, pipelines and systems can be easily and flexibly marked with the corresponding marker carriers and assembly materials.

PML-W warning labels

Warning labels are used to identify danger areas in systems and workshops. The unmarked warning labels allow you to create custom warning instructions.

PML-P prohibition signs

Prohibition signs prohibit potentially dangerous activities. They are therefore a key component of occupational health and safety.

PML-M mandatory signs

Mandatory signs prescribe a certain mode of behavior. They are used to prevent accidents in the workplace.

US-PML-ESS emergency stop button marking

According to Machinery Directive 2006/42/EG, EMERGENCY STOP buttons must be specially marked. In an emergency, they must be clearly and immediately recognizable.

US-PML-F fire detection system marking

So that the corresponding smoke alarm can be immediately identified in the event of an emergency, smoke alarms must be clearly marked.

PML-T pipeline labels

Pipeline markers are used to indicate fluids or gases. The direction of flow can also be defined by removing the arrowhead that is not required.

PML-GHS hazardous substances labels

Hazardous substance labels are used for the additional marking of the pipeline markers if hazardous substances according to the Ordinance on Hazardous Substances (GefStoffV) are transported through the pipelines.

PMM magnetic labels

Magnetic labels provide a flexible solution if you do not wish to apply permanent marking. They are quickly attached to metallic surfaces and removed just as speedily.

Plant marking

Stick-on plant marking with RFID transponder

Can be marked using:

UV LED technology

Self-adhesive label with integrated RFID transponder

Markers

- The PMLP-RFID ... marking range includes self-adhesive markers for plant marking, pre-mounted in a frame, with good adhesive properties
- The markers are integrated in a uniform matrix. They can be quickly and easily printed with the BLUEMARK ...
- The magazine geometry automatically ensures printing with a high degree of positioning accuracy
- The wide temperature range means that the labels can be used both indoors and outdoors

Inlays

- The HF transponder inlays comply with ISO 15693 and ISO 18000-3 mode 1
- The UHF transponder inlays comply with EPC Class 1 Gen 2 and ISO 18000-6C

Marker carriers for UC-PMP... and PMP-RFID... markers

- The CARRIER-PMP (110x38) is designed for mounting the UC-PMP ... and PMP-RFID ... labels. The carrier features snap-in pins which prevent the labels and the PM(S)T markers from falling out.
- The self-adhesive CARRIER/L-PMP-ENCLOSED (110x38) consists of a closed housing and has an adhesive strip on the rear side for direct fixing onto smooth and clean surfaces. For difficult surfaces, it is also possible to fix the carrier with two M5 countersunk screws. The carrier is equipped with detents that prevent the labels and the PM(S)T marker from falling out.
- The CARRIER-PMP-ENCLOSED (110x38) features a closed housing and is designed for the UC-PMP ... and PMP-RFID ... labels. Mounting takes place through the screw connection of two M5 countersunk screws. The marker carrier is equipped with detents that prevent the labels and the PM(S)T marker from falling out.

For mounting with screws, screw clamps or cable ties

Plant marking

Fixing material

– The PMT and PMST (10x38) markers for media marking in accordance with DIN 2403 are designed specifically for the CARRIER(/L)-PMP ... (110x38). These are inserted quickly and easily into the marker carriers. The PMST (10x38) sign has a hole for additional fixing into the three different marker carriers. The RVT-PA 3,5 BK fixing rivet serves to secure it.

Notes:

Plant marking

UniSheet – stick-on warning labels, unmarked

Can be marked using:

UV LED technology

Thermal transfer

PRINTED
FOR YOU

Unmarked or marked according to customer specifications

The unmarked US-PML warning labels allow you to create custom warning notices. A wide range of symbols are available in the PROJECT complete software. The warning labels offer the following features:

- Highly flexible, plasticized PVC labels which are ideal for uneven surfaces
- Suitable for indoor and outdoor use
- The warning labels conform to the ISO 7010 international standard
- The format automatically ensures printing with a high degree of positioning accuracy
- Marking service: Phoenix Contact can custom-mark all US-PML ... warning labels according to your requirements
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- The marking systems mark the markers, which are supplied in uniform sheets, quickly, easily, and cost-effectively

Plant marking

Stick-on pipeline markers, unmarked

The color preprinted PML-T ... pipeline markers allow you to create custom pipelines in accordance with DIN 2403.

- Finely perforated arrowheads enable the arrowheads which are not required to be easily removed
- When used in combination with the PML-GHS hazardous substances labels, marking conforming to the Hazardous Substances Ordinance (GefStoffV) is possible
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- Marking service: Phoenix Contact can custom-mark many markers according to your requirements

– Designation example: PML-T101 (26x280)R

Preprinted color: ...
 Lettering field length: 280 mm
 Lettering field height: 26 mm
 Type of packaging: roll

Plant marking

Stick-on circuit markings, color preprinted, without symbol

The color preprinted PML-C (D39)R labels on a roll allow you to create custom circuit markings.

- The label consists of soft, highly flexible PVC film that molds itself to uneven surfaces
- Outdoor-durable for up to eight years when used in a temperature range from -40°C to 90°C
- Extremely high-quality appearance
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions

Thermal transfer for rolls

Unmarked or marked according to customer specifications

The PMM ... magnetic continuous markers supplied in rolls provide an individual and flexible marking solution, e.g., for marking stock. A wide range of symbols, linear codes, and 2D codes are available in the PROJECT complete software.

- High adhesive strength
- The flexible magnetic tape will also adhere to round objects with a radius of 12 mm and higher
- Quick and cost-effective marking with THERMOMARK ... roll printers from Phoenix Contact
- The thermal transfer printer cutting units make it possible to quickly and cleanly trim equipment markings precisely to the required length
- When combined with the right ink ribbon, the marking is highly resistant to solvents and mechanical influences, and can also be used under harsh industrial conditions
- **Designation example:**

Hand tools – TOOL fox

The TOOL fox range of tools offers processing and measuring tools for all electrical engineering applications.

The ergonomically designed tools for cutting, stripping, crimping, screwing, and testing impress with their optimum handling and quality. Specially hardened tool steels ensure maximum durability.

Cutting machines, stripping machines, and crimping machines are available which can be used to automate steps.

A wide range of connectors rounds off the product range.

Product range overview

Hand tools	388
CUTFOX ... cutting tools and UNIFOX ... universal tools	
Cable cutters	390
Cutting tools for special applications	392
Universal tools	395
Cable duct, profile, and DIN rail cutters	399
MICROFOX electronics pliers	402
WIREFOX stripping tools	
Stripping tools	404
Stripping tools	410
CRIMPFOX pressing and crimping tools	
CRIMPFOX 4 IN 1 multifunctional crimping pliers	414
Crimping pliers for ferrules	416
Crimping pliers for ring cable and tube lugs	422
Universal basic pliers for connectors up to 120 mm ²	427
Crimping pliers for slip-on sleeves	428
Crimping pliers for turned contacts	432
Crimping pliers for coaxial, FO, D-SUB, CATV, data connectors, and solar connectors	433
Universal basic pliers	435
CRIMPHANDY portable hand-held machine	440
SCREWFOX screwdriver tools	
Screwdrivers	442
Voltage and continuity testers	450
Cordless screwdrivers	454
Socket wrenches	458
Control cabinet keys	461
TESTFOX measuring tools	
Digital multimeters	463
Tool sets	467
Customer-specific hand tools and tool sets	473
Ferrules and connectors	480

Professional cutting

Professional stripping

Professional crimping

There is an optimum cable cutter available for every application. The various versions enable professional processing of conductors and cables with a diameter of up to 100 mm. All parts of the cable cutters that are subject to particular strain are tempered and specially hardened.

Profile cutters are available for rapid processing of DIN rails and cable ducts without chips or burrs. An optional hydraulic unit can be attached to convert manual DIN rail cutters into automatic ones.

The stripping tools can strip all types of conductors and cables quickly, precisely, and reliably. They adapt automatically to the conductor cross section concerned.

The CRIMPFOX 4 IN 1 are multifunctional crimping pliers for processing conductors and ferrules. A variety of work steps can be performed with just a single tool: cutting, stripping, twisting, and crimping.

The product innovation for switchgear manufacturing is the CRIMPHANDY, a battery-powered, portable hand-held device. The CRIMPHANDY strips and crimps the conductor in under two seconds. This results in time savings of 75%.

The extensive range of professional crimping pliers can be used to process a variety of contact types with a cross section of up to 120 mm². The innovative design and ergonomically shaped handles reduce the forces required by up to 30 percent.

With their interchangeable dies, the CRIMPFOX-M universal crimping pliers can be used to process all kinds of contacts. The dies can be changed quickly and easily without the need for additional tools.

With their precise torque-setting, the torque and cordless screwdrivers are the perfect complement to the Phoenix Contact range of screw terminal blocks. The wide range of hardened BIT screwdriver inserts makes the products suitable for universal use.

Our multimeters, current pliers, and voltage testers are high-quality measuring tools, which have been tested and approved in accordance with national and international standards.

Hand tools

CUTFOX cable cutters

- CUTFOX ... cable cutters for professional cutting results
- Ideal cutting geometries enable the lowest actuation forces
- Ergonomic handle design to eliminate fatigue when working
- All parts of the cable cutters that are subject to particular strain are tempered or specially hardened

Up to a maximum conductor diameter of 12 mm

Up to a maximum conductor diameter of 18 mm

Description
Cable cutter , for copper and aluminum (flexible) up to 12 mm diameter (up to 35 mm ²), size: 165 mm
Cable cutter , angled, with adjustable screw joint, for copper and aluminum (flexible) up to 18 mm diameter (up to 50 mm ²), size: 180 mm
Electrician's scissors , high cutting performance, thanks to micro-serrated cutting area, suitable for copper, aluminum (flexible), Kevlar® fibers, and plastic, two-component non-slip soft-grip handles, ergonomic design, adjustable screw joint

- CUTFOX ... one-handed ring cable cutters for professional cutting results
- Extremely robust design
- Minimum deformation of the conductors and cables
- Can be released in all positions
- Superb cutting quality
- Little force needed due to ratchet function

Up to a maximum conductor diameter of 50 mm, steel-armored

Up to a maximum conductor diameter of 45 mm

Description
Ring cable cutter , with ratchet function, for copper and aluminum (flexible) up to a diameter of 50 mm, for steel-armored CU/AL cables, for stranded steel cables up to a diameter of 12 mm, equipped with needle bearings, size: 260 mm
Ring cable cutter , with ratchet function, for copper and aluminum (flexible) up to 45 mm diameter (up to 300 mm ²), size: 260 mm
Ring cable cutter , with ratchet function, for copper and aluminum (flexible) up to 52 mm diameter (up to 300 mm ²), size: 325 mm

CUTFOX one-handed front cable cutters

- CUTFOX ... cable cutters for professional cutting results
- With ratchet function for minimum effort
- All parts of the cable cutters that are subject to particular strain are tempered or specially hardened
- Ideal in tight workspaces
- Adjustable screw joint
- Can be released in all positions
- Particularly robust

WIREFOX stripping tools

- Ergonomically shaped pliers
- Anti-slip handle design provides a safe and comfortable grip
- WIREFOX ... stripping pliers feature an automatic adjustment mechanism for a wide range of different types of insulation and conductor sizes
- Practical integrated wire cutter
- Highly adjustable limit stop for the stripping length

– The blade cartridges are replaced quickly and easily. They can be combined with each other

Conductor / cable stripping range	
Conductor / cable	[mm ²] / AWG
Stripping length up to ...	[mm]
Wire cutter rigid // flexible	[mm ²] / AWG

Description
Stripping tool , for cables and conductors (specifically also intended for rubber and other kinds of special insulation) with a cross section of 0.1 - 4 mm ² , self-adjusting, stripping length of up to 18 mm, cutting capacity: rigid up to 1.5 mm ² , flexible up to 10 mm ²

WIREFOX stripping tools

- The right tool for every application
- Conductors and cables with all kinds of insulation are stripped up to a diameter of 40 mm
- The blades are precision ground. They represent long-term, reliable use
- Quick, easy, and reliable to use

Conductor diameter of 2.5 - 11 mm

ERC

Description
Stripping tool , for stripping multicore signal, control, and fiberglass cables with 2.5 - 11 mm Ø, insulation thickness of up to 1 mm
Stripping tool , for stripping installation cables with 8 - 13 mm Ø, for example, NYM 3x1.5 mm ² to NYM 5x2.5 mm ² , single-wire stripping, 0.2 - 4 mm ² , with blade for lateral cutting and extendable knife
Stripping tool , for stripping cables with 4.5 - 40 mm Ø, insulation thickness of up to 4.5 mm, swivel blade for round, longitudinal, and spiral cuts
Stripping tool , for stripping cables (especially FO cables) with 4 - 16 mm Ø
Stripping tool , for stripping cables with 8 - 28 mm Ø

CRIMPFOX 4 IN 1 multifunctional crimping pliers

- The CRIMPFOX 4 IN 1 multifunctional crimping pliers are used to process taped ferrules in accordance with DIN 46228-4 and UL 486F
- 4 functions combined in a single tool: cutting, stripping, twisting, and crimping
- An effective handling process enables all steps to be performed without putting the tool down

- Fitted with a releasing pressure lock, the pliers provide consistently high-quality crimping. They are ideally suited to use in industrial applications

- The robust stripping unit with its special blade geometry provides permanently consistent stripping results
- Length and cross section settings are not necessary
- In order to re-establish the twist which is lost during the stripping process, a twisting system is included

- The cross section can be conveniently changed in a matter of seconds by replacing the magazine which is loaded with taped product
- The Al...S1 ferrules in accordance with UL 486F are UL-certified when used in combination with the CRIMPFOX 4 IN 1

Notes:

¹⁾ These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

CRIMPFOX crimping pliers for TWIN ferrules

- These pliers are specially designed for convenient, high process reliability of TWIN ferrules
- The innovative mechanical design of these pliers means that up to 25% less force is required compared to conventional pliers.
- The balanced weight distribution ensures low-fatigue, convenient application
- The AI-TWIN ferrules in accordance with UL 486F are UL-certified when used in combination with the CRIMPFOX 16R TWIN. For further information, visit www.phoenixcontact.com

Conductor cross section 2 x 6 ... 2 x 16 mm²

Area of application

Conductor [mm²] / AWG
Crimping

Description

Crimping pliers, for TWIN ferrules in accordance with UL 486F, three marked die stations, unlockable pressure lock, lateral entry

Replacement die

for TWIN ferrules (AI-TWIN ...) 2 x 6, 2 x 10 and 2 x 16 mm²

Replacement recuperating spring

CRIMPFOX universal pliers for accommodating various crimp inserts

Notes:
For more crimping dies for ferrules, cable lugs, slip-on sleeves, turned contacts, coaxial, RJ45, and RJ11 connectors, visit phoenixcontact.net/products

Basic pliers

- One of the key features of the CRIMPFOX-M crimping pliers is the way the crimp inserts can be quickly replaced without the need for tools
- The variety of inserts makes it a space-saving universal tool for all crimping applications
- Suitable for one and two-hand operation. Contacts up to 50 mm² are also processed easily, with minimum effort

Description
Basic pliers , for accommodating dies for various contact types, unlockable pressure lock, lateral entry
Crimping pliers set , consisting of CRIMPFOX-M and dies 1212074, 1212079, 1212080, 1212081

Hand tools

Dies for the CRIMPFOX-M universal pliers

A wide variety of interchangeable crimp dies enables use in all areas of application, with just one crimping tool, the CRIMPFOX-M.

- Die upper and lower parts are connected securely to each other and can therefore not be swapped
- Delivery is in an alignable storage box

Notes:
For more crimping dies for ferrules, cable lugs, slip-on sleeves, turned contacts, coaxial, RJ45, and RJ11 connectors, visit phoenixcontact.net/products

Portable crimping machine for ferrules, cable lugs, and connectors

A key feature of the CF 500 is its easy handling and high degree of flexibility. A huge range of different contact types can be processed with this crimping device. Positioning aids make it easier to crimp the contacts.

- For further information, accessories, and technical data, refer to the AUTOMATIC DEVICES section

Notes:

Further dies and accessories, as well as technical data, can be found at phoenixcontact.net/products

An application video can be found in the download area for the relevant product on our website at phoenixcontact.net/products.

Connectors up to 50 mm²

Portable automatic stripping and crimping device for taped products

- The compact stripping and crimping device can be used to process taped ferrules with insulating collars in accordance with DIN 46228-4 / UL 486F
- Up to 1000 conductors are processed per hour
- The conductor is stripped in a single operation and is crimped with a ferrule to a high standard of quality

- For further information, accessories, and technical data, refer to the AUTOMATIC DEVICES section

Notes:

¹⁾ Depends on the characteristics of the conductor material and insulation material.

An application video can be found in the download area for the relevant product on our website at phoenixcontact.net/products.

Conductor cross sections from 0.25 to 2.5 mm²

Description
Stripping and crimping device , 230 V version, for taped insulated ferrules 0.25 - 2.5 mm ² , sleeve length 8 mm, incl. conversion kits 0.5 - 2.5 mm ² ¹⁾
Stripping and crimping device , 120 V version, for taped insulated ferrules 0.25 - 2.5 mm ² , sleeve length 8 mm, incl. conversion kits 0.5 - 2.5 mm ² ¹⁾

Stripping and crimping device for loose ferrules

The stripping and crimping device can be used to process loose ferrules from 0.25 to 4 mm² with insulating collars in accordance with DIN 46228-4 / UL 486F.

The optimized sensor technology has improved the processing of small cross sections.

- The conductor is stripped and crimped with a ferrule to a high standard of quality in a single step, which enables up to 1000 conductors to be processed per hour
- For further information, accessories, and technical data, refer to the AUTOMATIC DEVICES section

Notes:

Accessories and replacement parts for older device versions can be found at phoenixcontact.net/products.

¹⁾ Depends on the characteristics of the conductor material and insulation material.

CRIMPHANDY, portable crimping device

The CRIMPHANDY represents innovation for switchgear manufacturing. You can strip and crimp your conductors in under two seconds, using this portable hand-held device. That's 75% less time than before.

- The CRIMPHANDY impresses with its easy, effortless handling, which helps protect your joints and tendons
- The compact light weight is ideal for mobile use in the field. Up to 2000 crimping operations can be performed, thanks to the high-performance lithium-ion polymer battery
- Automatic cross section monitoring prevents faulty crimping as a result of incorrect conductor sizes
- The attachable waste receptacle collects the discarded insulation. It thereby helps to ensure a clean working environment
- The cutting unit provides a convenient option of cutting the conductors to length right at the device
- The AI...S ferrules in accordance with UL 486F are UL-certified when used in combination with the CF CRIMPHANDY

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

SCREWFOX screwdriver and actuation tool for PT, ST, and QTC terminal blocks

- In addition to their standard application, these screwdrivers are particularly suited to actuating terminal blocks from the PT ..., ST ..., and QTC ... series
- The defined blade angle opens the spring terminal block as far as possible without leaving any damage
- The ST-BW ... curved versions are ideal for use in narrow areas

SCREWFOX bit hand holder

The bit hand holder SF-M BH is equipped with ergonomic 2-component handles. This enables fatigue-free working, while transmitting maximum power and thereby enabling a secure hold.

- The hexagon head of the handle prevents it rolling away
- Single-handed bit change, thanks to special locking mechanism
- With magnet

- The freewheeling housing of the bit holder enables the tool to go right to the tip during the screw procedure

SCREWFOX screwdriver tools

SHN ...

- Ergonomically designed two-component grip for fatigue-proof and non-slip use

SF-THEX ...

- Ergonomically designed handles ensure an optimum grip. They help avoid fatigue when working
- The hardened blades are designed for durability
- Optimum edge geometries increase the bearing surface and prevent the screws from being over-tightened
- The hexagonal and Torx® L-keys are aligned in a practical bracket, that enables secure storage and quick removal.
- The matt chrome and phosphate-coated surfaces provide high corrosion protection
- With ball head on long limbs, working on hard to access areas is possible
- Optimum edge geometries increase the contact surface and protect the screws. As a result, higher torques can be applied

TESTFOX voltage and continuity tester

- DC and AC voltage tests in the range from 12 V to 1000 V AC/1000 V DC
- Acoustic and optical continuity test
- Vibration alarm for safe voltage detection
- Shock-proof housing that is protected against dust and splash water, IP65

Voltage tester

General data

Voltage range	[V DC]	12 ... 1000
Voltage range	[V AC]	12 ... 1000

TESTFOX, digital current probe multimeter

- The current probes can be used for voltages of up to 600 V, category III
- They combine the functions of a digital multimeter with those of a current probe
- Contained within a compact and practical housing, so ideal for use in cramped conditions
- All measuring ranges are protected against overload

For DC and AC current

General data

Display scope	4000 digits
Accuracy of display	0,5%
AC voltage measuring range	0.1 mV ... 600 V
DC voltage measuring range	0.1 mV ... 600 V
AC current measuring range	10 mA ... 300 A
DC current measuring range	10 mA ... 300 A
Resistance measuring range	0.1 Ω ... 40 MΩ
Continuity test range	Acoustic (50 Ω)
Degree of protection	IP30
Measuring category	CAT III 300 V / CAT II 600 V
Power supply	2 x micro battery 1.5 V, LR03, AAA
Test certificate	IEC/EN 61010-1, DIN VDE 0411

TESTFOX digital multimeter

Digital multimeter, with extended scope of functions

- You are bound to be impressed by the technology of the digital multimeters and their quality
- The devices are extremely versatile
- Tested and approved in accordance with applicable IEC/EN 61010 standards independently of certification body
- Suitable for measuring AC voltages and resistance as well as testing continuity and diodes
- TESTFOX M-1 also allows you to measure DC and AC currents, capacitance, and frequencies. Furthermore, it measures temperatures in the -20°C to +800°C range

High-level of safety

- Phase voltages can be detected precisely, thanks to the audible and red light signals
- The devices are used for voltages of up to 600 V category III or 1000 V category II
- They provide professional service technicians and operating engineers with a higher level of protection, thereby ensuring maximum safety during work

Safe cable breakage detection

- Cable breaks and defective lamps in exposed cable ends are followed from the supply side of the phase right through to the point of interruption

General data

Hand tools

CRIMPFOX pliers, laser marked according to customer specifications

- Customize your crimping tool!
- You can now use robust laser engraving to mark CRIMPFOX pliers
- Individual laser marking prevents your tools from being mixed up

Notes:
 Matching accessories can be found in main catalog 3 or the product area on our website at phoenixcontact.net/products.
¹⁾ Tools with customer-specific laser marking can be ordered quickly and easily in the product area on our website at phoenixcontact.net/products.

- The advantages of our CRIMPFOX tools:
- Consistently high crimping quality
 - Unlockable pressure lock
 - Marked die stations for precise processing of the relevant cross sections
 - Easy work thanks to improved force transfer
 - Ergonomically designed, non-slip handles

Description

Crimping pliers, for ferrules, in accordance with DIN 46228-1-4 and UL 486F, five marked die stations, **laser marked according to customer specifications¹⁾**
 Lateral entry, 0.25 - 6.0 mm², unlockable pressure lock, trapezoidal crimp

Front insertion, 0.5 - 6 mm², square crimp

Crimping pliers, unlockable pressure lock, lateral entry, oval crimp, **laser marked according to customer specifications¹⁾**

For insulated cable lugs (light green, red), 0.14 - 1 mm², three marked die stations

For insulated cable lugs (red, blue), 0.5 - 2.5 mm², two marked die stations

Crimping pliers, for uninsulated cable lugs, three marked die stations, 0.34 - 2.5 mm², unlockable pressure lock, lateral entry, indent crimp, **laser marked according to customer specifications¹⁾**

Crimping pliers, for uninsulated slip-on sleeves 2.8/4.8/6.3 mm, three marked die stations, B-crimp, 0.1 - 1.5 mm², unlockable pressure lock, lateral entry, **laser marked according to customer specifications¹⁾**

Crimping pliers, for ferrules in accordance with DIN 46228-1/-4 and UL 486F, self-adjusting die, trapezoidal crimp, 0.5 - 6 mm², unlockable pressure lock, **laser marked according to customer specifications¹⁾**

Front insertion
 Lateral entry

Crimping pliers, three marked die stations, 0.5 - 6 mm², oval crimp, unlockable pressure lock, lateral entry, **laser marked according to customer specifications¹⁾**

For insulated cable lugs, symmetrical (red, blue, yellow)

For insulated cable lugs, asymmetrical (red, blue, yellow)

Crimping pliers, for ferrules in accordance with DIN 46228-1/-4 and UL 486F, unlockable pressure lock, lateral entry, **laser marked according to customer specifications¹⁾**

Three marked die stations, 10 - 25 mm²

Two marked die stations, 35 - 50 mm²

Hand tools

Ferrules without insulating collar, in accordance with DIN 46228-1

- The ferrules without plastic sleeve are made from soft tin-plated electrolytic copper
- The ferrules correspond to the requirements of DIN 46228-1 and UL 486F in terms of dimension
- The A 0,25... can also be used to process 0.14 mm² conductors
- UL and CSA-certified

Conductor cross sections from 0.14 to 120 mm²

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Ferrules with insulating collar, in accordance with DIN 46228-4: 1990-09 and UL 486F

- The ferrules with plastic sleeve are made from soft tin-plated electrolytic copper
- The insulation reliability of close connections is increased and the splicing of wires is prevented
- The AI 0,25... can also be used to process 0.14 mm² conductors
- The ferrules correspond to the requirements of DIN 46228-4 and UL 486F
- UL and CSA-certified

Notes:

1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Conductor cross sections from 0.14 to 120 mm²

Hand tools

Ferrules with insulating collar with color code in acc. with NFC 63-023

- The ferrules correspond to the requirements of DIN 46228-4 and UL 486F in terms of dimension
- The color code of the plastic insulating collar corresponds to the French standard NFC 63-023: 1994-02
- The metal sleeves are made from soft tin-plated electrolytic copper
- UL and CSA-certified

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Ferrules with insulating collar in special colors

- The insulation reliability of close connections is increased and the splicing of wires is prevented
- The conically shaped, Easy Entry insulating collar ensures easy and correct conductor insertion
- The ferrules correspond to the requirements of DIN 46228-4 and UL 486F in terms of dimension
- UL and CSA-certified

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Hand tools

Ferrules for special applications

- These ferrules provide a practical way of crimping conductors with increased insulation
- This type of ferrule is used with AWG cables in particular. The insulating collar has an enlarged diameter
- Color code in accordance with DIN 46228-4 and UL 486F
- CSA-certified

Notes:
Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Ferrules for special applications

- The TWIN ferrules provide a practical way of crimping two conductors in one ferrule
- Chain bridges can be easily implemented using these special ferrules
- Different versions of the individual TWIN ferrules can be selected for specific applications
- These ferrules correspond to the requirements of UL 486F
- UL and CSA-certified

Conductor cross sections from 2 x 0.5 to 2 x 16 mm²

Notes:
 1) These color and/or length variants of ferrules are currently not included in UL 486F and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Ferrules with plastic sleeve, taped, supplied on large reels

- Ferrules in tape format for automatic processing
- The ferrules are supplied on large reels, each containing a quantity of up to 3000
- The ferrules correspond to the requirements of DIN 46228-4 and UL 486F
- UL and CSA-certified

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Ring cable lugs, insulated with additional crimp zone for conductor insulation

- The C-RCEI series is equipped with an additional crimp zone for conductor insulation
- The conductor and insulation are crimped together, thereby increasing the vibration resistance and tensile strength
- The sleeves taper conically. This enables easy and correct conductor insertion

Conductor cross sections from 0.5 to 6 mm²

Hand tools

Fork-type cable lugs, uninsulated

- The fork-type cable lugs without plastic sleeve feature a hard-soldered neck. In conjunction with the CRIMPFOX-RC ... range of pliers they can be used to achieve maximum conductor pull-out forces
- They consist of high-quality electrolytic copper with galvanic tin plating for maximum corrosion protection

Conductor cross sections from 0.5 to 6 mm²

Fork-type cable lugs, insulated

- The hard-soldered crimping area guarantees the best mechanical properties and permits horizontal or even vertical crimping
- The insulated versions are halogen-free and feature “EASY ENTRY” technology

Conductor cross sections from 0.5 to 6 mm²

Automatic devices – TOOL fox

Phoenix Contact offers a comprehensive range of innovative automatic tools for flexible and fast processing of conductors and cables where various steps can be automated.

A combination of functionality, quality, and short setup times guarantees high levels of flexibility while ensuring excellent results every time. The TOOL fox range comprises devices for cutting, stripping, and crimping conductors and cables.

Product range overview

Automatic devices	504
Automatic cutting device for conductors and cables	506
Stripping machine	507
Pneumatic crimping pliers	508
Portable crimping machine for ferrules, cable lugs, and connectors	510
CRIMPHANDY portable hand-held machine	512
Portable stripping and crimping machine for taped products	514
Ferrules with plastic collar, taped	515
Stripping and crimping machine for bulk goods	516

Automatic stripping

Automatic crimping

Automatic stripping and crimping in a single operation

The CUTFOX 10 automatic cutting device cuts conductors and cables with a cross section of up to 10 mm². Rigid and flexible conductors can be cut to length with millimeter precision. The length and number of cuts are entered via the user-friendly display. The CUTFOX 10 automatically adapts to the diameter when there is a change in material.

The WF 1000 stripping machine enables the automatic stripping of conductors up to 6 mm² or cables with diameters up to 6 mm. Partial removal of the insulation is possible.

The stripping dimensions are set individually via rotary buttons. They are shown on the display.

The Crimphandy is a portable hand-held device for stripping and crimping conductors and ferrules in one step. Automatic monitoring functions ensure permanent, high-quality crimping.

The CF 500 crimping device is characterized by its high press capacity in a compact design as well as its high degree of flexibility. Thanks to the interchangeable dies, it is suitable among other things for insulated cable lugs, tubular and crimping cable lugs, slip-on sleeves, and ferrules up to 50 mm².

The CF 3000-2,5 stripping and crimping device processes ferrules with insulating collars in accordance with DIN 46228-4 and UL 486F. This device allows conductors with a cross section range of 0.25 - 2.5 mm² to be stripped and fitted with ferrules in one operation. The automatic device can be adapted to various cross sections in under a minute.

The CF 1000 stripping and crimping device processes loose ferrules (bulk goods) with insulating collars in accordance with DIN 46228-4 and UL 486F. These automatic devices allow conductors to be stripped and fitted with ferrules in one operation.

Automatic devices

Automatic cutting device for conductors and cables

- The automatic cutting device can be used to cut conductors, cables, and similar profiles
- It impresses with its easy handling and enables materials to be changed in a matter of seconds
- The desired length and number of cuts can be specified in a user-friendly way via the display
- The drive and measurement rolls automatically adjust to each inserted diameter
- Additional inputs and settings are not necessary
- High length accuracy, thanks to separate measuring and transport roll
- Light weight enables mobile use

Notes:

Stripping machine

- This compact stripping machine automatically insulates conductors with a cross section of 0.08 to 6 mm²
- Multi-strand cables with a diameter of up to 6 mm are also stripped
- Partial stripping is supported
- Special insulations such as PTFE and silicon can be stripped, in addition to standard insulations
- The clamping force automatically adjusts itself to the required extraction force, this reduces/prevents pressure points on sensitive insulation
- The stripping dimensions are set individually via rotary buttons. They are shown on the clear display

Pneumatic crimping pliers

- These crimping pliers are pneumatic tools for ferrules in accordance with DIN 46228-1/-4 and UL 486F with a cross section range of 0.25 to 10 mm².
- The perfect alternative to the hand pliers, which protects joints and tendons. They are light, easy to handle, and perfect for control cabinet manufacturing.
- The ZAP...T table models are designed for work at the workbench and are equipped with a foot switch. This keeps both hands free for equipping the conductor.

Automatic devices

Portable crimping machine for ferrules, cable lugs, and connectors

A key feature of the CF 500 is its easy handling and high degree of flexibility. A huge range of different contact types can be processed with this crimping device. Positioning aids make it easier to crimp the contacts.

- The crimp inserts can be changed quickly and easily in a matter of seconds
- The carrier handle means that it is also suitable for mobile use
- The crimping procedure is activated via a foot switch. This keeps both hands free for equipping the conductors with the appropriate contacts
- The contact is fixed in place before the crimping procedure via an additional two-stage operating mode. This makes it easier to process crimp contacts and prevents incorrect crimping
- The A ... and AI ... ferrules in accordance with UL 486F are UL-certified when used in combination with the CF 500 and corresponding dies. For further information, visit www.phoenixcontact.com.

Notes:
 Further dies and accessories, as well as technical data, can be found at phoenixcontact.net/products

Dies for CF 500 crimping machine

The large number of crimping dies makes the CF 500 an all-rounder.

- In addition to the standard dies, there are special dies, that, among other things, enable assembly of the FBS ...-4, FBS ...-5, FBS ...-6 or FBS ...-8 plug-in bridges from the CLIPLINE complete system
- If the dies you require are not listed, please contact us

Automatic devices

CRIMPHANDY, portable crimping device

The CRIMPHANDY represents innovation for switchgear manufacturing. You can strip and crimp your conductors in under two seconds, using this portable hand-held device. That's 75% less time than before.

- The CRIMPHANDY impresses with its easy, effortless handling, which helps protect your joints and tendons
- The compact light weight is ideal for mobile use in the field. Up to 2000 crimping operations can be performed, thanks to the high-performance lithium-ion polymer battery
- Automatic cross section monitoring prevents faulty crimping as a result of incorrect conductor sizes
- The attachable waste receptacle collects the discarded insulation. It thereby helps to ensure a clean working environment
- The cutting unit provides a convenient option of cutting the conductors to length right at the device
- The AI...S ferrules in accordance with UL 486F are UL-certified when used in combination with the CF CRIMPHANDY

Notes:

¹⁾ These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Automatic devices

Portable automatic stripping and crimping device for taped products

- The compact stripping and crimping device can be used to process taped ferrules with insulating collars in accordance with DIN 46228-4 / UL 486F
- Up to 1000 conductors are processed per hour
- The conductor is stripped in a single operation and is crimped with a ferrule to a high standard of quality
- Particularly suitable for pre-assembling conductors
- Thanks to its compact and lightweight design, it can also be used as a portable solution for transport between different work locations
- The automatic device can be adapted to various cross sections in under a minute
- Color coding in accordance with ferrule standard DIN 46228-4 / UL 486F makes the assignment of modification components really clear
- The AI ...-B ferrules in accordance with UL 486F are UL-certified when used in combination with the CF 3000-2,5. For further information, visit www.phoenixcontact.com

Notes:
 1) Depends on the characteristics of the conductor material and insulation material.

- The taped ferrules have been developed specifically for the CF 3000-2,5 crimping machine
- UL and CSA-certified
- Available in the main color codes up to 2.5 mm²
- The ferrules correspond to the requirements of DIN 46228-4 and UL 486F
- Can be used to wire all terminal blocks, especially those of the CLIPLINE complete system

Notes:
 1) These color and/or length variants of ferrules are currently not included in DIN 46228-4 and UL 486F, and are therefore not UL-certified. As of 11/2018. Up-to-date information on certification can be found under UL file E488001 at www.UL.com or at phoenixcontact.com.

Automatic devices

Stripping and crimping device for loose ferrules

The stripping and crimping device can be used to process loose ferrules from 0.25 to 4 mm² with insulating collars in accordance with DIN 46228-4 / UL 486F. The optimized sensor technology has improved the processing of small cross sections.

- The conductor is stripped and crimped with a ferrule to a high standard of quality in a single step, which enables up to 1000 conductors to be processed per hour
- With the integrated counter, you get an overview of the quantities
- The pull-out forces conform to the requirements of EC/EN 60999, IEC/EN 60947, and UL 486F
- The press unit is switched off at the touch of a button so that the CF 1000 can be used as a stripping machine
- A cross section change can be carried out in just a few steps without any need for tools. The sleeve length can be easily set with a screwdriver. Additional settings are not necessary. You can order additional feeder bowls as accessories for an even faster cross section change
- Robust design, suitable for industrial bulk processing
- High reliability, thanks to maintenance and wear-free components
- The Al ... ferrules in accordance with UL 486F are UL-certified when used in combination with the CF 1000-1,5. For further information, visit www.phoenixcontact.com

Notes:
 Accessories and replacement parts for older device versions can be found at phoenixcontact.net/products.
 1) Depends on the characteristics of the conductor material and insulation material.

Stripping and crimping device for loose ferrules

The CF 1000-10 processes loose ferrules from 4 ... 10 mm² with plastic collars in accordance with DIN 46228-4 / UL 486F

- The conductor is stripped and crimped with a ferrule to a high standard of quality in a single step, which enables up to 1000 conductors to be processed per hour
- With the integrated counter, you get an overview of the quantities
- A cross section change can be carried out in just a few steps without any need for tools. The sleeve length can be easily set with a screwdriver. Additional settings are not necessary. You can order additional feeder bowls as accessories for an even faster cross section change
- The extraction forces conform to the requirements of IEC/EN 60999 and IEC/EN 60947
- The Al ... ferrules in accordance with UL 486F are UL-certified when used in combination with the CF 1000-10. For further information, visit www.phoenixcontact.com

Notes:

For ferrules for our CF 1000..., refer to the hand tools section starting on page 480.

Installation and mounting material – CABINET add-on

The CABINET add-on range includes mounting material as well as mounting equipment and additional control cabinet components.

By using suitable tools and control cabinet components, switching devices and control cabinets can be implemented in a way that saves both time and space. We offer a comprehensive range of products for this.

DIN rails and end brackets, for example, ensure the secure attachment of electrical connecting elements and components inside the control cabinet. Additional safety is ensured by cover profiles, while shield clamps enable EMC-compliant wiring. We also offer a comprehensive selection of cable protection systems and cable ducts right through to cable ties for every application.

The CLIPSAFE housing range also provides comprehensive protection for your applications in industrial environments and in process technology. On request, empty enclosures can be supplied ready equipped with terminal blocks and cable glands.

The housings are supplied with corresponding equipment approval for use in potentially explosive areas. Our worldwide sales network provides professional customer support and short delivery times.

ABS terminal boxes	646
Ex cable glands	650

Sockets that can be mounted on DIN rails serve for easy connection of electrical auxiliary devices for assembly, testing, lighting, etc. They enable worldwide use in switchgear, control cabinets, and in simple sub-distributions. Use in all parts of the world makes it essential to offer the sockets with pin connector patterns that are standard in each country, in accordance with the currently applicable standards and regulations.

The standard DIN rail is a core product in the control cabinet. In addition to standard profiles such as NS 15 and NS 35 rails, our portfolio also includes special profiles, various materials, and surface finishes to meet a wide range of requirements.

The shield clamps from the SK ... and SKS ... series excel, thanks to simple mounting, as well as the busbar right on the mounting plate. The cables and conductors can be easily connected by means of screw or spring connection.

The cover profiles are used to cover live parts. They also prevent unintended actuation of terminal points or disconnect terminal blocks.

When used in conjunction with the various standard DIN rails, the end brackets ensure that the components remain securely attached to the rails. A comprehensive range of end brackets is available for specific applications.

Phoenix Contact offers various connection terminal blocks, branch terminals, and feed-in terminals for busbars with corresponding accessories.

The Europe connectors are available in various versions and sizes. Wire protection. The individual positions can be separated easily by twisting – no tools necessary. The Push-in connection technology of the junction box connector series makes it easy to insert rigid conductors or conductors with ferrules into the terminal point. Low insertion forces and high pull-out forces ensure a secure connection.

The broad spectrum of wiring channels enables a flexible, optimum use of the space available in your control cabinet. A T-connection or cross connection is established through a simple, burr-free break out of the lateral bridges.

The protective hoses, made from plastic-coated spring steel, steel, and stainless steel provide optimum protection in the respective area of use. Countless accessories, such as cable glands and strain relief, enable easy, secure latching.

Component mounting

DIN rails NS 15, flat design

- The design of the DIN rails complies with European standard EN 60715
- High degree of dimensional accuracy and surface finish
- All DIN rails are also available cut to length

The DIN rails are available in various materials and surface coatings:

- Zinc plated, for indoor applications
- White passivated, for indoor applications
- Galvanized and white passivated (also referred to as thin layer passivated or blue passivated), for indoor applications
- Zinc plated and thick layer passivated, for indoor and protected outdoor applications
- Copper and aluminum; as a result of their improved conductivity, these versions can also be used as PEN busbars
- Stainless steel, for indoor and outdoor applications, plus can also be used in aggressive environments

Notes:
For dimensional drawings and ordering examples, see page 537.
For PPS ... DIN rail profile cutters, see page 400

- High degree of dimensional accuracy and surface finish
- All DIN rails are also available cut to length

The DIN rails are available in various materials and surface coatings:

- Zinc plated, for indoor applications
- Galvanized and white passivated (also referred to as thin layer passivated or blue passivated), for indoor applications
- Zinc plated and thick layer passivated, for indoor and protected outdoor applications
- Copper and aluminum; as a result of their improved conductivity, these versions can also be used as PEN busbars
- Stainless steel, for indoor and outdoor applications, plus can also be used in aggressive environments

M6	silver	GLM 6	1201785	100

Example configuration for NS 35/15 UNPERF/SO/...:

(Minimum order quantity: 20 pcs.)

When ordering 20 unperforated NS 35/15 DIN rails with 6 mm \varnothing end holes at both ends (as 20 mm elongated holes, the hole center of which is 50 mm from the end of the rail) with a length of 550 mm, the following must be specified:

Quantity	Order No.	Length in mm	Dim. A	Dim. B	Dim. C
20		550	6	50	20

Example configuration for NS 35/7,5 UNPERF/...:

(Minimum order quantity: 20 pcs.)

When ordering 20 unperforated NS 35/7,5 DIN rails without end holes with a length of 1750 mm, the following must be specified:

Quantity	Order No.	Length in mm
20		1750

L = length
 A = hole diameter [mm]
 B = distance between end and hole center [mm]
 C = length of elongated hole [mm]
 The following dimensions are possible:
 Round hole: C = 0
 Elongated hole: C = 10, 15, 20 or 25 mm

Component mounting

Marking for terminal strips

- The KLM terminal strip markers are specially developed for the CLIPFIX end brackets
- Infinite height adjustment of the marking area is possible, thanks to the fine pitching
- The KLM 3-L is suitable for multi-level terminal blocks and can be cut in two specific places

For CLIPFIX end brackets, can be marked with snap-on label

For CLIPFIX end brackets, can be marked with label

Component mounting

Cover profiles

- Covering hoods and profiles provide protection against unauthorized actuation of terminal strips
- All covering hoods are closed on all sides
- Specially adjusted contours enable a tight fit to the respective terminal block types, e.g., the UTME test disconnect terminal blocks

Covering hood, can be sealed

Cover profile

Notes:
 1) Please state the length required in cm when ordering.
 Accuracy 1 mm.

Branch terminals

- A branch of flat copper busbars often has to be produced in switch systems
- This can be done easily with the branch terminal because the terminal can be attached and firmly clamped anywhere on a copper rail (up to max. 5 mm thick) later on

35 (35) mm², 125 A, branch terminal

Busbars

L/N/PE connection terminal blocks

- In electrical systems subject to the setup requirements of DIN VDE 0100 or IEC 60204-1 / EN 60204-1 / VDE 0113-1, N, PE or phase conductor L are often connected to central busbars. This requires the conductor and/or terminal block to be clearly marked for the corresponding circuit. The connection terminal blocks satisfy these requirements:
- Thanks to the individual marking of each terminal block
- By their blue, green-yellow or black colored housings
- Large-surface marking possible with ZB, UC-TM, UCT-TM

Connection terminal blocks and control cabinet sockets

Europe connectors

- The Europe connectors for conductors with a cross section of up to 16 mm² feature wire protection
- Particularly suitable for finely stranded conductors, including those without ferrules
- Insulating housing made from halogen-free polyamide
- High-quality metal parts with corrosion-resistant surfaces
- Secure fixing in housing

Notes:

Connection terminal blocks and control cabinet sockets

Europe connectors

- These Europe connectors are suitable for rigid and flexible conductors with a max. cross section of 25 mm²
- The prismatic clamping part facilitates conductor entry and secure contact can be established even in the case of conductors without ferrules
- Individual positions can be separated through a simple rotary motion, due to the polypropylene insulating housing
- The high-quality metal parts, which feature corrosion-resistant surfaces, are fixed securely in the housing

Junction box connectors

- Thanks to their Push-in connection technology, the three junction box connectors available from Phoenix Contact enable tool-free wiring in a restricted space
- Rigid solid conductors with a cross section range of 0.5 mm² to 2.5 mm² can be connected
- Rigid multi-stranded conductors (7 litz wires) with a cross section range of 1.5 mm² to 2.5 mm² can be safely connected
- Different cross sections are wired together in a junction box connector
- The transparent housing makes it easier to carry out a visual inspection of the terminal points, thereby increasing the safety of the wiring
- Integrated test openings enable the use of test devices once wiring has been completed

Control cabinet sockets

Individual socket, Germany,
Push-in connection

Sockets that can be mounted on DIN rails serve for easy connection of electrical auxiliary devices for assembly, testing, lighting, etc. They enable worldwide use in switchgear, control cabinets, and in simple sub-distributions. Worldwide use makes it essential to offer the sockets with pin connector patterns that are standard in each country, in accordance with the currently applicable standards and regulations. The mounting holes in the sockets mean that, in addition to mounting on a DIN rail in accordance with EN 60715, there is also the option of direct mounting in the service interface. The EO sockets are offered with both the proven screw connection, as well as the modern Push-in connection. The integrated functions such as LED, fuse, switch, circuit breaker or a combination of the functions with each other, offers a wide area of use.

Country-specific requirements for child-proofing are satisfied by the use of shutter systems. L1, N, and PE are arranged on one side of the socket in line with connections. The sockets are available as an individual or double version. The following pin connector patterns can be selected from the sockets:

- Type AB, type CF, type D, type E, type G, type I, type J, type K, type L, and type N
- Type E, type G, and type L are also supplied with an integrated shutter system
- The USA versions are offered with integrated circuit breaker in 15 A and 20 A
- Housing color: gray or green

With the VS-SI-xx / SI-xx mounting frame, the sockets can be used in various IP protection classes. For further information, visit phoenixcontact.net/products

Control cabinet sockets

To prevent unintentional contact with live components, the type E, G, and L sockets have integrated touch protection (child-proofing). This is enshrined in the respective country standards, such as NF C61-314.

Control cabinet sockets

The socket can be operated independently of the control cabinet circuit. In the event of an error, this enables the use of current-operated external measurement devices, that are called upon for fault analysis. An LED display advises of the voltage connected to the socket.

SK ... shield connection clamps

The screw-type shield connection clamps in the SK series are characterized by:

- Simple handling
- Knurled screw
- Spring-loaded, large pressure piece
- Suitable for direct and busbar mounting

Notes:

Dimensional drawings can be found on page 577.

SKS ... shield connection clamps

- The SKS ... spring-type shield connection clamps are available for cable and conductor diameters of between 3 and 20 mm
- Three different forms of mounting are possible: on NS 35 DIN rails, on busbars or directly on conductive mounting plates

Notes:
Dimensional drawings can be found on page 577.

CGS cable guiding system

The cable guiding system makes it particularly easy and safe to install your conductors, cables, and cable harnesses for the control cabinet door or swivel mounting frame.

- Subsequent wiring can be performed quickly and easily via the rotating blisters which can be operated without tools
- Cable routing for the control cabinet door can be planned with the CAD system using the defined installation space and swivel range
- Quick and easy mounting, thanks to integrated flanges with strain relief
- Mechanical cable protection and bundling, thanks to covering hoods that can be attached without tools
- Secure with M5 tapping screws

- Installed conductors are securely held in place by means of wire retaining clips that can be snapped onto bars on the side
- The wide, diagonal heads of the cable duct bars make it easy to fit the cover and hold it securely in place

- Predetermined breaking point enables tool-free, burr-free removal of bars
- The CUTFOX-CD cable duct cutter for easy cutting with minimum effort and no burrs

- Plastic body-bound rivets enable easy fixing of cable ducts using the rivet setting tool

- Thanks to its powerful leverage and special blade geometry, the PPS CD cable duct cutter allows easy cutting with minimum effort and no burrs

Cable duct cutters

- The CUTFOX CD is a manual tool, that can be used in a mobile way, for the best unrestricted cutting performance
- The cable duct cutter enables burr and chip-free cutting to length of plastic profiles such as wiring channels and their covers
- Special cutting geometries ensure a clean cut and long lifetimes
- The PPS CD M, as a stationary tool, is ideal for convenient application over long periods of time

Cable clamps and DIN rail

- The cable clamps provide strain relief
- Individual or bundled cables with a diameter of up to 64 mm can be safely and easily installed
- The halogen-free plastic troughs have been designed to be perfectly secure while at the same time protecting the conductors

Cable clamps for a cable diameter of 6 - 64 mm

Cable routing, cable protection, cable bundling

Protective hoses made of plastic

The plastic protective hoses offer optimum protection, thanks to the following properties:

- Airtight and liquid tight
- Oil-resistant up to +80°C
- Gasoline-resistant
- Largely resistant to acids and solvents
- Free from silicone, halogen, and cadmium
- UV resistant

The V0 version offers additional protection, thanks to its self-extinguishing property. This makes it suitable for use in the following areas:

- Machine and system engineering
- Vehicle construction
- Rail vehicles
- Shipbuilding
- Automation
- Electrical systems

The transition and end sleeves offer an alternative form of termination to the actual cable gland.

- Can be used wherever it is not possible or necessary to attach a cable gland
- Prevent damage to the conductors being fed through

Notes:
Pcs./Pkt. indicates the protective hose length in [m].

Slotted, outside diameter of 21.2 - 42.5 mm

Cable routing, cable protection, cable bundling

Screw connections for plastic protective hoses

The plastic screw connections with straight design are available in IP66 and IP69K protection classes. They offer the following features:

- Vibration-resistant, automatic protective hose latching
- Pg or metric thread
- Resistant to oil and gasoline
- Resistant to acids and solvents
- Free from silicone, halogen, and cadmium

Tool-free protective hose mounting

- Secure, reliable, and easy latching in the hose screw connection, see figure below

Notes:

For accessories and dimensional drawings, see phoenixcontact.net/products

To ensure the IP69K degree of protection between the hose screw connection and screw connection housing, sealant must be applied to the threading. LOCTITE® 5331™ is a suitable thread sealant for this.

IP66 degree of protection, Pg7 - Pg36 thread

Protective hoses with PVC- or PU-coated spirals

The **WP-SPIRAL PVC C ...** plastic protective hoses with soft PVC-coated spring wire helix offer optimum protection, thanks to the following properties:

- Highly flexible
- Can be stretched and compressed
- Internal corrosion protection
- Largely resistant to acids and solvents
- Free from silicone and cadmium
- Airtight and liquid tight

The **WP-SPIRAL PU C ...** plastic protective hoses with fixed, PU-coated spring wire helix offer the following:

- Very tough and resistant to abrasion
- Highly flexible
- Resistant to germs
- Airtight and liquid tight
- Resistant to oil and grease
- Gasoline-resistant
- Largely resistant to acids and solvents
- Free from silicone, halogen, and cadmium
- Flame-protected
- Excellent behavior at low temperatures
- V2 in accordance with UL 94
- Suitable as a suction tube

The coated protective hoses are particularly suitable for the following fields of application:

- Machine and system engineering
- Vehicle construction
- Use in guide chains
- Shipbuilding
- Automation
- Electrical systems

Notes:

Pcs./Pkt. indicates the protective hose length in [m].

Cable routing, cable protection, cable bundling

Screw connections, for protective hoses with coated spirals

The polypropylene screw connections with a straight design are available with or without a rotatable connecting thread.

- Easy, tool-free mounting
- High resistance to dust and fluids
- Vibration resistance and high tensile strength, thanks to hose screw-out locking

Rotatable screw connections

- The protective hose can still be rotated after panel mounting, thanks to the special screw connections

IP65 degree of protection,

Protective hoses made of steel or stainless steel

The metal protective hoses made of galvanized steel or stainless steel offer optimum protection and have a wide range of uses, thanks to the following properties:

- Interlocked, helix-wound profile
- Highly flexible
- High tensile strength and resistance to lateral pressure

These properties make the products suitable for use in the following areas:

- Machine and system engineering
- Vehicle construction
- Ex area in accordance with EN 60079-14 and EN 61241-14
- Shipbuilding
- Rail vehicles
- Automation
- Electrical systems

Notes:
Pcs./Pkt. indicates the protective hose length in [m].

Cable routing, cable protection, cable bundling

Screw connections, for protective hoses made of steel or stainless steel

The screw connections are available with or without a rotatable connecting thread. They have the following properties:

- Easy mounting of protective hose without tools
- Vibration resistance and high tensile strength, thanks to hose screw-out locking
- Integrated inner sleeve and rotation lock for hose

Rotatable screw connections

- The protective hose can still be rotated after panel mounting, thanks to the special screw connections

Notes:

Inner sleeves and seals are supplied as standard.

IP40 degree of protection, Pg7 - Pg36 thread

Spiral hoses

Easy bundling and routing of cables and conductors

- Fast and easy to use
- Can be retrofitted
- The spiral structure means that individual conductors and cables can be led out at any point
- Offer protection under light mechanical strain

Notes:

Pcs./Pkt. indicates the spiral hose length in [m].

Spiral hose,
for bundle diameters of 2 mm - 150 mm

Accessories for protective hose mounting

The WP-BASE C ... protective hose holders with cover are attached using a screw.

- An integrated rib fastening also helps to relieve the strain on the protective hose
- The base of the holder is designed so that it can even be pushed onto a C DIN rail
- The engagement pins enable hose holders of different sizes to be arranged alongside each other

WP-BASE HF ... protective hose clips:

- Galvanized steel locking latch with rubber profile
- Mounting with a screw

WP-BASE ... fixing bracket:

- With two mounting holes in accordance with DIN 46320
- Protective hose feed-through can be attached to the side of the panel
- Pg or metric protective hose screw connections can be mounted on a bracket

Accessories for protective hose mounting

Flat gasket made from Perbunan

WP-FS ...

The Perbunan flat sealing rings are used to seal protective hose screw connections on uneven surfaces. They are inserted between the hose screw connection and the surface, thereby achieving degrees of protection up to IP68.

WP-FS HF

The Centellen flat sealing rings also provide an optimum seal on uneven surfaces. As well as having IP68 protection and high mechanical stability, the sealing rings are also UV resistant and halogen-free. This enables them to be used outdoors. Properties:

- Resistant to oil, seal against dust and water; UV resistant, halogen-free, high mechanical stability

WP-OR ...

Thanks to properties such as resistance to oil and sealing against water and dust, the Perbunan O-rings can be used in a wide range of applications.

Installation and mounting material – CABINET add-on

Cable routing, cable protection, cable bundling

Plastic cable markers for insert labels, for assembly with cable ties

- Plastic cable markers mark and bundle conductors and cables indoors
- The sealing cap protects the marked insert label from contamination
- Marking service: Phoenix Contact can custom-mark many insert labels for plastic cable markers according to your requirements
- **Designation example:**
ESL (29x8)
 Lettering field width: 29 mm
 Lettering field height: 8 mm
 Type of packaging: sheet

Notes:	
For corresponding cable ties, see from page 614.	
The print image may vary depending on the laser printer.	

For insert labels with lettering field size 29 x 8 mm, for cable diameters > 10 mm

Cable routing, cable protection, cable bundling

Plastic cable markers for insert labels, for assembly with cable ties

- KMK HP ... plastic cable markers mark and bundle conductors and cables indoors
- Flammability rating V0 in accordance with UL 94
- The KMK HP ... cable markers are particularly suitable for use in the railway industry, transportation technology, and building technology, thanks to their outstanding material properties
- The KMK ... versions have eyelets and are attached with cable ties
- The sealing cap protects the marked insert label from contamination
- Marking service: Phoenix Contact can custom-mark many insert labels for plastic cable markers according to your requirements
- The UCT sheets can also be used with the THERMOMARK CARD-UCT-MAG26 magazine in THERMOMARK CARD ...
- **Designation example:**
UCT-EMP (25x6)
Lettering field width: 25 mm
Lettering field height: 6 mm
Type of packaging: sheet

Notes:

For matching cable ties, see page 588 onwards or the product area on our website at phoenixcontact.net/products.

Lettering field size: 25 x 6 mm,
for cable diameter > 6 mm

Cable routing, cable protection, cable bundling

Plastic cable markers for insert labels, for assembly with cable ties

- KMK UV ... plastic cable markers mark and bundle conductors and cables outdoors
- The KMK UV ... cable markers are transparent, impact resistant, and have excellent weathering resistance. At the same time, they also possess outstanding chemical resistance
- The KMK ... versions have eyelets and are attached with cable ties
- The sealing cap protects the marked insert label from contamination
- Marking service: Phoenix Contact can custom-mark many insert labels for plastic cable markers according to your requirements
- The UCT sheets can also be used with the THERMOMARK CARD-UCT-MAG26 magazine in THERMOMARK CARD ...
- The UniSheets can also be used with the THERMOMARK CARD-US-MAG1 magazine in THERMOMARK CARD ...
- **Designation example:**
UCT-EMP (25x6)
Lettering field width: 25 mm
Lettering field height: 6 mm
Type of packaging: roll

Notes:
For matching cable ties, see page 588 onwards or the product area on our website at phoenixcontact.net/products.
1) WT-UV HF...BK cable ties are weatherproof and UV resistant in accordance with ISO 4892 (after QUV-B 600 hours) for up to 10 years.

Plastic cable ties

- For bundling and fastening conductors and cables
- Can be used indoors and outdoors even under unfavorable industrial conditions
- With the UNIFOX-CT ... cable tie tool, the cable ties are easily tightened and cut off flush in one step
- Cable ties are easy to use, thanks to their optimized geometries
- Optimum head shape for high tensile forces
- Temperature range: briefly up to 110°C
- Comprehensive approvals
- **Designation example:**

Installation and mounting material – CABINET add-on

Cable routing, cable protection, cable bundling

Cable ties for outdoor use

- Halogen-free/silicone-free
- Constantly high temperature resistance up to 105°C

The WT-UV HF ... cable ties are specially designed for outdoor use and offer the following features:

- Weatherproof and UV resistant in accordance with ISO 4892 (QUV-B 600 hours) for up to ten years
- Cable ties are easy to use, thanks to their optimum geometries
- Optimum head shape for high tensile forces

Cable tie length of 98 ... 365 mm

General data	
Material	PA 6.6
Components	Free from silicone and halogen
Flammability rating in accordance with UL 94	V2
Temperature range	-40 ... 105 [°C]

Cable ties with V0 flammability rating in accordance with UL 94

Thanks to their UL 94 V0 flammability rating and absence of halogen, the WT-HP HF ... cable ties are particularly suitable for use in the rail industry.

- **Designation example:**

WT-HP HF 3,6x140

Cable tie width: 3.6 mm

Cable tie length: 140 mm

Cable ties for use at high temperatures

The WT-HT HF ... cable ties are specially designed for high-temperature applications and offer the following features:

- Constantly high temperature resistance up to 125°C and briefly up to 145°C
- Cable ties are easy to use, thanks to their optimum geometries
- Black cable ties are UV stabilized
- Special head shape for high tensile forces
- Halogen-free/silicone-free
- **Designation example:**

Cable ties made of stainless steel AISI 304 (V2A)

The WT-STEEL S ... cable ties are especially suited to use outdoors and in the chemical industry. They offer the following features:

- Secure, permanent attachment with long service life
- Corrosion resistant
- Chemical resistance
- UV resistant
- Weatherproof
- Fire-proof
- Vibration-resistant
- Easy to use and self-locking
- Anti-magnetic
- Halogen-free/silicone-free

Ex stainless steel empty enclosures

The stainless steel Ex enclosure product range provides comprehensive protection for your applications in industrial environments and in process technology. The product range consists of standardized enclosures in sizes up to 1000 mm x 1000 mm x 300 mm. On request, we can expand the enclosures into ATEX- and IECEx-approved junction boxes.

Ex polyester empty enclosures

The comprehensive range of polyester Ex enclosures provides comprehensive protection for your applications in Ex areas. On request, we can expand the enclosures into ATEX- and IECEx-approved junction boxes.

Polyester empty enclosures

The extensive standard polyester enclosure range provides robust standard enclosures for industrial environments as well as for non-potentially explosive areas in the process industry. The enclosures are expanded in line with your requirements into junction boxes and control boxes.

Empty enclosures

Select the ideal enclosure for your application. Custom dimensions and surface treatments are available on request. For applications in the Ex area, the enclosures are supplied with corresponding component approval in accordance with ATEX or IECEx.

Empty enclosures customized according to customer specifications

We can customize the enclosures according to your specifications with threads, bore holes, and rectangular cutouts. The Ex standards in accordance with ATEX and IECEx are taken into consideration. The enclosures are supplied with corresponding component approval.

Junction boxes assembled according to customer specifications

If desired, you can obtain the CLIPSAFE empty enclosure completely equipped with components and cable glands. For use in potentially explosive areas, the junction boxes are supplied with corresponding equipment approval in accordance with ATEX and IECEx.

Customer-specific solutions

To obtain a quick quote for your customized junction box and enclosure solution, please fill out the request form on the website. You can easily describe your requirements using the form. We will then prepare an individual quote based on the information provided. Just enter the web code into the search field on our website.

Installation and mounting material – CABINET add-on

Ex stainless steel empty enclosures

Empty enclosure, depth of 80 - 120 mm

- Defined stops and the special design of the seal support ensure optimum seal compression. They thereby satisfy the high requirements in terms of sealing for the housing
- As of 160 mm depth (C), four housing sides can be assembled with flange plates
- The stainless steel marking label supplied as standard is fitted on the outside away from the seal area in the bore holes provided
- The patented protective seal frame protects the flange plate seal against external influences
- Additional ground bolts are attached to the door and housing for easy door stop replacement
- The housing has a large mounting opening for convenient assembly of the terminal boxes. The flat seal edge protects against injury during installation and when carrying out maintenance and servicing

Depth of 80 mm and 100 mm, housing with cover screwed in place, without flange, without mounting plate

#0851

Notes:

Detailed installation and assembly instructions for use in Ex areas: see installation instructions and the download area for the item at www.phoenixcontact.net/products.

Torque values for all mounting screws are documented in the installation instructions supplied as standard and in the product area of the website at www.phoenixcontact.net/products.

In the case of sides with a length of ≥ 600 mm, the material thickness increases to 2 mm.

1) Matching stainless steel labels: EMP-V4A Lid-S - 0839005 and EMP-V4A Lid-S CUS - 0839006.

Installation and mounting material – CABINET add-on

Ex stainless steel empty enclosures

Empty enclosure, depth of 160 mm

- Defined stops and the special design of the seal support ensure optimum seal compression. They thereby satisfy the high requirements in terms of sealing for the housing
- As of 160 mm depth (C), four housing sides can be assembled with flange plates
- The stainless steel marking label supplied as standard is fitted on the outside away from the seal area in the bore holes provided
- The patented protective seal frame protects the flange plate seal against external influences
- Additional ground bolts are attached to the door and housing for easy door stop replacement
- The housing has a large mounting opening for convenient assembly of the terminal boxes. The flat seal edge protects against injury during installation and when carrying out maintenance and servicing

Ex polyester empty enclosures

Empty enclosure with door

Junction box

- Easy door mounting, with spring-mounted hinge pins, means the door can be removed without tools
- Mounting brackets with turning protection can be flexibly adapted to the installation situation
- Comprehensive, optional accessories for customer-specific terminal boxes: grounding bolts, various locking systems in the shape of triangle bit, square bit, double bit, and T-handle can be supplied

Terminal box marking

An extensive range of marking materials is available for the durable and unique marking of terminal boxes; see “Equipment marking” section

Note: for customer-specific Ex terminal boxes, use the request form on the website, and specify web code:

Quality in quantity

Integrated management system

The objective of the Phoenix Contact integrated management system is to integrate all requirements pertaining to products, processes, and the organization.

Statutory and regulatory requirements, as well as those of international standards and our customers, are met and, in some cases, even exceeded in all phases of the product lifecycle.

The Phoenix Contact management system is monitored by internationally recognized independent bodies each year to ensure that quality, environmental protection, energy efficiency, and occupational safety have been integrated in conformance with the relevant requirements. Certification in accordance with international standards ISO 9001, ISO 14001, ISO 50001, and BS OHSAS 18001 is the result of our corporate philosophy of meeting the needs of our customers, staff, and environment as best as possible. This serves as the basis for innovative products with the familiar high Phoenix Contact quality standard, actively practiced environmental protection through efficient production and products that conserve resources, and responsibility in the field of occupational health and safety. It goes without saying that we integrate all further requirements of standards, international approvals or special customer requirements into our company processes.

The result of this system is a building block for the success of the Phoenix Contact Group as well as its products and services.

CE marking

CE marking was introduced as an important instrument for the free movement of goods and services within the single European market. By applying the mark to a product, the manufacturer confirms its compliance with all EU directives applicable to this product. The EU directives describe the product characteristics with regard to device safety and the avoidance of risks. They have been incorporated in national legislation. Compliance with the requirements is a **condition for placing the product on the market within the EU.**

Where applicable, our products currently fall within the scope of the following directives in particular:

- 2014/35/EU
Electrical equipment designed for use within certain voltage limits (Low Voltage Directive)
- 2014/30/EU
Electromagnetic compatibility (EMC Directive)
- 2014/32/EU
Measuring instruments
- 2006/42/EC
Safety of machinery (Machinery Directive)
- 2014/34/EU
Equipment and protective systems intended for use in potentially explosive atmospheres (ATEX Directive)
- 2014/53/EU
Radio equipment (RED)
- 2011/65/EU
Restriction of the use of certain hazardous substances (RoHS Directive)
- 2012/19/EU
Waste electrical and electronic equipment (WEEE Directive)

The standards used as the basis for the aforementioned directives have been at the heart of our development standard for some time as a way of ensuring compliance with European directives. The numbers of the directives indicate their version at the time of publication. In the event of changes to directives and/or standards, our products will undergo conformity assessment again in good time and a new declaration of conformity will be issued promptly. The current declarations for each product can also be found in our download area.

Among the aforementioned European directives, the EMC Directive plays a particularly important role. It uses a directive enshrined in national legislation as the basis for defining electromagnetic compatibility as a fundamental device property. European legislation therefore places great emphasis on the electromagnetic compatibility of devices and systems as a basic prerequisite for the error-free operation of machines and systems. As an international leader in the field of surge protection, Phoenix Contact has extensive expertise in EMC. This expertise and the experience gained over many years in the development and application of industrial interface and communication technology have resulted in an extremely high standard of quality for our products when it comes to electromagnetic compatibility. Our independent laboratory, Phoenix Testlab, was founded in order to share this expertise with other companies. Phoenix Testlab GmbH is an accredited service company, which carries out EMC testing in compliance with European standards. At Phoenix Testlab,

devices are also tested with regard to their electrical safety, mechanical influences, and their behavior in relation to environmental influences. Phoenix Testlab is also a notified body in accordance with EMC Directive 2014/30/EU and Radio Equipment Directive (RED) 2014/53/EU. As a certification body (TCB, FCB, and RCB), Phoenix Testlab is also able to approve these products for the markets in the USA, Canada, and Japan.

Standards and regulations

All relevant standards and regulations are used as the basis for the development and maintenance of our products.

International standards are subject to continuous changes as a result of harmonization and new developments. In line with this process, the current version of all standards that are relevant to our products is documented in the product area on our website at phoenixcontact.net/products.

Online product information service on the world wide web

Phoenix Contact is continuously extending its product range.

Within the scope of our product monitoring obligation, all products are subject to an improvement process.

The Internet is an ideal platform to quickly communicate new product developments and improvements to the market.

You can quickly access the relevant Phoenix Contact website for your region via phoenixcontact.com. There you will always find an up-to-date overview of products, solutions, and services from Phoenix Contact. This includes technical documents such as data sheets and user manuals, current driver and demo software, and a direct link to the relevant contact person.

Materials

Polyamide (PA)

Polyamide has excellent electrical, mechanical, chemical, and thermal properties, even at high operating temperatures. Brief peak temperatures of up to 200°C are permitted as a result of heat aging stabilization. Polyamide absorbs moisture from its surroundings (2.8% on average). However, this moisture is not crystallization water in the plastic itself, but chemically bonded H₂O groups in the molecular structure. This makes the plastic flexible and resistant to breakage, even at temperatures as low as -60°C. As per UL 94, PA has a flammability rating of V2 to V0. The polyamide used by Phoenix Contact is silicone and halogen-free and is suitable for use at temperatures between -60°C and +125°C.

Polycarbonate (PC)

Polycarbonate is characterized by its high mechanical strength and chemical resistance. Other properties of this material include rigidity, dimensional stability, and good heat distortion resistance. Polycarbonate is used to manufacture particularly smooth and stable marking materials. The polycarbonate used by Phoenix Contact absorbs little moisture, is silicone and halogen-free, and is suitable for use at temperatures between -40°C and +125°C.

Polycarbonate/acrylonitrile butadiene styrene (PC/ABS)

PC/ABS blends are amorphous thermoplastics which are characterized by high impact strength potential even at low temperatures. They are resistant to acids and lyes, for example. In addition to benefiting from high dimensional accuracy and low distortion tendency, they absorb little moisture. The products manufactured from these blends have a high-gloss finish. Temperature range: -50°C to +90°C.

Acrylonitrile butadiene styrene (ABS)

ABS is a copolymer. It has a high impact strength and is strong and hard. The ABS used by Phoenix Contact is silicone-free and is suitable for use at temperatures between -40°C and +85°C.

Polyvinyl chloride (PVC)

PVC has a long service life. It is characterized in particular by its outstanding mechanical strength and high chemical resistance. PVC is unaffected by oxygen and ozone. The material is resistant to corrosive salt solutions and most acids. The polyvinyl chloride used by Phoenix Contact is silicone-free and

is suitable for use at temperatures between -30°C and +80°C.

Polyester

Polyester is resistant to chemicals. It is ideally suited to printing, shaping, and punching. Polyester is resistant to UV radiation and absorbs little moisture. The polyester used by Phoenix Contact is silicone and halogen-free. Depending on its composition, it is suitable for use at temperatures between -40°C and +150°C.

Polyolefin

Polyolefins are semi-crystalline thermoplastics, which can be easily processed as extrusion profiles (shrink sleeves). They are characterized by good chemical resistance. Silicone-free, temperature range: -55°C to +125°C.

Polyethylene (PE)

Polyethylene is a thermoplastic material which is highly resistant to acids, lyes, and other solvents. PE absorbs hardly any moisture and has high durability and breaking elongation. Silicone and halogen-free, temperature range: -40°C to +80°C.

Halogen-free

The term halogen-free, based on international standards for base materials for PCBs (e.g., IEC 61249-2-21, IPC 4101 C), relates to the elements chlorine and bromine in flame protection agents. This also forbids the use of flame protection agents containing halogen in accordance with DIN EN ISO 1043-4.

As per the definition in the ZVEI position paper (requirements for the use of halogen-free products in the electrical and electronics industry), this means that no flame protection agents containing halogen or PVC are present in the components.

Flammability classification

UL 94 V0/1/2

The flammability tests for plastics have been defined by Underwriters Laboratories (USA) in regulation UL 94. This applies to all areas of application, particularly in electrical engineering. A horizontal (HB - Horizontal Burn) or vertical (VB - Vertical Burn) test is carried out at the test laboratory to determine the flammability of the plastic material with a naked flame. In order of increasing flame-retardant behavior, the evaluation classes are HB, V1, V2, and V0. Test results are recorded on “yellow cards” and are published annually in the Recognized Component Directory.

The flash point, the combustion point, and the ignition point of a material are decisive with regard to its fire behavior. The tests show that the UL 94 V1/2/0 classifications are stricter than that of UL 94 HB.

The test bar is clamped vertically and flame-treated several times for 10 seconds at a time. Between the flame treatments, the time until the test bar is extinguished is measured. The afterflame times and the drip behavior are then evaluated.

This test setup is not suitable for foils and/or very thin test objects that shrink when exposed to the heat of the flame.

Phoenix Contact only uses plastics which conform to UL 94 V1/2/0.

Classification	UL 94 V0	UL 94 V1	UL 94 V2	UL 94 HB
Burning time after each flame treatment	≤ 10 s	≤ 30 s	≤ 30 s	-
Total burning time after 10 flame treatments	≤ 50 s	≤ 250 s	≤ 250 s	-
Glowing time after the 2nd flame treatment	≤ 30 s	≤ 60 s	≤ 60 s	-
Complete burn-off	No	No	No	Yes
Ignition of the absorbent cotton under the sample	No	No	No	-

Halogen-free flame protection

DIN EN ISO 1043-4

Halogens include the chemical elements astatine, fluorine, chlorine, bromine, and iodine. One property of the halogen compounds of bromine and chlorine is the reduction in the degree of flammability when used in plastics. In the event of fire, poisonous corrosive gases are formed. Secondary damage attributable in part to the water used to extinguish the fire can also be caused. For this reason, Phoenix Contact does not use any flame protection systems which contain halogens or other additives. Polyamide,

polycarbonate, polycarbonate/acrylonitrile butadiene styrene, acrylonitrile butadiene styrene, and polyolefins feature halogen-free flame protection systems.

Industrial identification – Quality features

Marking materials and their markings must withstand a wide range of extreme environmental conditions, depending on their area of application. To ensure clear and permanent marking, the properties of the base material must not alter too drastically and the quality of the printing must remain constant. In addition to environmental influences, marking materials and their markings are often subjected to mechanical influences.

It must not be possible to scratch the marking off, and abrasions caused by industrial cleaning agents must not render the marking illegible. Furthermore, the marking materials must remain securely fixed in place even when subjected to vibration. Phoenix Contact only uses tested materials that satisfy the requirements set by these standards in every respect.

Weathering resistance

DIN EN ISO 4892-2

To simulate several years of use outdoors, the marking materials are exposed to cyclical stresses through UV radiation and humidity.

In this way, artificial weathering provides an insight into the mechanical properties and the appearance of a material.

Resistance to oil and chemicals

DIN EN ISO 175

Liquid oils and chemicals can trigger physical or chemical reactions that have a negative impact on the base material. Both the mechanical properties of a plastic and the durability of the marking can be affected. Tested materials withstand these influences.

Wipe resistance

DIN EN ISO 61010-1-2 and DIN EN ISO 62208

To ensure the wipe resistance of markings in an industrial environment, the markings undergo a test with isopropanol, n-hexane, and petroleum ether. A cloth is soaked in the respective chemical and wiped over the marking material with a defined force for 30 s. After the test, the marking has to be clearly legible.

Corrosion resistance

DIN 50018

To test the resistance of the materials to corrosion damage, they are exposed to a condensation changing climate with a sulfur dioxide laden atmosphere at +40°C. This climate forms an acidic atmosphere during the test. Finally, a microscopic visual inspection of the materials is performed. All marking materials used by Phoenix Contact conform to this demanding standard and are resistant to aggressive substances.

Salt spray

IEC 60068-2-11/-52

Particularly in shipbuilding and offshore applications, the markings must withstand corrosive atmospheres containing salt. To ensure this can be achieved, the resistance of the materials is tested with salt spray in a corrosive atmosphere. A visual inspection is performed after the test.

Vibration resistance

DIN EN 50155

To simulate vibration stress that occurs in practice (e.g., in the railway industry), the marking materials are exposed to increasing and decreasing frequencies and amplitudes. They are tested in the three axes (x, y, z) for five hours each, and must not be damaged and their secure positioning must not have been impacted.

Scratch resistance

DIN EN ISO 1518

The scratch resistance of markings when exposed to intermittent or linear stress is tested using an Erichsen test pencil. A defined force is applied to an engraving needle via spring tension. The spring tension at which the Erichsen hardness test pencil leaves behind a barely visible trace is decisive.

Adhesion

DIN EN ISO 2409

To test the adhesion of printing, for the Tesa test, a transparent strip of self-adhesive tape with an adhesive strength of 10 ± 1 N is applied to the printing to be tested. The self-adhesive tape is then pulled off at an angle of 60° in relation to the pulling direction. There should be no marks from the printing on the adhesive tape after the test.

Adhesive strength

FINAT 1, 2, and 9

To determine the adhesive strength of a label on a base material, a strip of labels (25 mm x 175 mm) is applied with a defined force. The test sample is then removed after a defined wait time, at a predefined angle, at 300 mm/min. The adhesive strength is specified in N/25 mm.

IP degree of protection

DIN EN 60529 / ISO 20653

Differing ambient conditions and requirements necessitate a clear classification of markings in IP degrees of protection. These are indicated by a code consisting of two numbers following the IP abbreviation: the first number describes the scope of protection against the ingress of foreign bodies, the second the tightness of seal against humidity.

Conductors and cables

Conductors, cables, and lines all serve the same purpose: to carry electrical signals or energy. In everyday conversation, cables are often equated to lines, as both versions generally consist of several conductors that are isolated from each other. Cables have increased mechanical resistance. This enables them to be used in the ground, underwater or even unprotected outside.

The conductor (also referred to as a wire) consists of a conductive copper or aluminum core surrounded by insulation. Copper is preferred, due to its excellent electrotechnical properties. IEC/DIN EN 60228 (VDE 0295) subdivides conductors into 4 classes of flexibility. They are classed according to the basic flexibility of the conductor. The criteria for this are the individual wire diameters and the number of individual wires.

Another factor that influences the inherent stability is the twist pitch. The twist pitch refers to the length of an individual wire that is required for a 360° rotation. The lower the twist pitch, the more rigid and compact the conductor is, and this also increases the outside diameter. In standard IEC/DIN EN 60228 (VDE 0295), the conductor cross sections are defined by the electric conductance or resistance values. These values are the basis for determining the maximum current carrying capacity. Geometrical data, in particular cross section tolerances, is not specified here. As a result, the actual cross section can deviate substantially from the nominal cross sections.

These days, copper exhibits a purity of up to 99.99%. By using copper, the manufacturer is in a position to replace the actual copper cross section with one of more than 10% less. This presents a challenge when it comes to crimping. Insulation permanently isolates the individual conductors from each other. Furthermore, it also acts as a protective sleeve against external influences. The basic requirement for the insulation material is to achieve the maximum possible electrical resistance; however, the corresponding resulting warmth can detract from this.

Today, the choice of insulation is above all plastic, in all its versions. The type and properties of the plastic determine later possible applications for conductors, cables, and lines. Another criterion is the strength of the insulation. This directly influences the mechanical and electrical loading capacity. The condition of the insulation (hardness, durability, thickness, etc.) is furthermore decisive when choosing the right stripping tool.

Ferrules

The ferrule is a useful tool in conductor assembly and wiring. Using sleeves prevents potential splicing of the individual litz wires. This enables effective, and above all, reliable processing. In DIN 46228, the ferrule is defined as being between 0.5 and 50 mm². This standard is divided into four parts:

- Part 1: Tubular end-sleeves without plastic sleeve
- Part 2: Crimp-type end-splices, with and without insulation grip
- Part 3: Conductor-embracing end-splices, without insulation grip
- Part 4: Tubular end-sleeves with plastic sleeve

In addition to the geometric dimensions, the standard also sets out the material, the coloring according to the cross section, and the test specifications. Furthermore, the sleeve must fit class 2, 5, and 6 conductors.

The conductor cross sections are defined using the electrical resistance values and not, as is the case for sleeves, using the geometric dimensions. Greater variations in the cross sections are therefore possible (also refer to the section on conductors and cables). Due to this, there is a certain discrepancy between the sleeve and the conductor. However, Phoenix Contact

crimping tools are largely designed to compensate for this difference in capacity.

In addition to DIN, there is a French standard for ferrules, NFC 63-023. With the exception of the coloring for some cross sections (see matrix), the NFC standard is based on the DIN standard. UL 486 F as well as Canadian standard C22.2 NO. 291-14 are new additions to the normative framework for ferrules.

These harmonized standards are also based on the DIN standard. However, they deal more with test methods and specific requirements (for example, see table for pull-out values).

In UL 486 F, special sleeves such as “TWIN” for two-conductor connection are also recorded for the first time in the standard. For certification in accordance with the aforementioned UL and CSA standards, comprehensive testing must be carried out by the respective organization. It is not just the sleeves that are tested and certified, but the entire system comprising crimping tools and ferrules.

The key advantages of ferrules:

- Increased, long-term operational safety and contact reliability
- Time-saving further processing (particularly in the case of Push-in terminal blocks)
- Reliable connection, even with repeated rewiring
- Reduction in cable breakages
- Easy cross section detection
- Increased vibration resistance
- Permanently low contact resistance
- Individual litz wires are protected (particularly in the case of screw terminal blocks)
- Consistent clamping in the case of screw connections

Note: Now UL-certified

Phoenix Contact was one of the first tool manufacturers to have ferrules in combination with crimping tools and crimping devices certified in accordance with the “new” UL 486 F standard. Together with conformity with DIN 46228 (1-4), this allows us to satisfy global market requirements in the areas of quality, safety, and compatibility.

Cross section [mm ²]	NFC 63-023	German code	DIN 46228-4	UL486-F (E shape)

35.00	Red	Beige	Red	Red
50.00	Blue	Olive	Blue	Blue

Crimping, pressing, crushing

Crimping describes the mechanical joining of the contact and conductor.

In addition to crimping, two further terms are used, based on standards.

The type of deformation plays a decisive role here. Based on the type of contact, a distinction is made between:

- Crushing, for insulated cable lugs
- Pressing, for ferrules, uninsulated cable lugs, and similar closed connectors.

When processing spade connectors, for example, this is called crimping. Please observe the following key points to ensure a reliable connection between the contact and the conductor.

- The conductor must be processed correctly
- The conductor and the contact must be compatible
- The conductor must be positioned correctly in the contact
- The correct crimping tool must be selected
- The conductor and contact are placed in the designated die nest of the pliers

Professional crimping pliers are always equipped with a pressure lock that can be unlocked. It unlocks as soon as the required crimping pressure is applied. This prevents operation with insufficient pressure. This ensures consistent crimping results for the user with maximum possible pull-out values.

Automatic or semi-automatic crimping machines are often used when processing large numbers of contacts. Standards DIN EN 60352-2 and DIN EN 60999-1 are among the references used to subsequently assess crimping results. In addition to a variety of electrical and mechanical tests, conductor pull-out tests are the decisive criterion.

All tools in the CRIMPFOX series from Phoenix Contact are calibrated and tested in accordance with the applicable standards. These tools ensure gas-tight crimping with long-term stability. We recommend checking the crimp quality every 5000 cycles or once per year, using suitable, calibrated test equipment.

Crimp profiles

WM crimp

For crimping ferrules in accordance with DIN 46228-1/4, UL 486F.

B crimp

For crimping uninsulated spade connectors, slip-on sleeves, and other open crimping sleeves.

Hex crimp

For crimping ferrules in accordance with DIN 46228-1/4, UL 486F, uninsulated tubular cable lugs, coaxial connectors, and FO connectors.

Square crimp

For crimping ferrules in accordance with DIN 46228-1/4, UL 486F, uninsulated tubular cable lugs, coaxial connectors, and FO connectors.

Indent/mandrel crimp

For crimping uninsulated cable lugs and connectors.

Four-mandrel crimp

For crimping turned contacts.

Trapezoidal crimp

For crimping ferrules in accordance with DIN 46228-1/4, UL 486F.

Oval crimp

For crimping insulated cable lugs and connectors.

Double indent crimp

For crimping uninsulated cable lugs and connectors.

Connectors

The crimp connections have proven themselves millions of times over in all areas of industry, automotive technology, aviation, the transport industry, and in medical equipment. Connectors are also known as crimp contacts. They are available in a wide range of versions and designs.

They are divided into two main groups: the solid, turned connectors or contacts are referred to as being “closed”, while the punched, rolled connectors or contacts are “open”. In an electrical installation, these crimp connections fall into the category of “solder-free electrical connections”.

The scope of performance as well as test specifications are described in European standard DIN EN 60352-2. “Crimping” is a joining process that permanently connects one or more conductors with a contact. A stripped conductor is inserted into the crimp zone of the contact and connected by means of a defined crimping process. This results in a permanent, reliable connection that cannot be detached.

The following key groups make up the different connector types, with a large range of dimensions and conductor cross sections:

- Punched-rolled contacts
- Turned contacts
- Hard-soldered crimping cable lugs
- Tubular and compression cable lugs
- Butt connectors
- Insulated crimping cable lugs
- Pin cable lugs
- Uninsulated and insulated ring cable lugs
- Uninsulated and insulated fork-type cable lugs
- Uninsulated and insulated slip-on sleeves
- Coaxial CATV connectors

The B crimp profile is mainly used as a crimping profile for punched-rolled contacts. Solid turned connectors or contacts mainly exhibit profiles in four-mandrel crimping (4/8 indent), square, hexagonal, and B crimp.

Mechanical crimping pliers with a ratchet system or hydraulically operated tools with different die sizes and crimp profiles process cross sections larger than 10 mm².

Depending on the machine type, square and four-mandrel profiles up to 10 mm² are installed in electrical, pneumatic, and electropneumatic crimping machines. For larger cross sections, such as for a vehicle connector, the B crimp profile is also used. Other profiles, such as WM crimp, O crimp, indent crimp, and double indent crimp, are used for processing ferrules, tubular and crimped cable lugs, and connectors up to 300 mm².

DIN 46230, DIN 46234, and DIN 46235 are used as a reference for the standard. This time-saving, cost-effective connection method has proved itself millions of times over for many decades. Getting the right design, however, is a very complex task. For standard-compliant crimp connections, the perfect interplay between the following is crucial:

- Litz wire cross section
- Crimp contact
- Crimping tools
- Correct tool settings

Selecting the crimp profile depends on various parameters, such as the connector or crimp contact, the applicable standard, the area of use, and the specific connector type.

Conductor pull-out test

DIN EN 60352-2

Crimping points can be affected by tensile forces during wiring or operation. Therefore, properly crimped ferrules and connectors must offer a high degree of mechanical safety. To test the tensile load capacity, a crimped conductor is exposed to a predefined, cross-sectional tensile force for a period of up to 60 seconds, and it must withstand this load. The tensile force exerts stress on the conductor at the crimping point. Damage must not occur to the crimping point as a result. Generally, even the maximum tensile force is tolerated, until the connection is destroyed.

Conductor cross sections/conductor pull-out forces

Gas tightness

A gas-tight crimp connection is the result of a defined crimping process. The wire strands in one or more conductors and a connector are joined to create a largely homogeneous structure with no gaps. This results in a permanent, reliable connection that cannot be detached.

In addition to the mechanical and electrical properties to be tested, a visual examination of the crimp area provides important information regarding the quality of the connection. To this end, micrographs or images are captured by means of computer tomography. The porosity, elongation at break, and the deformation of the individual wire strands is assessed in this way.

When crimping is performed correctly, it is largely protected from gases such as industrial atmospheres that contain sulfur dioxide and from oxygen, salt spray or other corrosive media. This prevents gases causing corrosion on the individual wire strands during the lifetime of the connection and any resulting deterioration in the electrical properties.

The crimp connections of ferrules differ from connectors or cable lugs. Ferrules are used as splicing protection for class 2, 5, and 6 copper wires that are multi-stranded, fine-stranded, and extra finely stranded. The copper sleeves of ferrules have a material thickness of just 0.15 mm to 0.45 mm. This is significantly thinner than that of cable lugs, for example.

DIN 46228 (Part 1 - 4) describes the mechanical testing and overall dimension check starting from 2.5 mm². Class 5 copper wires in accordance with IEC 60228 are described for the crimping of ferrules. The electrical properties are evaluated in conjunction with the later application, e.g., within a terminal block. Corrosion-free contact areas are a prerequisite for low-resistance and therefore high-performance connections, especially in aggressive environments.

For this reason, the secure positioning of the connection in the terminal point must be ensured.

The impact of aggressive media on the terminal point is evaluated in the terminal block standard for copper wires. The voltage drop in accordance with DIN EN 60947-7-1 must not exceed a value of 3.2 mV before or after the test, nor must it exceed 1.5 times the value measured at the start of the test.

The connection is deemed gas-tight if the test object meets the requirements of a test in a condensation changing climate with an atmosphere that contains sulfur dioxide in accordance with DIN 50018 (AHT 2,0 S).

This test involves storage in a condensation changing climate with changing humidity and temperatures. In the first test section, the test object is exposed to an SO₂ volumetric concentration of 0.67% at a temperature of 40°C and humidity of approximately 100% for 8 hours.

After this test, the test objects are left to dry for 16 hours with the door open. This cycle is performed twice, before the test objects are assessed.

When used correctly at contact points, Phoenix Contact crimping tools, ferrules, and connectors achieve a permanent gas-tight connection. Even aggressive media cannot impact this connection.

1000 V tests in accordance with EN 60900

In the strict safety regulations for working on live parts up to 1000 V AC and 1500 V DC, VDE-insulated tools perform a key role. Of course, general safety measures also apply. International standard IEC 60900 places very stringent requirements on insulated tools.

In addition to specifications regarding the geometry and dimensions, this standard primarily defines the properties of the insulation material. Comprehensive test specifications complete the standard. For example, the condition of the insulation and markings is visually inspected.

An impact test checks the resistance of the insulation layer to impacts. Breakages, flaking or cracks must not occur, even at low temperatures (-25°C or -40°C depending on the category).

Following an indentation test (semi-sphere 5 mm in diameter), a force of 20 N is applied to the insulation for 2 hours at 70°C. After cooling, the test point must not exhibit any electrical disruptive discharge, flashover or sparkover over a period of 3 minutes while a voltage of 5 kV is applied (r.m.s. value).

In dielectric tests, pre-conditioned tools (water bath/storage in humidity cabinet) undergo voltage testing. A voltage of 10 kV is applied for three minutes. The discharge current must be less than 1 mA per 200 mm coating length of the hand tool.

Other tests that are performed assess the adhesive strength of the insulation coating, the markings' resistance to chemicals, and the combustion behavior. If the tool successfully passes type testing, this provides the basis for using the VDE logo in conjunction with IEC 60900.

Regular inspections of production sites and test centers are also made by the appropriate VDE approval body. Among other things, this involves taking random product samples from ongoing production and assessing them. The manufacturer already carries out comprehensive testing during the production stage, ensuring full compliance with the requirements of IEC 60900.

The last hurdle is the test for electric strength. Each tool is tested at 10,000 V AC. Only after passing this test can a tool be referred to as VDE-certified and released for sale.

VDE-insulated tools from Phoenix Contact, which are marketed accordingly, provide the user with a high degree of quality and maximum possible safety when working with live parts up to 1000 V AC and 1500 V DC.

Identification colors

The plastic sleeves of the insulated cable lugs and connectors are different colors depending on the cross section. This makes it easy to reliably differentiate between the conductor cross sections.

Conductor cross sections and their corresponding identification colors are listed in the table.

Conductor cross section		Color
[mm ²]	AWG	
0.1 - 0.5	26 - 20	Yellow/light green Green
0.25 - 0.75	24 - 18	
0.5 - 1.5	20 - 16	Red Blue
1.5 - 2.5	16 - 14	
4 - 6	12 - 10	Yellow Red
10	8	
16	6	Blue Yellow
25	4	

Cutting

Cable processing starts with trimming or cutting the conductor or cable to length.

Conductors and cables in a wide range of sizes, shapes, and insulation can only be processed professionally and permanently using high-quality tools. Optimum leverage means that you only need to apply low manual force to generate maximum force in the cutting area.

When it comes to cutting conductors and cables in the upper cross section range up to 1400 mm², ratchet-driven cable cutters are the solution. Here, the finely stepped down drives also keep the required manual force to a minimum. Both versions, with direct and indirect force transmission, feature special cutting geometries which help to ensure ease of movement and can be relied upon to produce burr-free right-angle cuts. Accidental deformation of the conductor is thereby prevented.

The cutting method described above, which is also known as shear cutting, is listed under the generic term “splitting” in DIN 8588. The two blades move toward

and past one another and cut (shear) the material without burring.

Bite cutting involves two wedge-shaped blades which move toward one another to cut the material. The wedge angle set for the blades is deliberately large and therefore stable. In addition to the hardening of the entire tool, the cutting area is subsequently hardened again inductively. This makes it possible to sever even extremely hard materials such as piano wire and spring steel with a tensile strength of up to 2300 N/mm² without damaging the tool. Bite cutting is suitable only to a limited extent for cutting through cables and lines.

When used appropriately, the CUTFOX cutting tools from Phoenix Contact can be relied upon for long-term stability and permanently consistent results.

Shear cutting

Bite cutting

Stripping

Stripping is the next step in the manufacturing process for creating a reliable crimp connection. In this case, a distinction is made between stripping and removing the sheath.

Stripping is used as a generic term as well as to describe the removal of insulation from conductors up to 16 mm². Removal of the sheath describes the stripping process for large conductor cross sections and multi-strand or multi-layered lines and cables. Insulation can be removed professionally and quickly using appropriate stripping tools.

The length of insulation to be removed varies depending on the terminal point or connector. The amount is set using adjustable limit stops, thereby ensuring consistent stripping lengths. When the insulation is removed, make sure that neither the single wires inside nor the braided shield are damaged.

The remaining insulation must not be damaged by the grip pressure, although pressure points on and color changes in the insulation material are permitted. Further faults that need to be prevented are indicated in DIN IEC 60352-2.

Blade geometries suitable for the application in question are used to process special insulation materials. V blades are used for both hard (e.g., Teflon/Radox®) and soft rubber insulations (silicone). In contrast to the straight blade geometry, V blades cut the insulation all the way round, thereby reducing the tear-off force.

In order to satisfy these requirements, Phoenix Contact offers a wide range of stripping tools for the convenient and safe processing of various conductor, line, and cable types.

Correctly stripped conductor in accordance with DIN IEC 60352-2

Cable stripped incorrectly in accordance with DIN IEC 60352-2

Tightening torque of terminal block screws

DIN EN 60947-1

Table 4 of the standard specifies the tightening torque to demonstrate the mechanical strength of screw connections/ screw terminal blocks.

These torques are sufficient for reliably connecting conductors with Phoenix Contact terminal blocks.

The table opposite lists recommended tightening torques which differ from those in this standard and will ensure gas-tight connections with long-term stability.

Extract from DIN EN 60947-1/ EN 60947-1, Table 4

The IEC/EN torque and the recommended tightening torque for Phoenix Contact terminal blocks are specified.

Air clearances and creepage distances

IEC 60947-7-1 / UL 1059

Carrying out a dimensional check of air clearances and creepage distances verifies that electrical insulation properties are adequate with respect to the following:

- **Application**
- **Expected contamination**
- **Ambient conditions**

The minimum distances are defined in IEC 60947-1 and UL 1059.

The distance is verified by measuring between two adjacent terminal blocks and the support, taking into account the shortest distances.

For the clearance, this means:

The clearance is the shortest distance in the air between two conductive parts. The deciding factors for rating the minimum clearance values are the rated surge voltage and the overvoltage category of the terminal block.

For the creepage distances, this means:

The creepage distance is the shortest distance along the insulating body between

two conductive parts. The deciding factors for determining the minimum creepage distance are the rated voltage, the pollution degree, and the insulation material group of the terminal block.

The minimum values can be taken from the tables of the relevant standards.

IEC 60947-7-1

Phoenix Contact terminal blocks are designed with overvoltage category III and pollution degree 3 with the required distances.

UL 1059

Phoenix Contact terminal blocks are generally designed for a nominal voltage of 600 V in Use Group C.

Detailed information can be found in the data sheets or the catalog documentation.

UL Use Group	Definition	Maximum voltage [V]
A	Operating elements, consoles, and similar devices	150 300 600
B	Conventional devices, including office and electronic data processing equipment, and similar devices	150 300 600
C	Industrial applications, without restrictions	150 300 600
D	Industrial applications, equipment with limited rating	300 600
